

Perform Safe and Effective Pediatric Frenectomies

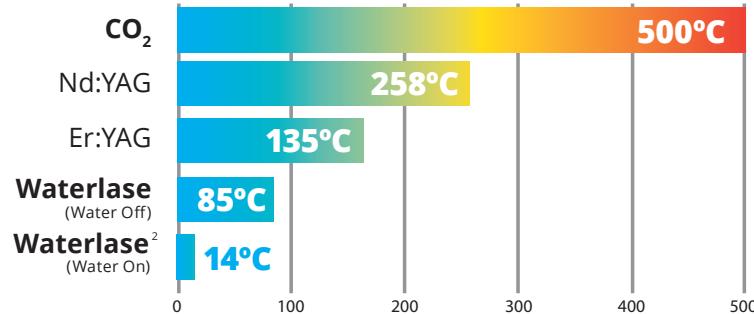

With or Without Water

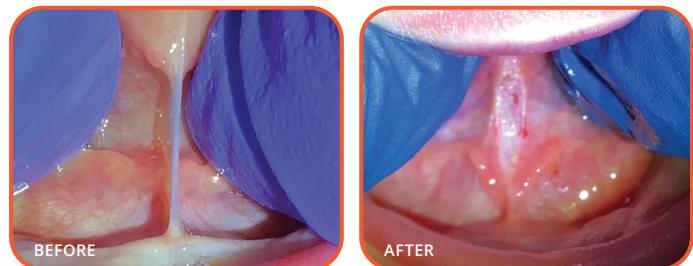

Start performing safe, effective, bladeless and sutureless frenectomies with Waterlase® and improve your patient and parent experiences as well as your bottom line.

Waterlase vs. CO₂

Waterlase produces lower thermal effects — even with the water turned off, CO₂ is over **five times hotter than Waterlase!**¹

Faster recovery times — **Save a Week with Waterlase!**³

"Performing frenectomies on infants is one of the most rewarding procedures I do as a Pediatric Dentist. It is a quick, minimally invasive procedure for both infants and children. The Waterlase laser provides me with a safe, precise incision and the ability to use water or not depending on the procedure and the patient's needs. It has revolutionized how I care for my patients."

Ben Curtis, DDS
Canton, TX
