

Instantly build a NetApp backup and recovery environment to replicate your data offsite.

NetApp as a Service

NetApp Solution

The Ns3i platform enables NetApp users to protect their critical on-premises data by provisioning a NetApp remote backup and recovery environment – instantly! The backup environment can be used as a remote target for replicating data residing on-premises using NetApp’s SnapMirror replication software. Data can be presented via NFS or CIFS for quick and easy recovery.

Our platform simplifies copying, backing up and mirroring critical on-premises data without impacting your production system’s performance, allowing for complete backup and disaster recovery protection as well as handing you full administrative control.

The solution is delivered as a service with no long-term commitments and at an affordable monthly cost. We offer dedicated and multi-tenant options so that your infrastructure can be customized to meet your exact business requirements. Our dynamic bandwidth capacity and pay-as-you-grow pricing enables you to right size your storage allotments to maximize your storage capacity and commitment.

Best of all, no additional software, hardware or capital expenditure is required and, our solution is more cost effective and flexible than building out your own colocation environment.

Business Benefits

The Ns3i platform enables IT Operations to add value to the bottom line of their business by eliminating large capital expenditures on data center infrastructure, while maintaining a high level of service for their internal users by using proven technologies and maintaining total control.

Our platform gives you the flexibility that is not possible with the do-it-yourself approach. You can right size your storage needs and scale your infrastructure as your data grows over time without having to source, rack and cable devices or manage capacity, power and other operational tasks of running a colocation environment. You gain the ability to deploy and align existing IT and capital resources to more strategic areas of your business.

Most importantly, the solution is cost effective and you maintain total control of your infrastructure - the same level of control that you would expect of your own colocation or on-premises IT environment.

Ns3i Overview

Ns3i is the maker of NetCore™, the patent-pending technology that powers our dynamic infrastructure-provisioning platform. Our platform bridges the gap that exists today between the colocation and cloud infrastructure as a service (IaaS) outsourcing models.

By integrating the key benefits of colocation: control, choice and customization, with the instant provisioning and operational expense of cloud IaaS, we are introducing a powerful new outsourcing model that we call: *colo-in-the-cloud*.

Built for IT Operations at mid-sized businesses and business units at large enterprises, our platform is the first complete colocation alternative built for hosting critical business applications where IT Operations maintains total control of the hosted infrastructure.

Getting Started

We offer a free trial program that allows you to quickly build a NetApp remote backup and recovery environment. To request a free trial, contact Ns3i sales at: **1-888-281-9024** or send an email to contact@ns3i.com.

Quick Facts

Q: What versions of OnTap does the solution support?

A: The solution supports both OnTap 7 and 8 modes.

Q: How do I remotely access my remote backup environment?

A: Our platform allows you to connect an existing IPSec VPN or wide area network or you can establish a new connection using a provider of your choice.

Q: Can I try the service before subscribing?

A: Yes, we do offer a free trial for our platform.

Q: How long does it take to provision a NetApp vServer?

A: A NetApp vServer can be provisioned instantly.

Q: How can I secure my remote backup environment?

A: Since we allow you to build your colo-in-the-cloud environment using any virtual or physical equipment, you can layer in any existing security technology to secure your environment.

Q: Does the service require any long-term commitments?

A: Our subscription is available on a monthly as well as annual basis.

Q: Does the service include support?

A: Yes. The service includes 24/7 support from certified NetApp engineers.

Q: What type of administrative access do I have?

A: you get full administrative access to NetApp dedicated FAS and vServer

Q: How do I pay for the service?

A: We accept payments via all major credit cards. For alternative payment options, contact the Ns3i billing department.
