IMPORTANT INFORMATION

Description

TriVisc® is a sterile, viscoelastic non-pyrogenic solution of purified, high molecular weight sodium hyaluronate (average of 850,000 daltons and a range of 620,000 - 1,170,000 daltons) having a pH of 6.8-7.8. Each 2.5 mL of TriVisc® contains 10mg/mL of sodium hyaluronate dissolved in a physiological saline (1.0% solution). The sodium hyaluronate is derived from bacterial fermentation. Sodium hyaluronate is a poly-saccharide containing repeating disacchride units of glucuronic acid and N-acetylglucosamine.

Indications and Usage

TriVisc® is indicated for the treatment of pain in osteoarthritis (OA) of the knee in patients who have failed to respond adequately to conservative non-pharmacologic therapy and simple analgesics, e.g., acetaminophen.

Directions for Use

TriVisc® is administered by intra-articular injection. A treatment cycle consists of three injections given at weekly intervals. Some patients may experience benefit with three injections given at weekly intervals. Injection of subcutaneous lidocaine or similar local anesthetic may be recommended prior to injection of TriVisc®.
