

NUTRA-LIX

working for you!

DOUBLE-FORTIFIED AND CHELATED TRACE MINERALS

To optimize mineral absorption and availability for the six essential trace minerals, Nutra-Lix Solid 12-8 uses two different sources of highly available inorganic and chelated trace minerals. Chelated trace minerals provide a proven source of stable and highly available trace element nutrition.

Chelated trace minerals are simply metal elements that are bound to organic compounds such as amino acids of proteins. Chelation of these essential trace minerals reduces the antagonistic inter actions between minerals, improves stability, improves performance and increases disease resistance.

RESEARCH PROVEN

Since 1987 Nutra-Lix has been committed to consistently develop new and better research-proven products. The formulation of Nutra Lix SOLID 12-8 utilizes university and private, on-ranch research to establish nutrition standards. We provide the best products at an economical price. We share your goal to produce the healthiest, most productive animals with the least cost for feed, labor, equipment and health care.

FEEDING INSTRUCTIONS

Mature cattle should consume between 0.5 and 1.5 pounds of Nutra Lix SOLID 12-8 per day depending upon the weight of the cattle and the availability and quality of other feeds. Regulate consumption by increasing or decreasing the number of barrels available to cattle. Begin supplementation by making one 250-pound barrel available for each 25 head of cattle. Increase or decrease the number of barrels to increase or decrease the consumption. The Nutra Lix SOLID 12-8 barrel should be available to cattle continuously. Place barrels in dry spots near loafing areas, watering locations, crosstrails, dry lots or pastures.

Nutra Lix SOLID 12-8 should be fed with unlimited free-choice roughage of sufficient quality to achieve desired body condition and/or rate of gain. Over-grazed pastures are not adequate for self-feeding. Provide free access to salt and clean fresh water at all times.

WARNING: This feed must be used only in accordance with directions. Excessive consumption could result in adverse toxic reactions. This feed contains high levels of copper and should not be fed to sheep or other species that have a low tolerance to supplemental copper. Not for equine consumption.

WARRANTY: Because of management practices and other conditions beyond seller's control seller makes no expressed or implied warranty other than guaranteed analysis. No agent of Nutra-Lix Inc. is authorized to make other expressed or implied warranties.

**CHELATED & DOUBLE
FORTIFIED MINERALS**

250 POUND PLASTIC BARRELS

NO DEPOSIT-NO RETURN

**FORMULATED FOR OPTIMUM
HERD PERFORMANCE**

Nutra Lix SOLID 12-8 barrel offers concentrated and guaranteed levels of high potency vitamins and trace minerals in a 250 pound sold blend of molasses, proteins, fats, vitamins and trace minerals. It is packaged in a no-deposit plastic barrel. To protect key nutrients, Nutra Lix SOLID 12-8 is manufacturing using a carefully controlled, technically advanced vacuum cooking process. The result is a hard, highly palatable, nutritionally fortified supplement that dissolves slowly as the cows lick the surface. Consumption is controlled naturally by surface area and hardness. It will not crack, shrink or dry out. There is no waste and supplementation is virtually labor free. Cattle have continuous access to essential nutrition that promotes optimum fiber digestion, growth and performance.

- Available 24 hours a day - 7 days a week
- Formulated for the Rocky Mountains and Northern Great Plains
- Greater Utilization of Homegrown Feeds
- Better Herd Health
- Highly Palatable - *Made with more molasses than other barrels*
- Convenient & Economical
- No Waste
- Controlled Consumption - *Consistent hardness from barrel to barrel*
- No Added Salt
- Product Packaged in Self-Feeder
