

HAMMOND & COMPANY

SUSTAINABLE DEVELOPMENT & CONSTRUCTION SERVICES

Broc Croll is Vice President, Senior Estimator, and a long time Project Manager at Hammond & Company. He is a Certified Green Building Professional (*USGBC / Longview 2010*) and has worked in the company since its inception in 1980. He is a master woodworker and studied with the Japanese master craftsman Makoto Imai, training in layout methods, wood selection, tool-use, cabinetmaking and traditional house construction joinery methods.

As Hammond & Company has grown over the last 35 years towards projects of ever greater range and scope, he has worked in many capacities and has developed estimating and cost capture methods that manage the company's work history as a key asset. He is a "master" of Excel and has been a consistent project advisor to our clients, providing thoroughly considered budgets for review and discussion as the projects move from the stage of early project ideas toward ever greater definition and final budgets.

Broc is skilled with estimating and scheduling software, as well as Vectorworks, the computer aided design application we use for project illustration. He has many years of managing a crew and a team of skilled subcontractors and staying ahead of the fast paced decisions needed in the field. He has worked to develop much of the guiding documentation we use to support the project management process.

Alongside all that he has a dry wit and is a gem of a person. He loves wild birds and places. And you should hear him play flamenco guitar!
