

Exploration and Production of Oceanic Natural Gas Hydrate

By M.D. Max & A.H Johnson

Table of contents

PREFACE (8 / 3,387)

CHAPTER 1 ENERGY OVERVIEW: FUTURE FOR NATURAL GAS (35 / 17,052)

- 1.1 Energy, GDP, and Society
- 1.2 The Energy Mix
- 1.3 Matching Power Supply to Demand
- 1.4 Energy Policy in a CO₂ Sensitive Power Future
- 1.5 Strategic Importance of Natural Gas in the New Energy Paradigm
- 1.6 Natural Gas Backstop to Renewable Energy
- References

CHAPTER 2 ECONOMIC CHARACTERISTICS OF DEEPWATER NATURAL GAS HYDRATE (31 / 16,073)

- 2.1 Natural Gas Hydrate
 - 2.1.1 NGH as a Natural Gas Storage Media
 - 2.1.2 Solution Concentration Controls Growth
 - 2.1.2.1 Gas Transport within a Sediment Pile
 - 2.1.3 NGH Stability
 - 2.1.4 The Gas Hydrate Stability Zone
 - 2.1.5 The Seafloor may not be the Top of the GHSZ:
- 2.2 NGH Stability within the GHSZ: Implications for Gas Production Cost
- 2.3 Geology Controls NGH Paragenesis
- 2.4 Production-Oriented Classification of Oceanic NGH
- 2.5 NGH may be the Largest Natural Gas Resource on Earth
- 2.6 NGH in the Spectrum of Conventional and Unconventional Oil and Gas Resources
- 2.7 Low Environmental Risk Character of the NGH Resource
- References

CHAPTER 3 EXPLORATION FOR DEEPWATER NATURAL GAS HYDRATE (54/ 29,608)

- 3.1 NGH Exploration
 - 3.1.1 Deepwater and Ultra-deepwater
 - 3.1.2 Basin modeling
 - 3.1.3 NGH Prospect Zone.

- 3.2 NGH Petroleum System Analysis
 - 3.2.1 NGH and Conventional Hydrocarbon System Analysis
- 3.3 Marine Sediment Host for NGH deposits
- 3.4 NGH Exploration Methods
 - 3.4.1 Seismic Survey & Analysis
 - 3.4.1.1 BSR (Bottom Simulating Reflector)
 - 3.4.2 Ocean Bottom Seismometers
 - 3.4.3 Electromagnetic (EM) Survey
 - 3.4.4. NGH Ground-Truthing: Drilling
 - 3.4.4.1 Picking Drilling Targets
 - 3.4.5 State of NGH Exploration
- 3.6 NGH Exploration Potential: Glacial Period Sea Level Low Stands in the Mediterranean and Black Seas
 - 3.6.1 The Mediterranean Sea
 - 3.6.2 Lowstand in the Black Sea: Sand Transfer to the Slopes
 - 3.6.3 GHSZ and NGH Prospectability in the Mediterranean and Black Seas
- 3.7 National NGH Programs and Company Interest
 - 3.7.1 Exploration Activity in Regions and Countries
- 3.8 Frontier Regions
- References

CHAPTER 4 POTENTIAL HIGH QUALITY RESERVOIR SEDIMENTS IN THE GAS HYDRATE STABILITY ZONE (17 / 8,837)

- 4.1 High Quality Sand Reservoirs on Continental Margin.
- 4.2 Subsided Rift-Related Sediments
- 4.3 Paralic Reservoirs
- 4.4 Aeolian - Sabkha Reservoirs
- 4.5 Sequence Stratigraphy-Related Marine Sequences
- 4.6 High Quality Reservoir Potential in the Mediterranean and Black Seas
- 4.7 Exploration for High Quality ReservoirsReferences

CHAPTER 5 VALUATION OF NGH DEPOSITS (15/ 7,065)

- 5.1 Petrogenesis
 - 5.1 Mineralization Grade
- 5.2 Valuation
 - 5.2.1 Regional Estimates: Shelf or Basin Analysis
 - 5.2.2 Reservoir Analysis
 - 5.2.3 D Body Analysis

- 5.2.4 Cell Analysis
- 5.2.5 Water in the NGH Reservoir
- 5.3 Geophysical Characterization of NGH Deposit Settings
- 5.4 The Creaming Curve
- References

CHAPTER 6 DEEPWATER NATURAL GAS HYDRATE INNOVATION OPPORTUNITIES (19 / 9,395)

- 6.1 NGH Technology Opportunities
- 6.2 Exploration Opportunities
- 6.3 Drilling
 - 6.3.1 Material Requirements
 - 6.3.2 Geotechnical Attributes & Reservoir Stability
 - 6.3.3 Wellbore Stability
 - 6.3.4 Drilling Depths
- 6.4 Production Opportunities
 - 6.4.1 Temperature and Pressure: Production Hazard Potential
 - 6.4.2 Production Containment; Leak-Proof Production from NGH
- 6.5 Operations on the Seafloor
- 6.6 Environmental Security
- 6.7 Lightweight Exploration and Production
- 6.8 Summary of NGH Opportunity Issues and Conclusions
- References

CHAPTER 7 LEVERAGING TECHNOLOGY FOR NGH DEVELOPMENT AND PRODUCTION (41 / 21,509)

- 7.1 The Curve of Technology and Innovation
- 7.2 Moving to the Seafloor: Subsea Industrial Sites
- 7.3 Background Technology Trends
 - 7.3.1 Convergence of AUVs, ROVs and Robotization of Seafloor Industrial Sites
 - 7.3.2 Preparation of Seafloor Industrial Sites
 - 7.3.3 Power Systems.
 - 7.3.4 Data Acquisition and Management
 - 7.3.5 Long Range Communications
 - 7.3.6 Conventional Drilling: Ships and Semisubmersibles
- 7.4 Drilling
 - 7.4.1 Riserless Drilling
 - 7.4.2 Steerable Drilling Systems
 - 7.4.3 Dual Gradient Drilling /Managed Pressure Drilling

- 7.4.4 Seafloor Hydraulic Units
- 7.4.5 Advanced Drilling Tools
- 7.4.6 Narrow Bore and Rigless Drilling
- 7.4.7 Inclined and Horizontal Well Bores
- 7.4.8 Coiled Tube Drilling
- 7.4.9 Multi-Pad and 'Octopus' Drilling
- 7.5 Production Issues
 - 7.5.1 Gas Scrubbing, Separation, and Compression / Artificial Lift
 - 7.5.2 Sand Control
 - 7.5.3 Flow Assurance
 - 7.5.4 Floating Gas Compression and Transport for Stranded Gas
 - 7.5.5 Water Injection/Extraction Pumps
- 7.6 Modularization of Apparatus
- 7.7 Leveraging of Conventional Technology

CHAPTER 8 NEW TECHNOLOGY FOR NGH DEVELOPMENT AND PRODUCTION (40 / 21,120)

- 8.1 New Technology for the Next Step in NGH Development
- 8.2 Exploration
- 8.3 Drilling
 - 8.3.1 NGH Drilling Issues and Objectives
 - 8.3.1.1 Seafloor Worksite for NGH-Specific Drilling
 - 8.3.1.2 Seawater as Drilling Fluid
 - 8.3.2 Active Tethered Drilling
 - 8.3.3 Active Bottom Hole Assemblies
 - 8.3.3.1 Positioning Drilling Units
 - 8.3.3.2 Maneuvering for Super-Directional Drilling
 - 8.3.3.3 Drilling Tools, Wellbore Width Control, and Sidetracks
 - 8.3.3.4 Reservoir and Environs Stability
 - 8.3.4 NGH Well Conventional Casing Options
 - 8.3.5 Active Wellbore Lining
 - 8.3.5.1 Examples of Liner Systems
 - 8.3.5.2 Special Section Liners
 - 8.3.6 Wellbore Geometry
- 8.4 Production Issues
 - 8.4.1 Sand and Sediment Fines Production
 - 8.4.2 Produced Water
 - 8.4.3 Gas / Water Separation
 - 8.4.4 Flow Assurance
 - 8.4.5 Production Risers / Pipelines

- 8.4.6 Communications, Monitoring, and Active Reservoir Control
- 8.5 Well Abandonment
- 8.6 NGH as a Geotechnical Material
- 8.7 Role of Intellectual Property
- 8.8 Technology Readiness Levels (TRL)
- 8.10 Optimizing Leveraged and Innovative Technology for NGH Development
- References

CHAPTER 9 OFFSHORE OPERATIONS AND LOGISTICS (12 / 5,577)

- 9.1. NGH Exploration and Production Operations
- 9.2 Access
- 9.3 Open Oceanic Regions
- 9.4 Arctic Ocean
 - 9.4.1 Arctic Spill Response
- 9.5 Other Frontier Areas
- References

CHAPTER 10 ENERGY RESOURCE RISK FACTORS (47 / 25,324)

- 10.1 Factoring Risk into Development of Energy Resources
- 10.2 Risk Factors of Natural Gas Resource Types
 - 10.2.1 Gas Purity
 - 10.2.2 Sediment Host
 - 10.2.3 Flows Under Own Pressure
 - 10.2.4 Recovery Techniques
 - 10.2.5 Injection of Materials and Water Required
 - 10.2.6 Temperature and Pressure
 - 10.2.7 Impact on Water Resources
 - 10.2.8 Water & Air Quality Risk
 - 10.2.9 Blowout Risk & Atmospheric Greenhouse Feedback Potential
 - 10.2.10 Reservoir and production performance
- 10.3 Risk of Overdependence on Natural Gas
- 10.4 Environmental Risk to Energy Projects and Production
- 10.5 NGH Environmental Risk
 - 10.5.1 Tracking of Ocean Environmental Impact
- 10.6 Geohazards
- 10.7 Risks of Non-NGH Energy Sources
- 10.8 Regulations, Leasing, Tax Matters, and Law
- 10.9 Energy Prices

- 10.10 Business Cycles
- 10.11 Exploration Risk
- 10.12 New Technology Risk
- 10.13 Risk-Cost-Benefit Analysis
- References

CHAPTER 11 ELEMENTS OF COMMERCIALITY (39/ 18,639)

- 11.1 State of the Industry
- 11.2 Conventional and Shale Gas and Oil Dominate Markets
- 11.3 Underlying Economics of the Natural Gas Commodity
- 11.4 Supply, Demand and Natural Gas Resources and Markets
- 11.5 The Emerging World Gas Market
- 11.6 A World Price for Natural Gas
- 11.7 NGH Factors
 - 11.7.1 NGH Conversion Techniques
 - 11.7.2 Production Rates
 - 11.7.3 Permeability in a NGH Concentration and its Significance for NGH Conversion and Gas Production
 - 11.7.3.1 Does Concentrated NGH have Micro-Permeability?
 - 11.7.4 Production Rate Profiles
 - 11.7.4.1 Pressure Management Summary
 - 11.7.5 Infrastructure
 - 11.7.6 Solution for Stranded Gas
- 11.8. How Soon NGH?
- References
