Dear

This is a very short email to let you know about the new prize draw, the previous prize draw, subscriber survey, and advance reader opportunity.

I'm working on a 'proper' newsletter, which I hope to send out next week. In the meantime...

Enjoy!

Best wishes

Terry

Prize draw winner!

The last prize draw was for Reflective Practice. In case you missed it, here's my review of it:

What I've been reading: Reflective Practice.
I'm delighted to announce that the prize was won by Lyn Sweetapple. Congratulations, Lyn!

Lyn said:

"I am thrilled to have won this book and look forward to using reflective writing to redirect my career from the public schools to private industry."

Thanks to everyone else who entered the draw.

Prize draw

This time, you could win a copy of Machine Learning And Human Intelligence, By Rosemary Luckin. I wrote about it here:

Machine Learning and Human Intelligence

Enter by completing the form at the link below. The deadline is midnight (British Summer Time) on 20 July 2018.

Subscriber survey

If you're one of the people who have filled in the Digital Education subscriber survey, thank you!

One respondent said that he or she has been reading my stuff when I first began. Another said they hope the newsletter keeps going for 20 or more years (it's been around for 18 years at the moment). Several people have said they are happy with the newsletter. That's all very nice to know, so thanks for those kind of comments.

The responses so far have been very helpful. Most people like the section called Focus on..., and the book reviews, and there is quite a bit of disagreement about the format the newsletter should take (for example, full articles, links to articles, or something in between).

The aim of the survey is not to target you with personalised advertising or anything like that. In fact, the survey does not ask for your name or
email address. I ask for your country of residence because I should like to ensure that, over several issues, I provide content that is relevant wherever you happen to live. Google forms automatically collects IP addresses, but I delete that column from the spreadsheet.

I've designed the survey to not take up too much time: I doubt it will take you more than five minutes, possibly ten at the most if you decide to give a fulsome response to the ‘Any other comments/ question.

The results of the survey will help me to continue to provide a first class newsletter in these changing times.

Thanks in advance. Here's the link:

Digital Education Subscriber Survey.

Advance Readers

I have finally managed to get back to editing a couple of books, and so if you would like to be a beta reader, please click on the link below.

The role of a beta or advance reader is to point out all the errors I've missed, or to suggest other stuff to include.

The benefits for you of giving me some feedback are not only the warm fuzzy feelings you'll get from helping me out, but also a mention in the Acknowledgements section.

Here's the link if you're interested:

Advance Readers

That's it from me, for now! In the next issue of the newsletter, I'll have another great book to offer in a prize draw, so look out for that.

If you fancy passing on this newsletter to colleagues, please feel free. And if you're reading someone else's copy, why not subscribe in your own right? The link is here:

Digital Education.
Thanks

Terry Freedman
