

Non Surgical Facelift using Ozone - Facial and Body Ozonotherapy - Dr Marcelo Valio MD, Brazil

Agenda and Program

9:00am · Review of the mechanisms of action of Ozone

- Introduction to "CODE" technique - compartmental detachment technique
- Organic response to the mechanical action of controlled ozone infusion
- Multi-plane technique
- Combined with mesotherapy, PDO threads, etc ...
- Capillary treatment with "CODE"- compartmental detachment technique

Treatment of sagging skin with "CODE"- compartmental detachment technique

- Facial treatment with "CODE"- compartmental detachment technique
- Practical technique of "CODE" - compartmental detachment technique

After liposuction treatment with "CODE"- compartmental detachment technique

With this technique you will learn how to optimize your results in ozone therapy cosmetics with an upgrade in the application technique.

Hot and New Topics /Protocols to this Course

Know and respecting the interval between applications depending on the plan accomplished is one of the keys to therapeutic success.

for a good result of a cosmetic ozonotherapy, it should always be distributed in multiplans using also the "CODE" technique

The application in the classic plan aims at the treatment of the fat layer and can be used more frequently.

The application in the plane of detachment, one of its attributions is the retraction of the tissue, interesting the treatment of sagging and can help the reduction of bone resorption.

The application in the meso-ozone plan improves circulation and can be performed at more frequent intervals, depending on each case.

You will learn how to prevent and treat tissue adhesions after liposuction, thereby optimizing the result of liposuction and improving your esthetic outcome.
