Severe aortic stenosis
Right ventricular infarction
Hypotension
NTG Contraindications:
- Hypotension
- Right ventricular infarction
- Severe aortic stenosis
- Marked decrease in arterial pressure within previous 24 hours

Order cardiac CT and medications (H3T 10 am)

- Patient HR > 60 bpm at time of CT
- Proceed with obtaining CTA images

- Normal or nonobstructive CAD
  (Completely patent LAD, LCX, and RCA)

- Unstable (compared to prior cardiac CTA or LNC)

- Moderate to Severe CAD
  (Completely patent LAD and LCX)
  Any outlet > 50% stenosis

- Abnormal
