

Behold Flat Repair Kit Cage

Step-by-step installation instructions

1. Lay the Behold cage on its side. Position the cage so the top bracket (A) is closer to the right end of the cage than the left.

2. Optional Step

Attach a water bottle cage using the supplied screws and lock nuts. Screws must extend slightly past the tightened lock nuts (C) in order to fasten the water bottle cage to the Behold cage securely. If they don't, you'll need to use longer screws than the ones supplied. (Please note: screws that come with the Behold are the correct length for King Cage water bottle cages.)

The preferred mounting location is on the down tube of a bike as shown above

3. Place webbing straps (D) so the unattached button snap straps are facing up from your frame.

4. Attach the Behold to the down tube of your frame using water bottle mounting screws through the Behold's bottom brackets (E).

5. Insert a Kargo bag into the Behold cage. Connect both of the button snaps (F).

Important:

- Never use a Kargo bag unless both straps are snapped to the bag
- Never put anything except a Kargo bag in the Behold cage
- Regularly check that the screws are securely tightened.
