E-liquids

E-liquids may contain traces of chemicals that can cause cancer (i.e. nitrosamines and formaldehyde).\(^2\)

TOXIC in amounts as small as a few drops. Poisoning and even death can occur from drinking, inhaling or absorbing e-liquid through the skin or eyes.

Children exposed to e-liquid can experience vomiting, dangerously high heart rates, breathing problems & even death.\(^1\)

The American Association of Poison Control Centers reported 3,353 exposures from e-cig liquid in 2014, compared to 1,543 in 2013.\(^2\)

Bottles can easily be opened by children who are drawn to the bright colors and flavors.

What’s in an E-Cigarette?
More than just water vapor!

- **Nitrosamines & Formaldehyde**
- **Propylene Glycol**
- **Nicotine & Lead**

E-Cig Dangers

No professional health organization has approved e-cig use. No two e-cigs deliver the same amount of nicotine. No amount of nicotine is safe! \(^2\)

- **Lead**
  Lead increases risk of Miscarriage & Premature Birth.\(^5\)

- **Propylene Glycol**
  Poisonous, potentially lethal liquid used in several brands of e-cigs.\(^2\)

- **Nicotine**
  Most e-cigs deliver nicotine, which is TOXIC to a baby. No amount of nicotine is safe! \(^2\)

What’s in a Cigarette?
These are the most lethal to you and your baby!

**Nicotine & Carbon Monoxide**
Nicotine limits the amount of nutrients baby receives which can slow baby’s growth. It also increases baby’s heart rate & delays brain development. Carbon Monoxide reduces baby’s oxygen supply.¹,²

**Formaldehyde & Arsenic**
Formaldehyde is an embalming fluid known to cause cancer. Arsenic causes cancer & damage to heart & blood vessels. It can also interfere with DNA's ability to repair itself.³,⁴

**Tobacco Specific Nitrosamines**
Damages DNA of exposed adults & babies; linked to lung, oral, liver, pancreatic & esophageal cancers.

**Hydrogen Cyanide**
Used as a chemical weapon; damages heart & blood vessels.³,⁴

**Benzene**
Causes leukemia, genetic damage, birth defects, cancer, & miscarriage.⁴
