

HAMMER Loose Drive Data Erasure PATA / SATA

Quickly and Securely Purges Digital Data on up to 4 PATA / SATA Hard Drives Simultaneously

The hand held Hammer™ is an easy-to-use, one-step device that erases up to four PATA /SATA hard drives simultaneously and prepares them for redeployment. When used as an onsite standalone device, the Hammer is capable of purging digital data up to 4GB / minute - without destroying the drive. The Hammer enables the firmware-based Secure Erase command, which immediately locks down any drive connected to the device.

Once each connected device is erased, the user can configure the system to partition, format and image source data to each of the drives. Audit trails can be printed or stored.

Low Energy, Firmware-Based Device Allows Hard Drives To Be Reused After Erasure

Features:

- Securely erases all data on up to four PATA/SATA hard drives simultaneously
- Meets NIST 800-88 'purge' and 'clear' specifications
- Drives can be easily re-deployed after erasing
- Provides audit trails as certificates of compliance or text record of eradication logs
- GRase - erases sectors on the G-List
- Multi-Language support
- Email Alert - notifies user via e-mail when process starts, stops or at specific time intervals
- CPR Toolbox to extends device functionality

For basic compliance level erasure or sophisticated utilities such as audit tracking, our solutions are designed to improve speed, ease of use and performance while operating in complex enterprise environments.

Other Loose Drive Erasure Solutions from DestructData, Inc.

SCSI Hammer

Up to 28 SCSI drives simultaneously

Cypher 4

4, 8 and 15-drive configurations available

Validator

Independent Data Erasure Verification Tool

The VALIDATOR is a single-purpose device designed to verify drive erasure in a simple PASS/FAIL process. This industry-leading tool is the result of a unique combination of data erasure and forensic analysis expertise.
