

## OUR SERVICES

Implementing analytical tools — whether inside your organization or as part of an outward facing application — is a great way to add value to your business.

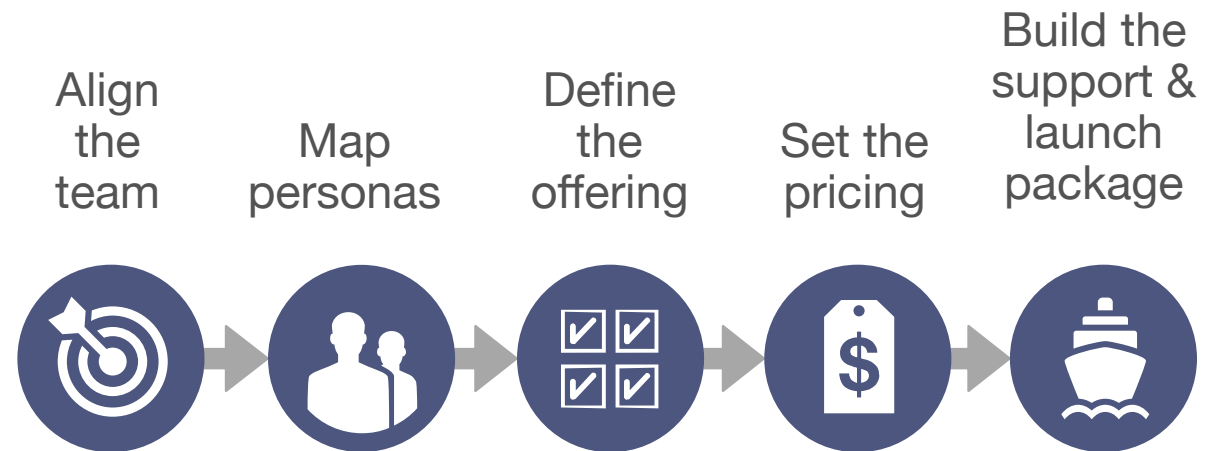

It's also highly visible and a place where you don't want to make mistakes and lose credibility.

NextWave has performed multiple analytics implementation projects and knows how to incorporate GoodData into your overall product vision.

From product strategy to project planning to implementation and beyond, we'll help you get up and running quickly and successfully without the headaches of trying to figure it out as you go.

### Our services include:

- Product strategy
  - Pricing
  - Tiering
  - Roadmap development
- User experience
- Implementation
- Project management

## OUR EXPERIENCE

We've done this before...

- Implemented GoodData as part of a product suite multiple times at different companies (we've been through this before)
- Evaluated fourteen business intelligence vendors across various criteria including implementation, cost of ownership, and user experience (we know why GoodData is your best choice)
- Defined go-to-market strategies including pricing, tiering, standard functionality, and support processes (we've looked beyond the implementation process)
- Developed analytics and business intelligence roadmaps for product offerings from logistics to sales funnel management (we understand how to make GoodData part of your long-term product offering)
