

kisi

— AT A —

GLANCE

How does Kisi work?

Control, secure and unlock your office doors with your smartphone.

Approach your office door with your Kisi authorized phone or device.

Simply open the Kisi app and tap the button to unlock.

Kisi authorizes your key and unlocks the door in a matter of seconds.

What can Kisi do to improve your business?

SAVE TIME

Instantly grant or revoke office access with the click of a button.

INTEGRATE SMART

Easily integrate with your current systems via our open API.

EFFICIENTLY SCALE

As your team grows, Kisi seamlessly grows with you.

STREAMLINE SECURITY

Customize access rights for different groups of employees, cleaning staff, etc.

IMPROVE OPERATIONS

With Kisi, there's no need for cumbersome, manual processes.

IMPRESS VISITORS

Most common thing our customers hear from their visitors:
“ **Wow, that is so cool!** ”

“ I always have my phone in my hand, and to be able to access any room that I want just from my phone is easily my favorite part of Kisi. ”

- Jessica Aflak,
Director of Employee Experience

What does the future of access control systems look like?

Great question. It looks a lot like Kisi.

HARDWARE

German engineered and American made, this is the brain of the Kisi system that can stand alone as its own system or integrate with your existing locks.

DASHBOARD

A simple, easy-to-use design, this is where you can grant or revoke access to your space with the simple click of a button.

APP

This is how your employees will get into the space. The best part? They don't even need to open to app to get in.

Seamlessly control security and access to your business with the click of a button.

Physical keys are over 4,000 years old. That's as old as hieroglyphics, yet somehow we still rely on them to keep our offices secure.

Even key cards and key fobs are an outdated technology that can be easily duplicated and possibly threaten your office's security.

With Kisi, keys to your office live on your employees' smartphones, so you never have to worry about them getting lost or stolen, or not getting returned.

Your employees will love Kisi, too, because it's one less thing for them to remember when running from meeting to meeting or office to office.

They're already connected to their phones 24/7 - simplify their lives by putting their office key on the smartphone that never leaves their side.

Not only will your employees dub you as the office technology hero, but you'll be able to sleep well knowing you've improved your office security, streamlined your operations, and boosted your company culture.

FAQ: WHAT HAPPENS IF MY PHONE DIES OR THE POWER GOES OUT ?

We always install a backup system, so if anything goes wrong, you'll still have access to your space whether it's via a pin pad, physical key, remote unlock, or key card. We work with you to determine the best-fit backup system for your office.
