

MINI CAMPER

Our axes are hand forged from a block of 4142 chrome/moly alloy steel in North Carolina, and heat treated to provide exceptional performance. The 1.25 lb heads are hung on 12 inch straight grained ash or hickory handles, hand carved and sanded from kiln dried lumber. The poll is hardened to be used as a proper hammer. This axe is very similar to our camp axe, but smaller and made without the stepped poll feature. Sheaths are hand made with thick USA vegetable tanned leather. Overbuilt and ready to use. Made 100% in the USA.

"I just received mine today. It is precisely aligned and symmetric, sharpened perfectly, and simply magnificent. Makes my GB, Wetterlings and Council velvicuts look amateur. Carved a birch spoon blank in ten minutes as soon as I held it. I am so stunned on the quality I am thinking about selling all my axes to simplify to the magic of Liam's tools. I have never written a review before. The price of admission is worth it. Dang I wish I'd found his forge site a long time ago!"

— Lou Poehlman, woodworker
