

Using Quantitative Methods in Pragmatics Research

12-14 July 2017
University of East Anglia

Running over two and a half days, the sessions are coordinated by Dr Chi-Hé Elder (University of East Anglia) and Dr Eleni Kapogianni (University of Kent), and will include sessions on corpus pragmatics, questionnaires and reaction times, delivered by Prof Luna Filipovic (University of East Anglia), Dr Christina Kim (University of Kent) and Dr Charlotte Taylor (University of Sussex).

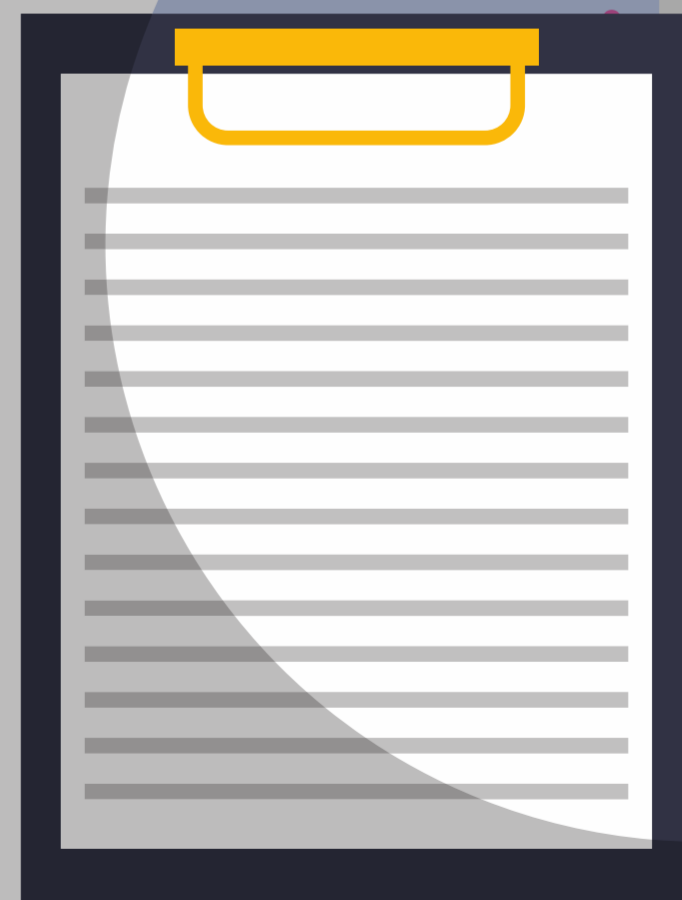

Funding for this event is generously provided by Eastern ARC and the Consortium for Humanities and the Arts South-East England (CHASE).

Pragmatics considers the role of context in the analysis of language, and making observations about language use naturally lends itself to qualitative analysis. Quantitative approaches are less common, despite the fact that richer and more substantive generalisations about language use can be made when they are supported by, for example, frequencies of use or rating judgements from language users.

This workshop provides researchers with an opportunity to:

- develop an understanding of the benefits of quantitative methods in pragmatics research;
- build a toolkit of methods that are applicable to specific research questions in pragmatics;
- gain hands-on experience of conducting statistical tests that are applicable to relevant methods

Hey!
