Keeping Track Online

Since 1944, CCC has engaged colleagues in government, philanthropy, and direct service in data-driven discussions about the needs of children and families in communities throughout New York City and the practical solutions to address those needs. For more than two decades, we have built and managed the most comprehensive database tracking the well-being of the city's children and families, and we make that information available to the public through a free online tool called Keeping Track Online.

Visit data.cccnewyork.org to explore data on hundreds of indicators of child well-being. See where risks to child well-being concentrate, and map community assets to find out where children and families have access to key services and resources and where they do not.

Key Features of the Site

Explore Data and Create Location Profiles: Select from hundreds of indicators across a wide range of issue areas; have the data displayed in maps, table, and charts; see trends in data going back over a decade; select a specific location to simultaneously see multiple indicators for one area of interest.

Rank Communities by Risk: See where risks to child well-being concentrate along six domains of well-being (Economic Security, Housing, Health, Education, Youth, Family & Community); look at specific risk ranking indicator data to better understand the factors driving high risk levels in specific districts; see whether risk factors have changed over time.

Map community resources: Overlay community assets onto maps showing risk level and other indicator data; discover areas where families may not have access to the services and supports that help them overcome barriers to well-being, such as banks, housing support services, emergency food shelters, and childcare services.
