

DRS™ NOVA v4

Another Step Forward in Digital Film Restoration

DRS™NOVA is a full suite of automated and manual tools to fix everything from common dirt and scratches to catastrophic tears and warps. MTI Film has spent over 20 years perfecting our application to include powerful tools that work the way restorations artists want - simply and efficiently.

Project Management

Powerful tools to manage your project and media

DRS™ - Improved

The original unique digital film restoration algorithm fixes dust, debris, scratches, tears and more

DRS™ Color Bump

Fix laboratory printer mis-lites with a single swipe

DRS™ Replace - New

Create up to 3 frames from adjoining frames

DRS™ Color - New

Ability to change color of fix created in DRS™ tool

Stabilize - New

Stabilize images automatically with a single button click. Or, manually apply tracking points to fix jitter, gate weave and splice bumps.

Dewarp

Repair geometric distortions

Performance - Improved

DPX, TIFF & EXR playback performance

Scratch

Repair fleeting and persistent scratches

Paint

The Paint tool offers versatility for manual fixes from dust and debris to film tears and gate hairs

Paint Restore - New

Paint from one clip to another to restore original values.

Deflicker - New

Eliminate zonal flicker with a simple to use interface

Color Breathing

Reduce density and color shifts to eliminate color breathing and density flicker due to film emulsion fading

Split Screen Mode - New

Compare two different clips with a split screen controlled by mouse gesture

Mask - Improved

New visual feedback for border width and position

AutoFilter

Automatically detect and repair dust and defects

Grain - Reduce

Smooth out grainy or noisy images

Grain - Create

Create custom grain patterns and apply selectively or universally across a range of frames

ImageFilter

Apply aperture correction or blurring

3 Layer Registration

Realign mis-registered RGB layers, including individual channel warping

Version Export - New

Export modified version files created from source files including all modified and non modified source frames, thereby preserving original source frames
