

STAY UP TO DATE AND **BREATHE** **EASY** WITH A SAFE AND SECURE DATA ENVIRONMENT

Platform-as-a-Service provides you with access to a Database and Middleware platform without the worry of purchasing all the associated hardware and software. Your company's information is safe, secure, and available for your use at all times. All the behind-the-scenes services and regular upgrades will happen automatically so you're always current.

WHAT DO I GET?

- A secure, managed Database and Middleware platform that's always up to date
- Backup and recovery, security, patching, upgrades, space management and 24/7 monitoring and code promotions
- Database cloning services for products like SQL Server, Oracle, DB2, and MySQL
- Web-enablement using products like WebSphere Application Server, Oracle Application Server, Weblogic, and Apache Tomcat
- A roadmap and recommendations resulting from a review of your current environment, processes and procedures
- Development and maintenance of logical and physical data models, data rules, standard naming conventions and coding best practices

WHY SHOULD I CARE?

- Eliminate worry about environment outages or security breaches
- Fully auditable environment reflecting your security policies with additional recommended security practices included
- Ease the staffing crunch with access to the experts—the ISM team maintains personnel skilled on each platform so you don't have to
- Stop purchases and management of platform-associated hardware and software
- Replace troubleshooting with ISM's built-in 24/7 support
- Automatic or planned software upgrades keep you current
