

Big Smiles for New Thomson Dental Centre

Thomson Medical have expanded its clinical portfolio of specialty services with the opening of Thomson Dental Centre (TDC) at Novena Specialist Center in January 2012. With a team of qualified and experienced dental professionals, TDC provides a comprehensive range of dental services, ranging from basic services such as scaling and polishing, to more advanced care such as teeth whitening, fitting of braces and implant surgery.

Our Menu of Treatments

General Dentistry

- **Scaling and Polishing** of your teeth improves oral health by removing plaque and tartar from the teeth. Surface stains caused by foods such as coffee, tea, and red wine are also removed.
- **Dental Restoration** is a restorative dentistry treatment in which a dental material is used to repair minimal tooth fractures, tooth decay or otherwise damaged surfaces of the teeth.
- **Crowns** are used to protect teeth which have moderate to severe decay, or are cracked, and restore them to function while **Bridges** are used to replace missing teeth.
- **Children's Dentistry** encompasses comprehensive dental care for children from infancy through adolescence. A thorough examination is done to evaluate the health of your child's teeth, gums and mouth together with your child's growth and development, to make sure your child's oral development is on track. The focus is on preventive care.
- **Periodontal (Gum) treatment.** There are a variety of treatments for gum disease depending on the stage of disease, how the patient may have responded to earlier treatments, and overall health.
- **Root Canal Treatment & Surgery** are performed by our doctors when the nerve of the tooth becomes infected or is badly damaged. During the procedure, the diseased or damaged nerve of the tooth is removed and the root canal is cleaned, disinfected and sealed, allowing the tooth to be saved.
- **Dentures** are removable and are used to replace missing teeth in the mouth. They can be made from a plastic material (acrylic), or a combination of plastic and metal (cobalt chromium) materials.
- **Wisdom Tooth Extraction** is necessary if the wisdom tooth is stuck (impacted) at the back of the mouth and is difficult to clean, resulting in swelling, pain or tooth decay due to infection.

Aesthetic Dentistry

- **Teeth Whitening** is the most popular cosmetic procedure in the world today. The procedure can remove organic stains or intrinsic tooth discolouration primarily caused by consumption of certain foods (notably tea, coffee, and red wine) and tobacco use.
- **Porcelain Veneers** are a beautiful way to correct stained, chipped or crooked teeth. By placing a customised, thin, glass-like ceramic porcelain on the surface of the teeth, we can provide patients with bright, straight and natural looking smiles.
- **Composite Bonding** is among the least expensive of cosmetic dental procedures. Unlike veneers and crowns it can usually be done in one session.

Specialist Dentistry

- **Multi-disciplinary Specialist Care** is available where a patient that requires complex work benefits from a treatment plan involving different specialists working together in a single setting.
- **Orthodontic Care (Braces)** is the discipline in dentistry that treats not only teeth alignment and jaw relationships, but also manages skeletal and dental development in a growing child.
- **Advanced Restorative Care** is a branch of dentistry that deals with the replacement of missing teeth and related mouth or jaw structures by bridges, dentures, or other artificial devices.
- **Oral & Maxillofacial Surgery** encompasses a wide range of surgical dental treatments. The most well known are perhaps wisdom teeth removal and placement of dental implants.
- **Minimally-Invasive Dentistry** allows dentists to perform the least amount of dentistry needed while never removing more of the tooth structure than is required to restore teeth to their normal condition.
- **Implant Dentistry** is an advanced technology procedure involving the replacement of artificial tooth to treat tooth loss.

In-Centre Laboratory Services

- **CEREC 3D and ZIRCONIA Restorations** is one of the latest technologies in dentistry. Our in-centre laboratory combines the technology of CEREC 3D with the expertise of our skilled technicians, allowing us to provide patients with painstakingly designed and precision milled all ceramic restorations within a single day.
- **Customised Implant Restorations** are provided using CEREC 3D technology at our in-centre laboratory. This not only improves aesthetic outcomes for dental implant treatment, but also decreases the waiting time for patients.
- **Mouth-guards** are prescribed for those suffering from bruxism (habit of grinding or clenching teeth). These are custom-made and fit over either the upper or lower teeth, preventing the upper and lower teeth from touching. Worn at night while sleeping, or during stressful periods in the day, mouth-guards protect your teeth, and prevent them from wearing down.

Call us for an appointment

Thomson Dental Centre (TDC) is located at
 8 Sinaran Drive #07-08/16-19
 Novena Specialist Center, Singapore 307470
 Tel: (65) 6255 0770
