Rx DSCSA RECALL LAB

DEFINITION

Compliance with the Drug Supply Chain Security Act (DSCSA) continues to evolve and trading partners are now beginning to see serialized product enter the supply chain. With improved abilities to trace the product back to the manufacturer, how can these new capabilities affect and benefit the overall recall process?

This Lab will explore how to use DSCSA information in the form of GS1's Electronic Product Code Information Services (EPCIS) standard to transmit recall information more effectively and efficiently.

The Lab will focus on:

- Understanding the documentation requirements of the recall process.
- Identifying the fewest attributes necessary to alert trading partners of recall.
- Identifying alternative scenarios that participants would like to test.
- Identifying a set of metrics to compare alternative scenarios.
- Building a simulated model to exercise and demonstrate the scenarios.
- Developing a whitepaper documenting the findings of the Lab.
