

What I Know... as of Today...

By Gary Greenfield

www.greenfieldnaturals.com

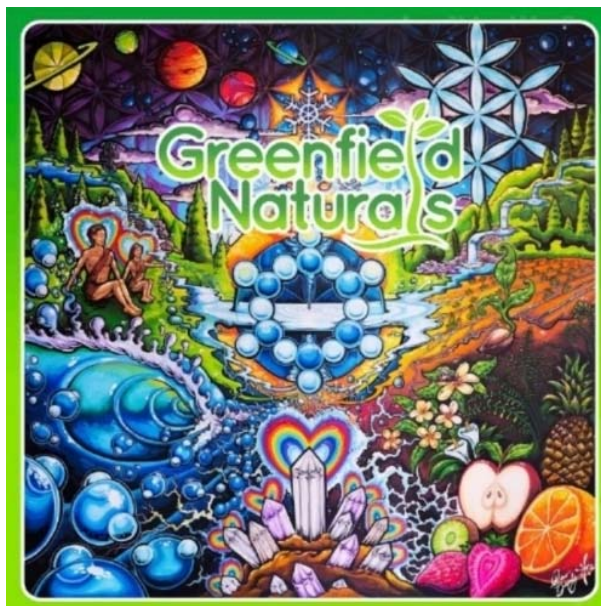

NOTE: There are often references in this article to “the Harmonizer”. We have since replaced that product with the “Personal” Hydro Energiser. All of the products discussed in this booklet use the same minerals and operate on the same principles.

“The majority believes that everything hard to comprehend must be very profound. This is incorrect. What is hard to understand is what is immature, unclear and often false. The highest wisdom is simple and passes through the brain directly into the heart.”

— Viktor Schauberger, Visionary & Inventor

INTRODUCTION

This booklet has been compiled to provide you with a basic education regarding the principles and theories that guided us in the development of the Greenfield Naturals Harmonizer and Hydro Energiser products. We will examine the field of energetics and evidence which supports the reality of information transfer and vortices, the natural processes which work to sustain life.

We start with the premise that we exist in a sea of energies which are all around us and permeate everything. We can also define these energies as light, information, electromagnetic frequency or EMF. They are free and they are good for us, that is, so long as they are emanating from natural sources or sources that mimic nature.

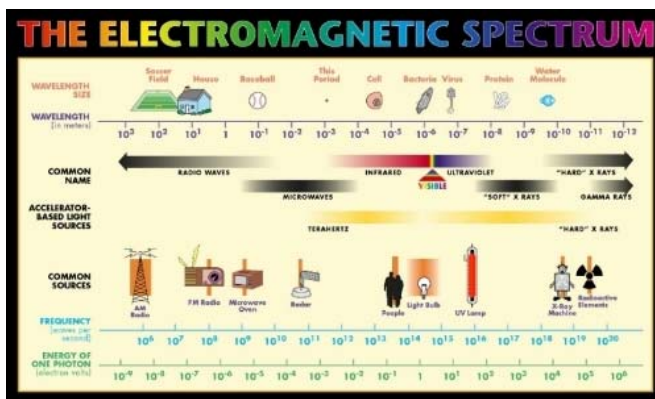

The most obvious source of this energy is the sun and less obvious are minerals, of which there are over 4,000, which also emit light energy. These minerals as well as spring water, essential plants oils, and even natural sounds from birds chirping to wave crashing upon the sands can be harnessed for the enhancement of health for plants, animals, peoples and the environment.

Just as the periodic table lists all the elements known to man, the electromagnetic spectrum shows the range of all possible frequencies of electromagnetic radiation. Only a very minute section of the electromagnetic spectrum are visible energies of which we are most aware while the vast majority of nature's life enhancing energies are not visible to the human eye.

In the following paragraphs, we will be discussing objective, discernible and visible evidence created by these energies which are the most part invisible.

Conventional science generally doesn't use EMF in its natural state which is a reflection of their ignorance and disrespect regarding the importance of emerging yet also ancient technologies which are congruent and harmonious with nature. Natural EMF is free and difficult to monopolize or control. Our academic and scientific institutions are controlled by big corporations which are primarily interested in the procurement and monopolization of resources for the sake of generating as much profit as possible with minimal consideration for the common good. Consequently, governments and mega corporations have gone to great lengths to hinder and limit opportunities for research, development and marketing of free energy technologies based on natural EMF and this is especially so in America.

Nikola Tesla, the most influential and prolific inventor of the modern times developed wireless communication, AC electricity, lights, x-rays, remote control, robotics, lasers, electric motors and most interesting of all, free energy. His only inventions not being used today are his free energy technologies and they have yet to see the light of day because the industrialists who funded his work along with the US government either destroyed his work or placed it under lock and key.

Tesla has been an inspiration to us in our research but the products we are creating are infinitely more simple than the genius manifested in the technologies developed by Tesla. Inspired by men such as Tesla and Schauberger, we are creating products that take advantage of energy which is all around us and easily harnessed. Through traveling the world and doing our own research, we've discovered natural phenomena which we build into our products to make them unique, remarkable, economical, powerful and long lasting.

It is interesting to note that natural sources of electromagnetic frequencies, (other than on occasion the sun) are not displayed on EMF spectrum charts.

PHYSICAL VERSUS ENERGY

Conventional science and thinking in many respects revolve around the physical. It is perfectly normal to work with what we see and more difficult to wrap our heads around something we can't see with our own eyes. But innovative and intuitive thinkers have been giving us clues throughout history regarding the invisible qualities of light and matter.

"If you want to find the secrets of the universe, think in terms of energy, frequency and vibration."

- Nikola Tesla, 1856 - 1943

“Water is the lifeblood of the earth. When water is healthy, it has a complex structure that enables it to communicate information, carry energy, nutrients and healing, to self-cleanse and discharge wastes.”

- Viktor Schauberger, Forester, Naturalist and Water Visionary 1885-1958

RECIPE FOR THE UNIVERSE

“In the beginning God created the heavens and the earth. The earth was without form, and void; and darkness was on the face of the deep. And the Spirit of God was hovering over the face of the waters. Then God said, “Let there be light”; and there was light.”

—Book of Genesis, 1400 BC

Ancient Eastern Orthodox Creation Icon

Drawing from this text written approximately 3500 years ago by the Hebrew prophet, Moses, we can conclude that the ancients understood matter or water and energy or light to be separate entities, both of which could not be made known without the presence of the other. Without light, the water was dark, void and still.

Energy is essentially light, seen and unseen, audible and silent while continually being measured by our subconscious working with all our senses. Matter is essentially water, manifest in various configurations and densities using the hydrogen atom as the basic building block to construct all the elements which comprise all matter in creation. Light illumines, animates and informs of us of water and its infinite array of material forms and matter reveals lights qualities to us.

The first element of the periodic table is hydrogen. ‘Hydro’ is defined as ‘water’ and ‘gen’ is defined as ‘in the beginning’. So, essentially, the element, hydrogen is ‘water in the beginning’ and it is the hydrogen atom from which all other elements are built. Consequently, hydrogen, ‘water in the beginning’, is the building block for all material forms in the universe. This is a concept first revealed to us from the ancient Book of Genesis quoted above. The Greeks gave us the word, ‘hydrogen’ which was translated from the Hebrew texts around 150 BC.

■ hydrogen ■ poor metals
■ alkali metals □ nonmetals
■ alkali earth metals ■ noble gases
■ transition metals ■ rare earth metals

Seawater contains all ninety-two of the naturally occurring elements of the periodic table and these elements alone are the source for all the material used to create the heavens and earth. All matter, from which everything, (inorganic and organic), draws its form, was contained within the primordial waters created by God in the beginning and it is from these waters that He brought forth the land masses. It is also from these waters that He created plants, animals, birds, sea life and microbes. Lastly, He created mankind in His own image. These conclusions were drawn primarily from the passage below with the rest of the first chapter of Genesis providing further support material.

“Then God said, “Let the waters under the heavens be gathered together into one place, and let the dry land appear”; and it was so. And God called the dry land Earth, and the gathering together of the waters He called Seas.”

— Book of Genesis 1:9-10

HYDROGEN - THE BUILDING BLOCK FOR ALL ELEMENTS?

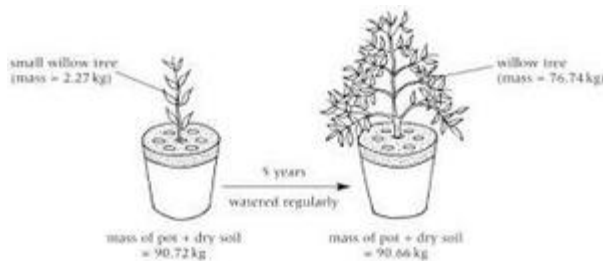

The Founder of Natural Philosophy, Thales of Miletus, Hypothesized That Water Was the Beginning of All Material Forms

The ancient Greek philosopher Thales was born and lived around (624-546 BC) in Miletus in Greek Ionia. Aristotle, the major source for Thales’s philosophy and science, identified Thales as the first Greek to investigate the basic principles, the question of the originating substances of matter and also regarded, Thales, as the founder of the school of natural philosophy. Aristotle reported Thales’ hypothesis that water was the originating principle of nature. Plato regarded Thales to be numbered as one of the seven wise men of Greek culture. There is no indication that Thales wrote anything while his views seemed to have been passed down orally.

Van Helmont’s Tree Experiment – Can Anything Be Constructed Out of Hydrogen?

Jean Baptista van Helmont (1577-1644) performed one of the classic experiments in plant physiology. His research was published posthumously in *Ortus Medicinae* (in 1648) and is one of the first examples of the use of the “scientific method”.

“I took an earthen pot and in it placed 200 pounds of earth which had been dried out in an oven. This I moistened with rain water, and in it planted a shoot of willow which weighed five pounds. When five years had passed the tree which grew from it weighed 169 pounds and three ounces. The earthen pot was wetted whenever it was necessary with rain or distilled water only. It was very large, and was sunk in the ground, and had a tin plated iron lid with many holes punched in it, which covered the edge of the pot to keep air-borne dust from mixing with the earth. I did not keep track of the weight of the leaves which fell in each of the four autumns. Finally, I dried out the earth in the pot once more, and found the same 200 pounds, less about 2 ounces. Thus, 164 pounds of wood, bark, and roots had arisen from water alone.” Jean Baptista van Helmont

We can deduct from this experiment that as water mingles with the soil, it picks up the EMF signature of each mineral and carries that information into the plant which with its pre-programed intelligence uses the soil EMF codes and the hydrogen atom to build its wood, bark, roots, leaves, etc.

Prout's Hypothesis - The Hydrogen Atom Is the Building Block for All the Element

William Prout (1785–1850) was an English chemist, physician, and natural theologian. He is remembered today mainly for what is called Prout's hypothesis which stated that the hydrogen atom was the building block for all the elements. Prout's theory motivated fellow scientists of his era to obtain ever more accurate weights for each atom in their quest to prove whether his hypothesis was correct.

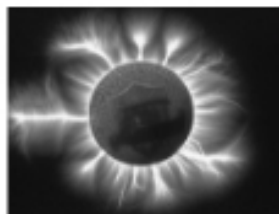

Intelligent Design Theory of the Periodic Table

Bob Laing is a controversial modern day scientist who has contributed interesting insight into many perplexities of the universe in which we live. He is listed here because of his contribution to proving the unique structure of the hydrogen atom and the role it plays as the building block for all elements of the periodic table. Bob constructed physical models of the hydrogen atom and then proceeded to build many elements of the periodic table using his hydrogen building blocks.

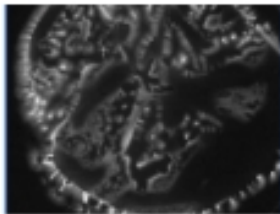

Bob also developed his own theory regarding the construction of the hydrogen atom. “Intelligent Design Theory uses nuclear physics to establish the true structure of a hydrogen atom.

“What I call the hydrogen atom model H2 is composed of two protons attracted to a single electron. This leaves one extra positive charge that is neutralized by an electron attempting to join the center electron between the two protons. The outer electron is repelled by the central electron and always remains outside the two protons, where it vibrates due external electromagnetic waves.” Bob Laing

Leaf

Rose Quartz

All matter, regardless of its composition emits energy. Just as a fish is surrounded by water, everything, everywhere is surrounded and permeated by a sea of energy, including all food sources, trees, rocks, water and air.

So these pictures beg the question, how much natural energy are you ingesting from your diet or from the water you drink? What kind of energy surrounds you? Why is it that spending time in nature invigorates you? Have you ever wondered why food tastes better when prepared over an open fire in the woods? All energy in its natural state, no matter what its source will work to enhance quality of life for everything within its field of influence.

Processed foods on the other hand will transmit corrupted light frequencies, yet we gravitate towards them because of sophisticated marketing schemes and addictive chemical food additives. Utility treated water transmits toxic light frequencies and bottled waters can vary widely in their quality of energy emissions. So, this begs another question, what is pure water?

Pure water isn't water that has been stripped of all its minerals via reverse osmosis or distillation nor is water pure if it contains toxic energies that can't be seen or even quantified by most instrumentation or testing methods.

“Pure water can be defined as water in it's natural, balanced state, both energetically and materially, yet, cleansed of matter and energy that isn't congruent with nature.”

What we can conclude from the images above and other images we have captured by electrophotonic photography, is that all material forms emit energy and furthermore, through additional field research, we have concluded that all energy or light or electromagnetic frequency or information, whatever you prefer to call it depending on its source is either beneficial or detrimental to the health of plants, animals and peoples. Energetic emissions are created by all material forms and if these energies are synthetic, man-made or altered from their natural state they will interfere with life processes within their field of influence.

Mankind is intimately connected to the earth, even the name 'human' comes from the Latin word 'humus' meaning, dirt, soil, earth, ground. The human body is composed of all ninety-two naturally occurring elements of the periodic table just as is the rest of nature and the reason why we're so invigorated by spending time outdoors and even more so in the woods or at the beach is because our body is at home in the midst of all the natural energies that abound in these places as opposed to the abundance of unnatural energies present in our homes and communities. Our bodies resonate with the same energies of the universe and any energy source that doesn't resonate with the energies of nature and the universe create conflict, disease, lack of peace and disharmony.

Consequently, when we eat food grown and processed contrary to natural law, we do so not only to our own demise but also to everything within our field of influence. So what we eat and the environment we live in can be hurting us or healing us and each of us to some extent has the power to choose the energetic qualities of the environment we are going to live in and the foods we are going to consume.

Now we aren't suggesting you sleep on a bed of carrots or that you buy a house in the country, as laying on a bed of carrots would be extreme and buying a house in the country is not possible for most people. In spite of the conveniences, our modern technological system has brought to the world, every living thing on our planet is losing quality of life because our modern belief system is out of sync with nature and consequently our modern technologies are out of sync with nature. The modern lifestyle isn't sustainable and the I would go so far as to say that the consequences of the modern lifestyle are creating a scenario that will bring a degree of suffering on our children's generation never before known by mankind.

The kind of energies with which we surround ourselves will have an influence on our quality of life and even though we may not be able to avoid exposure to many of the toxic energies surrounding us, we can negate or minimize their effects by learning to think and live in a manner that is not controlled by the mainstream forces of media, health, banking, business, education, energy, technology and government.

FREQUENCY AND INFORMATION

Frequencies are a manifestation of waveform and they convey information. Voice and music frequencies convey information wirelessly. Digital signals convey information wirelessly. All materials forms possess a frequency signature or signatures by which they communicate with everything else in creation. Understanding this principle is crucial to understanding how nature works and when we respect this principle, we are able to create products that are harmonious with nature but when we are ignorant of this principle, we end up creating disharmony.

For instance, nuclear physicists and engineers are very smart people and they are able to extract amazing quantities of energy from rocks but unfortunately they accomplish this task in a manner that isn't respectful or congruent with nature. The end result being that they create technologies and products wrought with dangers because of frequency corruption and the creation of malformation instead of harnessing information in its natural state.

There is a considerable body of evidence confirming that water collects, stores and transmits information much like a computer receives, stores and transmits information. Japanese author and researcher, Masaru Emoto, was a water researcher whose work with human consciousness, (which is essentially EMF energy), made him famous. He would freeze water which had been subjected to energetic stimuli such as rock music, classical music, kind words and harsh words to determine their effects on the crystalline structure of water.

Water in a natural state reveals a crystalline structure, whereas polluted water reveals a chaotic state. Photos from Emoto's lab.

We have begun to lay the groundwork for you, establishing that all material forms emit energy and this energy can be described as electromagnetic in nature. Consequently, even our thoughts are electromagnetic in their composition and because of free will, we can cause our consciousness to emanate life enhancing energy or life depleting energy. What this means ultimately, is that each of us are electromagnetic generators, even mini power stations that are constantly sending out beneficial or detrimental energy based on our disposition and our grasp of truth. This puts a new perspective on how each of us can change not only ourselves but those around us including our environment by the power of speech, the power of prayer and by the power of the written word!

Consider this concept for a moment. The written word that resides on a sheet of paper or in digital form on your computer or cellphone screen contains the consciousness of a man in a static form until it is read. The act of reading is accomplished through electromagnetic energies that are emitted through the eyes. As these ocular energies strike the text on the page or screen, these energies reflect back through our eyes into our brain to be deciphered. Based on the principles of 'form, frequency & function', the brain in turn acts a repository or an energy sink from which the rest of body draws these energetic nuggets or bits as needed.

Now whether or not these energetic nuggets or bits are composed of gold or dung or something in between is determined by the collective formation of the posted text which defines its function and ultimately it's frequency which may or may not be congruent with natural principles.

“The principle of, ‘form, frequency, function’, governs all energetic process at all times in all places.”

Describing a musical instrument, (without considering the musician), can give a clearer picture of how this process works. Consider the function of a violin which is to emanate beautiful sound using properly configured wood and strings. The form of the wood and strings of the violin in turn will determine the quality of the frequency emanating from the violin which in turn will inspire the heart, causing one to cringe or to be inspired or something in between.

Ultimately, the frequency emanation or transmission of an object or material form contains the information which is gleaned by our cells as a source of energy for proper cellular functioning and water in its multitude of configurations and densities is the receiver, repository and transmitter of all information.

TURKEY TRIALS

In Platte, South Dakota, between 2010 and 2013, when I was working with Jeffrey Riggins, we conducted trials which indicated that information is stored and conveyed in water. In one trial, using a facility with two separated brooding barns, young turkeys were hydrated with a water structuring unit without a mineral jacket on one side of the barn and young turkeys on the other side of the barn were watered with a water structuring unit surrounded by a mineral jacket. Each side of the barn was identical but separated by a wall. The young turkeys feeding on the structured water exposed to the mineral blanket, (which didn't have contact with the water), had a decreased mortality rate and enhanced growth as compared with the turkeys being watered with structured water less the mineral blanket.

In an earlier trial, young turkeys fed structured water had less mortality and better weight gain than young turkeys fed untreated well water. These trials opened up a whole new field of focus and since those initial trials we've repeatedly seen evidence that information can be transferred wirelessly to water, stored within the water and in turn transmitted to other aqueous environments within its field of influence, be they turkeys, plants, humans, a pond or the soil.

CORRUPT EMF (ELECTROMAGNETIC FREQUENCIES)

Commensurate with the expansion of wireless communication technologies are the number of individuals who are suffering from exposure to these invisible electromagnetic frequencies emitted by the multiple sources of wireless communication technologies that have inundated our homes, schools and communities. Sources of harmful EMF can include improperly installed AC electrical circuits, Smart Meters on the outside walls of our homes used to communicate information to the electric company, cell towers, cell phones, digital clocks next to our beds, wireless phones, computers and WiFi routers which are used everywhere in stores, schools, homes and in public spaces.

Nothing in nature was designed to live in an environment saturated with all these synthetic, man-made, unnatural electromagnetic energies. The problem with all these unnatural energies is that they interrupt, interfere and inundate our cells with corrupt energies which in turn affect healthy cell activity and when our cells ain't happy, ain't nobody happy.

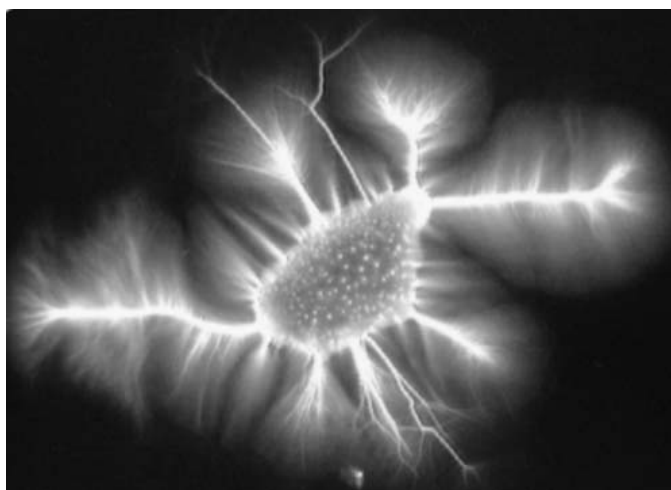

A symptom of all diseases can be described as a lack of ease or peace among cells. The fuel source for cellular function is energy which is electromagnetic in its makeup. Depending on the source, electromagnetic energies can either enhance or disrupt cellular activity. Disease types are defined by the types of cells which aren't at ease or are functioning inefficiently. Consequently, any electromagnetic energies not congruent with nature will interrupt normal cell functions resulting in any one of a multitude of diseases and illnesses that plague mankind.

In consideration of this concept, one can understand why oftentimes, the source or cause of a particular disease can remain a mystery. So, the key to good health is to first learn the difference between natural and unnatural energies and then begin to eliminate the unnatural energies from our lives while increasing exposure to natural energies.

THE NATURAL LIGHT EMISSION OF ELEMENTS

Everything in creation is comprised of one or more of the ninety-two naturally occurring elements listed on the periodic table. Each of these ninety-two elements has their own unique electromagnetic energy emanation and each of these energies has a unique role to play in the support and sustenance of life on our planet. The purpose of the physical elemental form and the millions of other forms which are comprised of elements is to interact with light or energy which surrounds it. The unique energy signature created by the interaction of light with matter is then wirelessly picked up by the specific cells which require that particular frequency for fulfilling its role for life functions within its environment. This process is a manifestation of the 'form, frequency, function', principle.

This is an image of a grain of sea salt taken with our electrophotonic imaging camera manifesting the principle of, "Form, Function, Frequency"

All naturally occurring electromagnetic energies are subtle in energy yet working powerfully to clean, feed and protect whatever is exposed to their field of influence. These naturally occurring energies can do no harm and have been endowed with intelligence from our Creator to know exactly what their role is in sustaining the proper functioning of all living forms on earth.

HERXHEIMERS AND FREQUENCY SENSITIVITY

The Herxheimer Reaction is a pronounced detoxification or cleansing process which takes place in the body as it becomes exposed to particular types of especially effective cleansing, feeding and protecting energies which occur in nature.

The cleansing actions of a Herxheimer Reaction may persist from a few days to a month and although the cleansing period may be unpleasant and prolonged, quality of life will be enhanced once the body has completed the cleansing process. As toxins are being released for expelling from your body, it is very important to drink plenty of energized, informational, structured water to assist with the flushing process. Typical symptoms which may accompany this cleansing process are body aches, sore throat, general malaise, an upset stomach, sweating, chills, nausea, itching, rashes and a runny nose.

OUR BODIES LOVE US!

Our Creator gave us bodies that love us in that just as a Mother's love motivates her to clean, feed and protect her children, so our bodies work to clean, feed and protect us but when we don't cooperate with or listen to our bodies, problems will begin to occur just as in any relationship. Communication is paramount to good relations with those around us including our own bodies, therefore, we need to learn to listen to our bodies, responding appropriately to our body's needs,

otherwise we'll experience problems and the longer we neglect our body's needs or cry for help, the more our health is going to suffer.

The bottom line is that good health isn't possible unless we have a good relationship with our body. As in any relationship, trust is paramount and we need to exercise confidence that our body knows perfectly how to care for us; cleaning, feeding and protecting us but in turn, if we aren't in tune with our bodies or we are negligent or are just plain ignorant, then we are going to end up hindering our body's ability to properly clean, feed and protect our cells. Why don't we naturally know how to take care of our bodies as they take care of us? Because we live in a world filled with deceptions, distortions, distractions and delusions which all work to lead us astray.

THE MODERN WORLD IS NATURE'S ENEMY

Why is it that 99% of the food in our neighborhood grocery stores is laden with chemicals, genetically modified, hybridized or grown in a manner that results in nutritional deficiency? Why is it that the Grocery Manufacturers Association spends tens of millions of dollars every year on lobbying efforts and media advertising to keep us from knowing the truth about GMO's and the presence of other chemicals in the foods that fill the shelves and fridges of our local grocery stores?

Why is it that most all of the pharmaceuticals prescribed by your doctor are toxic, manifesting detrimental side effects? What happened to the Hippocratic Oath which states, "I will keep my patients from harm and injustice. I will neither give a deadly drug, nor will I use the knife..." The ancient Greeks knew the power of nature to heal and the power of natural energies to do the work that is now done by the scalpel, toxic chemicals and radiation.

Why is it that the cellular communications industry along with the computer industry are knowingly manufacturing products and promoting technologies that generate toxic frequencies which are now having a major impact on our children's health and the health of every living creature on the earth? Knowing that cell phone towers emit toxic EMF before they even starting erecting them, the cell companies made sure to bribe congress to pass legislation exempting health hazards as being a reason to keep a cell tower out of a neighborhood.

As of 2013, the population of earth was just over seven billion while the number of cellphones in use around the world reached 6.8 billion. There are few places on the earth we can now live without being exposed to these toxic waveforms and in 2013, the World Health Organization published a study connecting cancer with cell phone use.

The bad news is that I'm only touching the tip of the iceberg in regards to modern technologies and practices that are adversely impacting all the plants, animals and peoples of the world we live in. The good news is that with education, discipline and responsible use of your resources, it's possible to surround yourself, your loved ones and your immediate environment with natural, health enhancing energies that will work to continually clean, feed and protect you and the environment in which you live.

OBJECTIVE EVIDENCE

Ok, so you may be thinking, "I'm convinced of your sincerity as the messenger but I'm still having trouble believing you?"

Before providing you with more evidence, I want to clarify that water has the capacity for memory and water will retain its optimum form and function so long as it isn't mishandled. Moving water through straight pipes laden with chlorine and chemicals while using modern filter technologies to "purify" water won't insure water's ability to optimally perform its God given tasks of cleaning, feeding and protecting life.

Remember, pure water can be defined as water in it's natural, balanced state, both energetically and materially, yet, cleansed of matter and energy which isn't congruent with nature.

AMAZING RESEARCH

How is it that this clear, innocuous substance we all know as water has the potential to have such an astounding and beneficial effect on life? The following scientific discoveries may help us to understand and more fully appreciate the hidden mysteries of water.

Research carried out by Nobel Prize winner, Professor Luc Montagnier revealed that water and DNA responded identically to many outside stimuli and can actually be programmed or "structured" by electromagnetic and sonic frequencies in the form of photons (light waves) and phonons (sound waves). Interestingly enough, as a consequence of his research, he fell out of favor with fundamentalist academics of the West and was immediately picked up by the Chinese who appreciated his work so much that they named a research institute after him.

The structuring of water in response to light and sound has also been confirmed by Dr. Gerald Pollack of the University of Washington, as shown in his groundbreaking work with water through which he continues to disprove the currently held scientific theories surrounding water's true structure and function. In spite of his ground breaking research which should require the rewriting of textbooks, he has managed to stay in the good graces of Western academia.

The findings of Dr. Montagnier and Dr. Pollack were actually influenced by similar discoveries made by the most recent in a long line of water pioneers. In 1988, Dr. Jacques Benveniste discovered that a material substance could be diluted in water and then be completely removed from it yet the water itself continued to retain the same vibrational frequency as the removed substance, just as the voice of a singer is transferred and stored onto a CD.

Dr. Benveniste's remarkable findings were scoffed at and resulted in him losing his job and reputation, as well as being blacklisted from any further participation in the mainstream scientific community. Nevertheless, he was able to maintain his integrity in the face of insurmountable odds while simultaneously validating his amazing discoveries with only limited resources, funding and support. Dr. Benveniste's research has served to provide the world with further clarity regarding the controversial work of Samuel Hahnemann, the German physician of the late 1700's who was the father of homeopathic medicine.

Homeopathic remedies consist of only water and energy and it is the invisible energetic signatures of natural substances that work so mysteriously in homeopathic remedies to treat all kinds of diseases, illnesses and ailments. A homeopathic remedy is created by the process of succussion which creates vortexes which in turn creates optimal storage capacity within the water to absorb and store the energy signature of the remedy being created.

In 2002, Dr. Peter Gariaev, director of the Wave Genetics Institute in Moscow, Russia, successfully managed to directly impact genetic information in the DNA of living rats using only electromagnetic frequencies. The information transfer of healing electromagnetic frequencies resulted in a 90% success rate in the healing and rebuilding of damaged pancreatic tissue. In some of his experiments the technology used was modified to allow for successful wireless transmission of the healing frequencies to the sick rats at a distance of 20 kilometers (over 12 miles). Extremely weak signals were used yet astonishingly the rats' DNA was able to read and apply the signals achieving a complete healing in almost every case.

In other amazing discoveries of water's mysterious attributes, scientists at the Helmholtz-Zentrum Dresden-Rossendorf in Germany discovered that the structured water surrounding the DNA molecule actually influenced the very structure of the genetic code of life itself. What these researchers determined was that water can absorb, retain and also transmit biological information from one source to another by using electromagnetic frequencies. These results confirmed earlier, on-going, research started in 1951 by Dr. Piccardi of Italy verifying water's extreme receptivity to subtle cosmic energy influences.

FURTHER EVIDENCE FROM OUR TRIALS AND RESEARCH

1. **Molecular Structure** - Two dropper bottles were filled with tap water with being energised and one not.

Notice how the water forms on the paper on the table. The unstructured water (left) shows more dissociation and chaos. The energised water (right) behaves differently. It pools up very naturally displaying a tendency to stay together and form a natural pool on the paper.

2. **Water Penetration & Evaporation** – In another experiment, using multiple layers of paper on the table shown above, a dropper was used to administer six drops of energised tap water on one side of the table and six drops of normal tap water on the other side of the table. After one hour, the tap water had evaporated leaving behind only a water stain on the paper, whereas the energised water was absorbed, soaking several layers of papers deep.

How does this relate to water use outside the lab? We routinely see 'reduced' water usage with 'increased' productivity on farms that energise their water. Why? When water has a payload of energy and its function is to deliver that energy to the root structure of the plant. When water is devoid of energy, (due to chemicals, straight pipes and pumps), it is programmed to return to the skies where it begins the energization process anew via the absorption of cosmic energies.

3. **Taste of Water** - In nature, water taste and quality are enhanced by both agitation and information transfer. Both of these principles are at work in the Greenfield Naturals products. We routinely receive reports of improved water quality and water tasting soft and sweet.

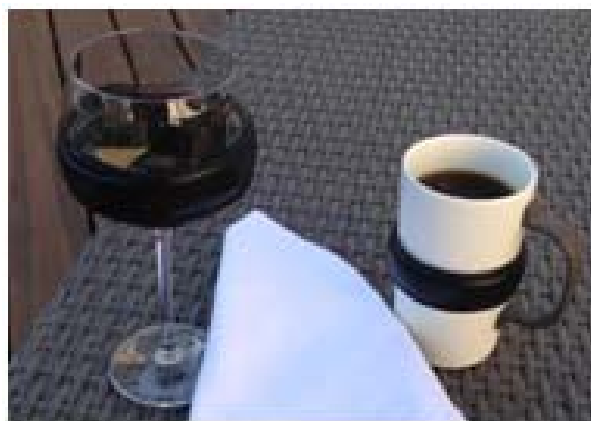

4. **Water Clarity** - These jars were both filled with tap water from the same source. One was energised tap water and one was regular tap water. This photo was taken after the water had mingled with the rice for two and half months.

The water on the left was treated with a Hydro Energiser while the water on the right came straight from the tap.

5. **Taste of Coffee, Wine, Beverages** - Any kind of drink can be enhanced by simply exposing a beverage to an informational field which is featured in the Harmonizer. Stirring will further enhance taste. Pay particular attention to the finish. Coffee that has a bitter finish is one of our favorite tests. The bitterness disappears!

In some cases, weak coffee is sensed as coffee only because of the bitter finish. Take this away and you will have the taste of very, weak coffee. Start with some good coffee that has body to it. The Harmonizer will both take away the bitter finish and leave more of a chocolatey taste in the coffee.

Heads Up - When doing a taste comparison, it's best to taste the unstructured water or beverage first and then the structured water or beverage. Why? Because anything you sip after tasting the energised liquid will be influenced by the residue of energised liquid remaining on your lips, making any further taste comparisons potentially futile.

We don't claim that the Harmonizer will change a \$5 bottle of wine into a \$25 bottle of wine. But it will create a smoother finish removing the bitter aftertaste.

6. **Athletic Performance Improved** – We recently worked with a professional fitness trainer and former professional volleyball player who tested the Harmonizer Wrap to determine effects on her strength, balance and mental acuity. After performing numerous strength and agility exercises with and without our Harmonizer bracelet, she theorized that the Harmonizer bracelet improved her strength, balance and mental acuity by 15% to 20%. These benefits were accomplished because all the fluids in her body were becoming energised by minerals energies emanating from the Harmonizer bracelet and being harvested by her body.

Note: The Harmonizer Wrap is no longer available but a similar product will be available soon. Watch for it on the website.

7. Pain Relief & Sleep Aid - We regularly receive reports from customers of how our products have aided sleep, provided pain relief from various ailments, accelerated recovery from injuries and enhanced vitality.

“I placed the Harmonizer next to area where I was experiencing a headache and gave it a few minutes. It’s worked for me twice now to neutralize the pain. I use it in the bath to enhance the water from my tap and place it daily on the wall opposite the breaker box to help neutralize unhealthy EMF waves emitted into the house via electrical wiring.”

— Rita Childers

8. Agriculture - Greenfield Naturals has been working with farmers in the states and India since 2010.

Amazing results

These green beans were part of our energised water trials which took place in Mysore, India. They were grown in identical conditions with the only difference being one crop received energised water and the crop received well water. Note that there was a 100% increase in production simply by running water through Greenfield Naturals a water energised unit.

What Do Cows Know That We Don't?

Energised water was placed in the blue bucket and untreated well water in the red bucket. The cow sniffed both and then proceeded to drink the entire bucket of energised water, even licking the last drops from it while ignoring the untreated water in the red bucket. This simple trial took place on an organic farm located near Mysore, India.

This simple trial took place on an organic farm located near Mysore, India.

“Here’s the first thing I’ve noticed; corn grown with Harmonized water is taller, hardier with more robust root structure.”

— Paul, Ozark Mountain Orchard

HEAVY METALS

I have been studying water behavior since 2009 and have concluded that as water is energized, it has the capacity to more effectively fulfill its functions of cleaning, feeding and protecting. Additionally, as a result of what I have observed, I am theorizing that energized water has the capacity to sequester heavy metals until they pass through the body.

It's also a known homeopathic principle, "like cures like", that water infused with the frequencies of a specific heavy metal will work to flush those specific heavy metals from the body. As these heavy metal particulates make their way into the soil, I also believe that naturally occurring EMF will synergistically work with the aid of microbes and natural forces to act upon the heavy metals in a way that will bring balance to the soil.

THE PLACEBO EFFECT

The placebo effect minimizes and even treats with disdain, the vital role energy plays in regards to maintaining good health. The mind as well as minerals and elements are all EMF generators. Thoughts are electromagnetic in nature and when we think good thoughts, good things happen. Minerals and elements were created to always emanate beneficial EMF. Good EMF whether emanating from a rock or a human, cleans, feeds and protects. A mother's love for her child is manifested by love, which is good energy (EMF) being generated for the purpose of cleaning, feeding and protecting her child.

The mind, the elements and the minerals can all be corrupted by man's intention to do that which is against nature, thus the difference between pharmaceutical and natural medicines, processed foods and fresh foods, synthetic materials and natural materials. Our intention should be to live in a manner congruent with nature and in so doing, we will experience a level and quality of life never before experienced and generating good mind energy, (EMF), is the catalyst.

UNIVERSAL ENERGIES

Everything in the universe gives off energy in the form of electromagnetic frequencies and because this energy is for the most part invisible to our senses. We don't give it much thought yet these energies control the weather, plant growth and all cell functions in all creatures great and small. Everything in the universe works on a principle of wireless frequency or information transfer. Everything in creation works together symbiotically like an orchestra emitting energies that animate without which all creation would be lifeless, dark and void.

All communication in nature including communication between people is based on information transfer and ultimately all of our God given senses; voice, touch, hearing, seeing, smelling and tasting, function as EMF transmission or receptor sensors using the subconscious and conscious aspects of the brain as the control and storage mechanism for evaluation and dissemination of EMF energy.

Nature can be compared to a perfect symphony of sounds, heard and unheard, consciously and subconsciously felt, and these sounds bring harmony and health to every cell in our bodies as well as to the cells of all plants, animals and microbes. These sounds of nature are naturally occurring EMF and their primary functions are to clean, feed and protect everything they come into contact

with. Just as the ocean surrounds fish, natural EMF surrounds and permeates all life, sustaining and enhancing all life on earth.

On the other hand, modern EMF technologies based on manmade and synthetic electromagnetic energies such as cell phone, Wi-Fi, radar, TV, sonar, smart meters, etc., all work to interfere with the communication processes of nature's energies and can be considered 'malformation' transfer. These man-made EMFs are having an increasingly toxic effect on people, plants and animals.

All elements, minerals and rocks have a specific role to play in supporting and enhancing life processes. Just as there is no junk DNA, there are no junk elements, minerals or rocks. Yes, even mercury, arsenic and lead in trace quantities contribute to sustaining life on earth.

Wherever there is flow or movement, there is information absorption. Consequently, water, electricity and any other flowing medium is able to absorb the natural energies generated by elements and minerals. One of the primary functions of water in the ground and the atmosphere is to carry life enhancing and vital energies into plants, animals and people.

As water or electricity pass by elements, minerals and other information sources, what takes place is a literal wireless information download into the water or electricity. The download of information represents the transfer of light energy which emanates from the elements, minerals or other information sources into the water. All EMF is a manifestation of light energy in different frequencies.

CREATION, GOD & LIGHT

All elements, minerals and every other material form emanates a frequency or frequencies or an energy signature which was programmed by the Creator when the creation process originally took place thousands of years ago. When God was hovering over the waters on day one of creation, He was contemplating the existence of everything and this time of hovering was the time of formulation. What God thought became a reality and we are living in that reality today. Consequently, what we see around us in its natural state is a manifestation of the mind and character of God but that which is corrupted and not natural is a manifestation of the mind of broken man influenced by dark forces.

The phenomena of frequency transfer started with God transferring to the waters His intentions which comprise His uncreated energies and these are the energies that mysteriously hold all things together. His uncreated energies stand apart from the created energies which are the energies that compose light and matter which are the two components that make up all of creation. God's uncreated energies formulated the blueprints for the construction of creation. The creation story reveals an orderly process which holds the secrets of nature which are not discernable to the man who doesn't know the One who created it all in the beginning.

One of the secrets revealed to us in the creation story is understanding to some extent how light travels. In the creation story, God placed the stars or luminaries in the heavens and immediately there was light on earth. Although, Einstein was voted the man of the 20th century, he was not in sync with the workings of creation. His mathematical formulas regarding light and gravity assumed a heliocentric (sun centered) rather than a geocentric (earth centered) model of creation. Consequently, his mathematical formulations can be considered incorrect and confusing but high

sounding intellect which has led mankind away from a true understanding of the workings of nature.

One of the smallest of God's creatures, responding to one the largest of God's creations also reveals to us the instantaneous transfer of information regardless of time and distance. How do we know this? One example was given to us in 1930, by the Russian scientist, [Alexander Chizhevsky](#), who observed bacteria responding to solar flares minutes before he actually observed them. His experiment revealed that bacteria are able to respond to an event many miles away instantaneously or perhaps bacteria are able to read seismic events before they occur by way of EMF created by the events leading up to what man can only experience with his physical senses. Mr. Chizhevsky was another scientist who suffered for his research. He was sent to his death in the gulags by Stalin.

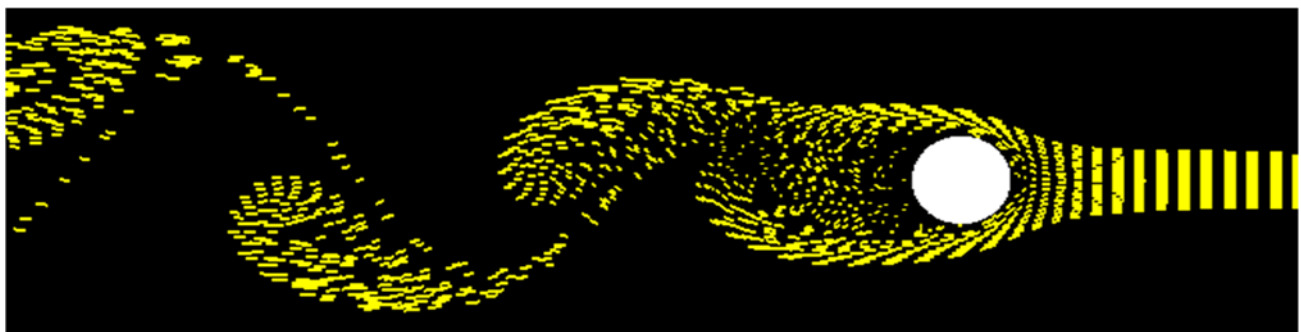

Vortex actions

To reiterate, pure water can be defined as water in it's natural, balanced state both energetically and materially yet cleansed of matter and energy not congruent with nature. Water in its natural state has a complex structure which enables it to carry nutrients both in physical and energetic states for the purpose of feeding, cleaning and protecting everything it mingles with. Water is present everywhere on earth and in the heaven constantly sustaining, energising and rejuvenating all life processes.

On the other hand, unnatural water is created by water softeners, distillers and reverse osmosis systems which strip water of life sustaining minerals such as calcium and magnesium. Calcium and magnesium contribute to the yin and yang of life processes. Calcium constricts muscles and magnesium releases muscles. Calcium and magnesium are two of the many important minerals dissolved by water as it seeps down into the earth. Water is one of the primary sources of these minerals for our bodies and all life forms yet our modern water treatment systems are removing them from the water. Why? They don't understand or don't care to learn from nature. When water is brought back to its natural state, scale build up in pipes and nozzles is no longer a problem.

Greenfield Naturals products are engineered to mimic the natural water cleansing and charging processes that occur within the hydrologic cycle. The functional motto of "Comprehend nature and copy it" is based on the life work of water visionary, Viktor Schauberger, an Austrian forester and naturalist who lived during the first half of the twentieth century.

The basic design of our water energising devices was inspired by implosion technology first developed by Mr. Schauberger based on his observations of water flowing in mountain streams. He realised that the energising flow dynamics of water followed a three dimensional vortex pattern which occurs wherever water flows in nature.

These three dimensional flow patterns identified as vortices are reflected by left and right turn spins creating a tubular and implosive action resulting in a drawing in and collecting of waters from a wide periphery around the vortex culminating in a narrow flow of turbulent thrust. These actions occur wherever water flows in the air as moisture or in the sea as a liquid.

This dynamic toroidal vortex is the means by which energy flows and is the foundational basis for all life. The results of these vortex energy flow patterns can be observed in all natural conditions where fluids or vapors flow. A few example of the actions and effects of the torus vortex are the electromagnetic fields generated by the human heart, the shape of flowers, fruits and trees.

The vortex is the inspiration for all implosion technologies and the toroidal vortex in particular is considered to be the main mechanism responsible for imbuing water with its critical ecological functions of renewal and life support.

Vortices are the energy transformers and energy accumulators in nature. A vortex can increase the vibrational state of any electromagnetic frequency and it can restore the natural energy patterns to something that has been corrupted. Vortex flow in nature provides the ability to remediate all forms of pollution in the water by transforming the electromagnetic frequencies of the water back to its healthy state.

When water flows in a toroidal vortex the following benefits occur:

- De-structured, malformed and corrupted water molecules are bought back to a structured state.
- Ordered molecular patterns are created from chaos.
- Malformation which always reflects a toxic state is disassembled to an elemental and natural state.
- Corrupted electromagnetic frequencies are cancelled out or tuned into a natural waveform frequency.
- Beneficial electromagnetic are accumulated from the field.

Water Has Energetic Memory

Dr. Jacques Benveniste, a French medical researcher who was mentioned earlier in this booklet also discovered certain properties of water which defy explanation by the tenets of mainstream physics. Digital Biology, the science he developed is based on two breakthrough observations he proved in experiments that have been duplicated by other scientists.

First, if a substance is placed in water, the water will carry the memory of that substance even when no measurable molecules of the original substance remain. The water absorbs the electromagnetic frequencies of the substance and will retain this energetic memory even if the original substance is subsequently removed from the water.

Secondly, the molecules of any given substance have a spectrum of electromagnetic frequencies that can be digitally recorded with a computer and then played back into the untreated water using an electronic transducer causing the exposed water to behave as if the actual substance were physically present.

Dr. Benventiste's work proves it's not enough to simply remove toxins and contaminants from water by filtration, reverse osmosis or chemical treatment. To restore water to its healthy, life enhancing state, the electromagnetic frequencies of any harmful substances must be removed or ameliorated and replaced by energies present in all natural crystalline materials and this can only be accomplished using nature's optimal tool, the vortex.

Optimal Structure, Optimal Water

It's the structure of water and not its chemical composition that determines its properties. For instance, this can be observed with carbon which according to its molecular angulation will form into a diamond, the world's hardest material or into graphite, one of nature's softest materials. What makes the difference? Not its chemical composition but the angles of the molecular structure.

The degree to which structuring takes place within water is a direct result of the following:

- The quality and pattern of water flow
- The medium over which water flow takes place
- The energies present in the vicinity of the flowing water

To conclude, optimally energised water requires optimal structuring of the water molecules and this is accomplished when water is subject to vortices while in the presence of nature's energies. This is what the Hydro Energiser accomplishes.

TIME TO REWRITE SCIENCE BOOKS

Modern day science has failed us in so many ways. Most of what I have shared with you in the booklet would be considered myth and fables by modern day academicians and scientists and these are the people who have been teaching our farmers, doctors, scientists and everybody else a worldview I would contend is bankrupt and unsustainable. There is an old Hebrew proverb that states, "There is way that seems right to man but in the end, it leads to death". This 'way' is what we have been taught from elementary school through college, while continuously being girded up throughout our lives by the media, government and religious authorities.

“There is way that seems right to man but in the end, it leads to death.”

— Proverbs 14:12

Hope for the Future

Wrong thinking has led to wrong living. Right thinking will lead to right living. My hope is that we will learn to live in the light of truth instead of falsehood. Truth is here in plain view for us to experience but we must seek it, open the door to it, embrace it and then live by it. In doing

so, blessings will flow and the living waters of life will be ours to enjoy. May God help us, guide us and lead us into all truth.

“Know that wisdom is such to your soul; if you find it, there will be a future, and your hope will not be cut off.”

— Proverbs 24:14
