

The California Fire Science Consortium is a network of scientists and managers that strives to accelerate the awareness, understanding, and adoption of wildland fire science information by federal, tribal, state, local, and private stakeholders within ecologically similar regions.

WHAT WE DO

Diversify dissemination tactics to maximize exposure, understanding, and integration of fire science concepts across a wide range of landscapes and managers.

Foster collaboration and strengthen networks across research, management, policy, and public spheres to ensure maximal relevancy, utility, and positive outcomes of fire science information.

Elevate fire science literacy across public, policy, and media spheres, increasing the social license, will, and demand for needed change.

HOW WE DO IT

Providing Outreach through our newsletter, website, and social media accounts

Creating Resources such as research briefs, syntheses, and factsheets

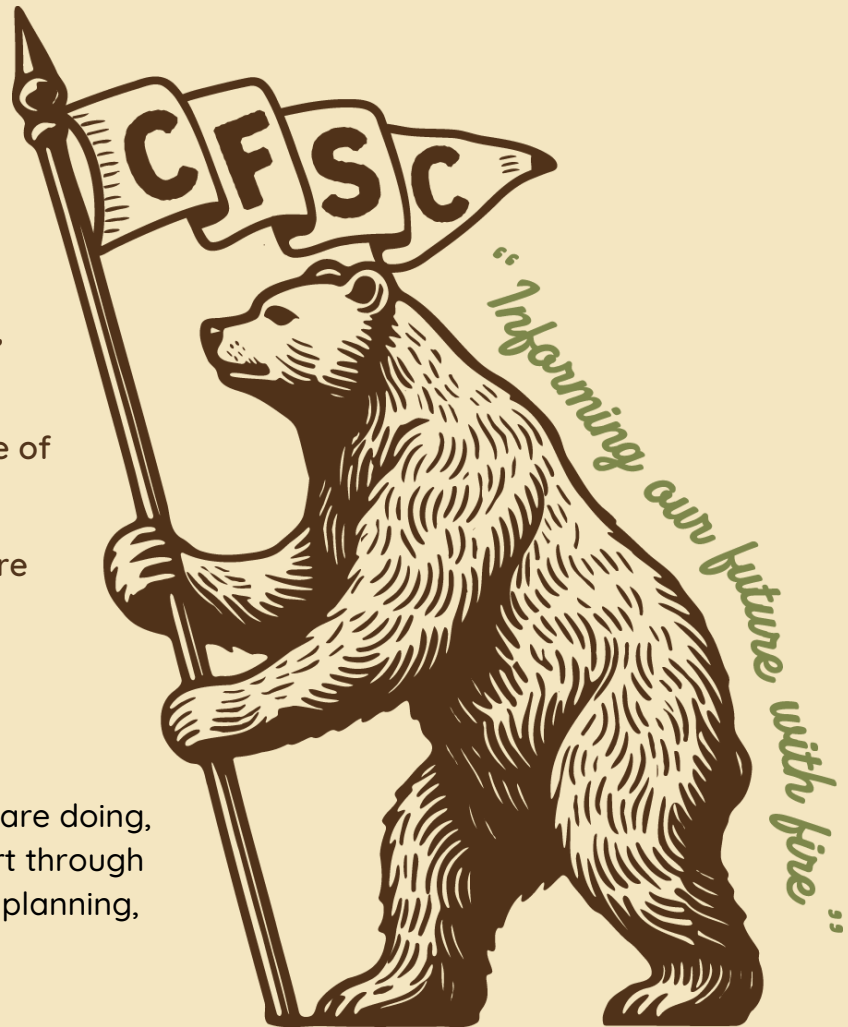

Hosting Events including webinars, workshops, and conferences

Collecting Research Needs to shape the future of JFSP's funding opportunities

Supporting Partners to expand the reach of fire science information

PARTNER WITH US

If you are looking for support for the work you are doing, please contact us! We can offer tailored support through sponsorship, personnel resources, logistics and planning, or outreach.

WHERE WE'RE LOCATED

California encompasses a diverse social and ecological landscape with distinct regional challenges that require localized insights and solutions. To address these complexities, the CFSC supports a strategic network of sub-regional information hubs and experts to target audiences and messages that are ecologically, environmentally, and culturally relevant to the area. The structure for the California Fire Science Consortium includes a statewide team, four geographic subregions (as outlined in the map below), a statewide Wildland-Urban Interface team, and a cross-border and bilingual WUI communities team.
