Online Instructions – Judges

Thank you for participating in our virtual State Science Day.

Privacy & Safety: Students participating in this program are minors. There will be no real-time live interaction between judges and students. All information required to evaluate a project will be found in the milestone presented. Judges shall not attempt to contact students for any reason. While the Ohio Academy of Science has taken measures to limit personal student information to judges and others, be advised that no personal information about a student shall be shared with others, including, but not limited to, the video.

Judging for the State Science Day will be from Tuesday, May 26th through Tuesday, June 2nd.

Login Site for judges to review projects: https://statescienceday.stemwizard.com/judge/login/statescienceday

Once you have been assigned to your sponsored award projects, you will see a new option on your navigation menu titled “Judging”:

Click on that option and you will be taken to a table showing the projects that have been assigned to you:

Virtual Judging Science Day Milestone

You will see a list of the project titles, as well as a column of links (red box above), a “Details” link and an “Add Score” button. Please do not use the “Add Score” button. That is for the general judges for State.
The column of links will allow you to review the uploaded project photos, student presentation via YouTube and the final report submitted. As you click on the links, the project items will appear in a separate browser window.

Students have uploaded photos of their project display board and/or a PDF of their board content. Please note that not all students had their display board at home with them when the schools closed. Student access to technology to produce project poster photos and a project presentation video was dependent on what equipment and internet access that the student had available to them at home. Schools, libraries and other sources of technology and internet are all closed or have limited access. When evaluating projects, points should not be deducted based on production quality.

The “Details” link will open a window that has the answers to the judging question that all students were asked to answer.

Virtual Judging Science Day Milestone

Student(s): Alyson Gruber
What is your project title?
Is XYZ a better cleaner than ABC
Do you have an individual or team project?
Individual
Grade: 
65
Type of Project:
Science-Hypothesis Based - student completed first-hand experiment and data
Preferred Judging Category:
Animal Sciences
Project Questions (from judge score card/rubric): Answer in specific detail as re:
Is XYZ a better cleaner than ABC test test test
Where did you get the idea for your project, experiment design, and analysis?
Is XYZ a better cleaner than ABC test test test
Based on the question above, did you modify the idea and if so, how?
Is XYZ a better cleaner than ABC test test test
What interests you about this topic?
Is XYZ a better cleaner than ABC test test test

**PLEASE DO NOT ADD SCORES OR COMMENTS IN STEMWIZARD. The Academy’s general judges use this screen. You will report your scoring information back to your Judging Chair.**

Thank you again for your supporting State Science Day and for encouraging the love of science and engineering in our students.
