# CROSSMARK LMS

Integrated Learning Management System

In most organizations today, the delivery and management of on-going training is performed using stand-alone solutions which deal only with the subject of learning management. While this meets the need for the specific area, it is lacking in integration with other applications or data the organization might have.

While information such as losses, incidents, and other risk management data can be and should be analyzed with respect to past and future training, it is a time consuming manual task and is thus often not performed to the degree that it should, or even not at all.

The Solution: CrossMark™ LMS

To address the learning management needs of Risk Pools, CrossMark has developed CrossMark LMS, an advanced Learning Management System which is tightly integrated within the CrossMark Risk Management Suite.

Built on the latest industry standards for cross-browser, cross-platform web solutions, CrossMark LMS securely extends the Risk Pool's course catalog, scheduled trainings, and e-learning courses to Member agency employees including HR staff, and training coordinators. CrossMark LMS provides:

- A complete, integrated learning management solution
- Automated self-service for Member agency staff
- Comprehensive course and training delivery management

RISK POOL SOLUTIONS

Multiple Delivery Modes

CrossMark LMS supports a wide variety of methods for the delivery of training including:

- Classroom
- E-Learning
- Webcast and Webinar
- Multi-day Academies
- Conference Educational Forums

Single and Multi-Site

Instructor-led training can be performed in a single classroom or spread across multiple sites such as a session in a classroom followed by a hands-on session in a yard.

Public and Private Training

Trainings can be scheduled to be available to all Member agency staff, restricted to agencies of a specific region, or even given privately for one or more agencies.

Similarly, courses themselves can be created for a specific agency or set of agencies, thereby only shown in the course catalog to staff of those agencies.

Agency-managed Training Coordination

The management of training for agency staff can be delegated to one or more agency training registrars, either agency-wide or for one or more departments. Training registrars are fully enabled to manage training for others including registration, reporting, training certificates, adding and removing learners, and the hosting of on-site events.

CrossMark is a registered trademark of CrossMark Risk Solutions, LLC

Easy One-Click Self-Registration

Member agency staff can easily browse or search for desired trainings and then register for training with a single click. Since each staff member has a training profile and transcripts integrated with their contact record, there are no forms to complete or additional information to provide.

External E-Learning Integration

3rd party E-Learning solutions such as Mastery can be integrated directly into the LMS, including the course catalog, registration, course launching, and transcripts.

Notifications and Reminders

CrossMark LMS provides a comprehensive set of notifications and reminders to all stakeholders of each training event including registered learners, training registrars, training hosts, and instructors. Once a training is complete, CrossMark LMS delivers the pertinent Certificates of Completion for all verified attendees.

Pre-built and Ad-hoc Reporting

CrossMark LMS provides a broad set of reports for Member agencies as well as Risk Pool staff including Completed Training, Attendance, Available Trainings and Courses, Individual Transcripts, Certificates, Sign-in Sheets and Tent cards. Ad-hoc reporting is also available throughout the system, provided through Excel-style sorting and filtering, with easy export to Excel.

Integrated across the CrossMark Suite

Because the CrossMark Risk Management Suite is built on a single, consolidated source of information, training data is shared across all solution components. No more manual correlation tasks. No more replicated, out of date information.
