Architecture and psychiatry - spatial mechanisms that promote social cohesion

27.3.2023 | 17:00 - 18:30 | 06. Room 143

Code: WP08

Type: Workshop

Topic: Research

Description: This interdisciplinary workshop brings together architects and clinicians to discuss the potential of the physical environment to promote social interaction and cohesion in psychiatric facilities. The built environment and the „therapeutic milieu“ is known to influence treatment satisfaction and clinical outcomes. Despite growing evidence supporting this influence of architecture on wellbeing, the impact of architecture and design is often ignored or left to accidental solutions. In this workshop we focus in particular on the question of how the built environment can facilitate meaningful and positive interactions between patients and staff as well as amongst patients. Critical design elements such as spatial typology, entrance narrative, wayfinding and the choice of colour/material will be examined and we will give practical examples of how these factors can actively facilitate meaningful interactions. Furthermore, we will discuss the importance of the design process itself and propose a structured approach leading to “consensus design”. Julia Kirch (Architect) - "Spatial typologies in psychiatric facilities" I will give an overview of typologies that characterize different approaches to building psychiatric facilities and discuss advantages and disadvantages of different layouts. Nikolina Jovanović (MD, Psychiatry/Architect) -- "Impact of the built environment on treatment satisfaction of psychiatric in-patients" I will show results from a recent study on the impact of the built environment on treatment satisfaction of psychiatric in-patients. Jason Danziger (Architect) -- "The concept of sociopetal design" I will examine what possibilities spatial elements can offer to support emerging group identities and encourage meaningful interaction between staff and patients as well as the community and reduce stigmatisation. Martin Voss (MD, Psychiatry) -- "Consensus Design" I will point out the important role of a thorough planning process in which all stakeholders engage already in early phases of the design process and how this can result in individualised and optimised therapeutic environments, strengthen identity and reduce stigmatisation. Craig Driver (Architect) -- "A best-practice case study for built environment in psychiatry" I will present a best-practice case-study which implements an innovative waymaking/wayfinding concept inspired by the bauhaus „Wandmalerei“ workshop as part of his current psychiatric hospital project, „The Rivers“, in Norwich, UK.

Chair: Martin Voss (Germany) , Jason Danziger (Germany)

17:00 - 17:14	Spatial typologies in psychiatric facilities (View Abstract) Speaker: Julia Kirch (Germany)
17:14 - 17:28	Impact of the built environment on treatment satisfaction of psychiatric in-patients (View Abstract) Speaker: Nikolina Jovanović (United Kingdom)
17:28 - 17:42	The concept of sociopetal design (View Abstract) Speaker: Jason Danziger (Germany)
17:42 - 17:56	Consensus Design (View Abstract) Speaker: Martin Voss (Germany)

17:56 - 18:10

A best-practice case study for built environment in psychiatry ([View Abstract](#))
Speaker: Craig Driver (United Kingdom)
