

Zio™ Fungicide

Zio actively colonizes treated plants, fighting disease from within.

BIOLOGICAL, REDEFINED.

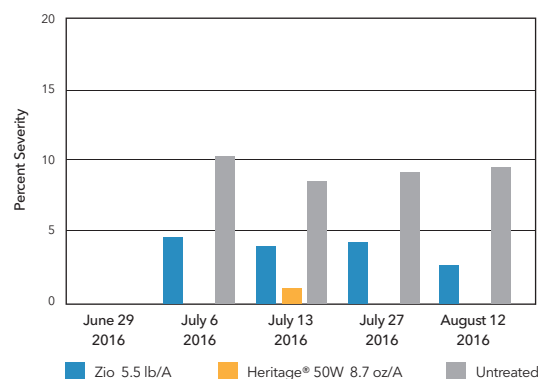

Introducing Zio fungicide.

Zio fungicide is the first identified and developed turfgrass fungicide from the Genesis™ platform by AgBiome. The Genesis platform is designed to collect, isolate, analyze, and test microbes for use as biological control products. Lab, greenhouse, and field trials have proven Zio's efficacy on a broad-spectrum of common turfgrass pathogens.

Multiple modes of action

- Zio affects fungal respiration similar to synthetic chemicals
- Enzymes breakdown the skeletal structure of fungi and prevent fungal spores from attaching and infecting plants
- Colonization of plant parts and soil—competing with pathogens for vital resources

Control of Brown Patch on Creeping Bentgrass

Features & Benefits

Features	Benefits
Multiple modes of action	Antimicrobial, enzymatic, and colonizing action prevent resistance development
Broad-spectrum of activity	Exceptional rotation tool
Easy to use formulation	Wettable powder formulation is easy to measure small or large acreage
Labeled for use on cool- and warm-season turf	Excellent turf safety for locations with multiple turf species.
OMRI listed	Registered for organic use
