## JEWELRY CARE

Caring for your TEMPER pieces, like anything else you care about, is important. Since all of our items are plated with either 18k gold or white platinum, they should be cleaned every so often to maintain their sheen as your natural skin's salts, chemicals, and pollutants in the air can affect the plating and tarnish at some point. The brass that is the core of each piece is 100% recycled material and will in time fit to the signature shape of your finger, notice it's softness and malleability and maintain the integrity of each piece by being aware of the history of the materials used to craft each piece.

Gold itself contains no oxides and will not tarnish like other precious metals, it is a very soft metal, however, and with heavy wear and misuse the more quickly the plating will fade and the patina will become more noticeable on the brass underneath. White platinum or sterling silver naturally oxidizes with time, avoid direct contact with strong chemicals like bleach, perfume, chlorine, or lotion.

For light cleaning, use one teaspoon of mild liquid dish soap with tepid water in a small bowl and use a soft cloth, preferably one specifically used for jewelry cleaning, and gently rub the jewelry while keeping it in the bowl- no longer than 10 minutes. Dry with a clean cloth. We recommend light cleaning every two weeks for the utmost shine. Avoid any kind of cleaner that is abrasive.

Keep in mind that humidity increases tarnish factor for your jewelry; to keep your pieces in top form keep your items in a dry, cool place- storing in a plastic bag is even better to slow oxidation. Letting any of your pieces sit in water for long also causes corrosion of the precious metals and fragile parts of your jewelry; take your items off before swimming, showering, or heavy cleaning to avoid damage or tarnish. Some skincare products, such as chemical peels or abrasive scrubs can also affect your jewelry.

All TEMPER pieces can be re-plated through a jeweler and you can also find some re-plating kits to for home use if you prefer.

## RING SIZE CHART

While we highly recommend using a local jeweler to get sized in person, you can use the chart below for a quick sizing reference. Prior to printing, ensure that Page Scaling is set to "None" on your print dialog box. Measure the bar on the left. It must be exactly 1 inch or 30 mm long.

## US & CANADIAN RING SIZES

Select a ring that properly fits the intended finger. Place the ring over the circles below, matching the inside edge of the ring to the circle nearest in size. This measurement refers to the inside diameter of the ring. If the ring falls between two sizes, order the larger size.

## RING SIZING TIPS

### Measuring Your Finger

Finding the right measurement for your finger is important when choosing your perfect ring. You don't want it to be so loose it falls off easily and should take some resistance to slide off, but not too snug that it's uncomfortable.

Keep in mind that your finger size changes depending on your body temperature, time of day, and weather. Here are some Temper proven tips to help ensure you get your most accurate sizing:

- Measure at the end of the day when your fingers are warm and used to the elements and movement. Try and measure when you're not feeling too cold or hot, for example right after a workout, feeling extra chilly, or when waking up.
- Measure the finger(s) at least 3 times to make sure you have the correct sizing
- Do not use strings to measure your finger as it can stretch and give an incorrect reading
- If you find that two sizes fit, we find it's better to go up one size.
