

FABMaker Tool Tips

Using Edit Points

Fab@School Maker Studio Edit Points let you reshape Ready Made and original designs in fun and creative ways. Try this.

1. Go to Ready Made Projects, 2D Stuff. Open Bear Mask and go to page 1.
2. Select the **Edit Points** tool so you see the blue edit or “anchor” points that define line segments.

3. Drag edit points to reshape your design. You'll notice that edit points on a curve have handles at either end. Drag the handles to change the direction of the curve.
4. Add edit points by clicking anywhere on a line segment. Drag your new edit point to reshape. Can you figure out how to add horns?
5. Remove an edit point by selecting the edit point and then the **Trash** can.
6. Choose the **Select Tool** in the upper left to view your mask. Does it still look like a bear? See how a few edit points can create a completely different mask!
