Sustainable Harvest International (SHI) provides farming families in Central America with the training and tools to overcome poverty while restoring our planet’s tropical forests.
THE NEED

• The world’s number of malnourished people has increased from 190 million in 2007 to 210 million in late 2009 due to climbing food prices and economic recession. (International Labour Organization, 2009)

• Approximately 2.6 billion people—men, women and children —rely on agricultural production systems, be it farming, livestock production, forestry or fishery. (‘Agriculture at a Crossroads’ Global Report, IAASTD, 2009)

• In developing countries some 2.5 billion people are forced to rely on biomass—fuelwood, charcoal and animal dung—to meet their energy needs. Indoor air pollution resulting from the use of solid fuels is a major killer. It claims the lives of 1.5 million people each year, more than half of them below the age of five: that is 4,000 deaths a day. To put this number in context, it exceeds total deaths from malaria and rivals the number of deaths from tuberculosis. (Millennium Development Goals Report, 2007)

OUR SOLUTION

Sustainable Harvest International sees the importance of small-scale farming both as a means to ensure food sovereignty and to promote sustainable techniques that improve quality of living while restoring the natural environment. We take a hands-on long-term approach to solving the agricultural, ecological and economic problems of Central America through the work of our affiliate programs in Honduras, Nicaragua, Belize and Panama. SHI’s grassroots approach of hiring local staff and promoting cooperative sharing of knowledge and resources serves to break the cycle of paternalism for small-scale producers in the developing world.
Dear Friends,

With so much bad news in the world, I’m confident the stories of hope and transformation in this year’s annual report will bring you joy and optimism.

As for so many people, the past year has been financially challenging for Sustainable Harvest International. Thanks to the generosity of long-time supporters who were able to increase their contributions, and to new friends who gave for the first time this year, we narrowly avoided making significant program cuts. Although we were not able to expand our work to reach new families on our waiting list, we were able to strengthen our core programs. I hope that during the coming year, we will see our income increase again so we can reach more families, do more to stabilize our climate and ecosystems, take more volunteers to our work areas and continue to strengthen our work in the field and in the US.

As awareness builds about the global issues of poverty and deforestation, SHI continues to apply appropriate techniques, practical solutions and grassroots training. Through our programs I have seen environmental destruction reversed and communities empowered. Your contributions are having a huge impact on our planet and in the rural farming villages we serve. On behalf of the 1,769 families, 31 local field trainers and more than 2,150 students working with SHI, I thank you for making this important work possible.

Best regards,

Florence

* Bold denotes Corporations, Foundations & Community Groups

We would like to give our sincere thanks to all of the individuals and groups supporting our work with families in Central America this year. Your generous donations have led to the success of our programs, ensuring a healthy future for people and the planet.
Over the past year, SHI-Belize has led the region in solar drying eco-toilet installations. Partnering with organizations like the Red Cross, SHI-Belize installed twelve eco-toilets and train families on their usage. These eco-toilets enable farmers to turn waste into a resource, keeping it out of the water, and using it safely and hygienically to rebuild the soils of their farms. During the next fiscal year, SHI-Belize intends to install more eco-toilets and further integrate their use in family agricultural systems.

In addition to advances in infrastructure and appropriate technology, SHI-Belize is promoting a school curriculum that integrates agroecological concepts and hands-on experience with traditional public school subject matters such as math and science. Over twenty schools will be developing programs that touch on soil science, community cooperation, development and nutrient cycles.

SHI-Belize families are achieving improved standards of living and gaining access to new markets. Our field trainers are providing direct assistance in improved marketing techniques, planning an annual regional Organic Fair and giving assistance in fair trade and organic certification. Participants like Emiliano Choc of the Maya Mopan community are expanding their crop production and developing diversified agroforestry systems which feature various products for commercial sale such as cocoa, ginger, and vanilla. In the last year, participant families have made immense strides when it comes to production and marketing via contacts with the Toledo Cacao Growers Association and a developing collaboration with a Maine business, Barkwheat.

My greatest hope is to have a diversified and sustainable farm that allows me to live off what I cultivate and provides me with income. I will achieve this because I now have the support and assistance of Sustainable Harvest.

-Denis Castillo, Punta Gorda, Belize
The role of community and cooperation is pivotal in many rural sites in Honduras, and the community of Piedras Negras, Santa Barbara is no exception. Field Trainer Jorge Rodriguez’s leadership has motivated the communities he works with to share ideas and work together. Upon entering the mountainous coffee village, one can witness how families are supporting one another and paving the way for a sustainable and healthy future by their enthusiasm for local organic gardens, agroforestry systems and alley cropping. The seventeen SHI-Honduras participants in Piedras Negras and the fifty-seven others in surrounding communities embody the concept of SHI’s phased approach to sustainable community development, and without hesitation, have demonstrated a willingness to share their knowledge with neighbors not in the program.

During the past fiscal year, the Honduras program has further developed how it selects and prepares families for SHI’s model five-year work plan, and more importantly how it evaluates the medium- and long-range plans established with each of the participants. According to Country Director, Yovany Munguia, “We believe that with these changes, our annual results will not be independent, rather part of the bigger picture - our five-year which has families graduating from our program with developed skills in sustainable land-use practices. It is within these plans and those five years that participants see the future in a positive light. With dedication and effort, they can achieve significant changes and transcend the presence of SHI in their communities.”
The effects of civil war are devastating. Families like Ignacio Valle of La Fonseca or Gregorio Torres of Caño Azul represent a portion of the thousands of Nicaraguans that migrated from the interior of the country in order to find a new life. Like many of their neighbors, they fled to the far reaches of the Atlantic Coast to escape the atrocities being committed by both sides, Sandinista and Contras. Unfortunately, what most of them encountered was not a utopia but a land of depleted tropical soils, torrential downpours and inaccessibility.

SHI’s Nicaraguan affiliate, FUNCOS, is offering the Valle and Torres families, along with 225 others, sustainable alternatives to a life of poverty and instability. During the past year, field trainers have worked with families teaching sustainable silviculture (forest regeneration) and resource management and broke ground on what will become the program’s demonstration and educational farm (see photo, left).

According to Country Director Marvin Gonzalez, “The program looks forward to inviting participants and their families to visit the demonstration farm and learn via hands-on training the importance of diversified and efficient agricultural systems.”

I’m very excited by the work of Sustainable Harvest because I have reached an understanding that all human beings on this Earth should not be selfish with the environment, but rather we should protect it. Leaving a legacy of a healthy environment for our children, our grandchildren and all the generations to come is our obligation now.

- Marcial Urbina, La Pichinga, Nicaragua
Within the valleys and hills of Coce, SHI-Panama is building a network of farmers and families that seek sustainable solutions to their everyday problems. In the community of El Entradero, families are working collectively to integrate rice paddies with fish ponds and vegetable gardens. In Pagua, families are reconnecting with their culture by planting native palm and fabricating the traditional Sombrero Pintado or Panama Painted Hat from its leaves. Families are developing a new mindset that looks at the world as one system.

During the past year SHI-Panama has enjoyed many internal achievements including improved communication and training for staff. Staff are working as a team to expand their knowledge base. As a result of its achievements, SHI-Panama has redefined community driven development and the camaraderie that is critical to building a healthy and sustainable planet.

Right: Isabel Rodriguez with his containers of home-made organic pesticides.
Inset: Young girl wearing & weaving a traditional Panama Painted Hat.

When I began working for SHI-Panama, I quickly realized the far reaching impacts the organization has on local economies and environments. It is an entity promoting a model of sustainable human development which is realistic, and whose actions are centered on the family and their farm. We apply a working methodology that is accepted by small producers and constantly renews their enthusiasm to stay in the program and improve their future. SHI is helping families permanently improve their production capacity, reduce environmental threats facing local populations and habitat, alter their standard of living and contribute to the reversal of global climate change.

- Rodrigo Rodriguez, Country Director
Smaller World Tours offer groups and individuals the opportunity to connect to families working with SHI’s programs in Central America. Our local staff request assistance with specific projects and we match them with volunteer groups which provide the support and funding to make these projects possible. Volunteers work side-by-side with our local field staff and farmers who provide the training and materials they need for the work project. In addition to hosting various organized groups (listed below) this year, we welcomed many individuals on our popular Sustainable Chocolate Tours at Cotton Tree Lodge, a Family Voluntourism Trip, and on several new themed trips such as a Dairy Goat Workshop and an Educator’s Workshop.

Our upcoming schedule of tours is posted on our website: [www.sustainableharvest.org](http://www.sustainableharvest.org)

We worked, we learned, we contributed.
If there is truly a way to help the impoverished developing world, SHI holds the key.

- Margaret Crenshaw (Washington D.C.)

---

**Thank you to the following groups who participated in Smaller World Tours this year:**

- Brown University
- Camp Betsey Cox
- Center for Ecological Living and Learning
- Hancock United Church of Christ, Lexington, MA
- Holderness School Breadfruit Workshop
- Spring Island Trip
- St. George’s School
- Unity College
- Women to Women
INDEPENDENT AUDITORS’ REPORT
To the Board of Directors
Sustainable Harvest International, Surry, Maine
2 November 2009

I have audited the accompanying statements of financial position of Sustainable Harvest International (a nonprofit organization) as of June 30, 2009 and 2008 and the related statements of activities, cash flows, and functional expenses for the years then ended. These financial statements are the responsibility of the Organization’s management. My responsibility is to express an opinion on these financial statements based on my audit.

I conducted my audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that I plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. I believe that my audit provides a reasonable basis for my opinion.

In my opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Sustainable Harvest International as of June 30, 2009 and 2008, and the changes in net assets and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

Robert M. Sullivan, CPA
Blue Hill, Maine

A complete copy of Sustainable Harvest International’s financial statements may be obtained by contacting our office.
Sustainable Harvest International has
• Converted over **12,000 acres** to sustainable and diversified land use
• Planted **2,590,287 trees**
• Worked with **1,769 families** in **151 communities**
• Graduated **45 communities**

**DURING FISCAL YEAR 2009,**
**SHI AND ITS AFFILIATES SUCCESSFULLY...**

• Planted **309,675 trees**
• Started **180 vermiculture (worm composting) projects**
  • Built **149 wood-conserving stoves**
  • Created **10 community rural banks**
  • Provided over **225 loans totaling $28,000**
• Taught environmental education, nutrition and sustainable agriculture in **13 rural schools**
• Established over **1,200 vegetable, fruit & medicinal gardens**
• Worked with families in **106 communities**
• Employed **50 field staff** in Belize, Honduras, Panama & Nicaragua and **11 staff in the U.S.**

Mango seedling ready to plant in Honduras.
