

Capacitive Touch, Electronic Control Panel...

Electronic Temperature Controls
let you adjust inside temperature to precisely the desired setting

Control Lock – prevents accidental changing of preferred temp. setting

Door Ajar Alarm – warns you if door is left open for more than five minutes

Power Loss Indicator – alerts you if unit has been without power and for how long

Digital Display

- displays inside temperature in Fahrenheit mode
- provides positive feedback that unit is in 'lock' (or 'unlock') mode
- tells you when unit is in 'Extreme Freeze' cycle

Deluxe Convenience Group Features...

Safety lock with self-ejecting key

Protects your food investment 24/7 with a sturdy lock that seals the door snugly.

Key cannot be left in spring-loaded lock, so the unit is virtually child-proof.

Twin Glide-out Storage Baskets

Provide handy storage for packages that are hard to stack and allows convenient access to their contents.

Adjustable Door Bins

Provides for door storage at multiple heights for easy access to most often used products.

Dimensions and Specifications

Model: ANFCNAC21QWA

Net AHAM capacity	20.5 Cubic Feet
Cabinet Height	72"
Height w/Hinge	72.75"
Width	34"
Cabinet depth	27.25"
Depth w/door:	30.5"
Depth w/handle	33.1"
With door @ 90 degrees	62.5"
Voltage	115 V
Amperage	5 amps.
Power cord length	10'

Specifications are necessarily subject to change according to our policy of continual product improvement.

The All-Natural Food Council of North America is a non-profit organization of accredited member food companies that specialize in the sale and delivery of healthy, All-Natural foods, sold directly to consumers throughout the United States and Canada.

Member companies' CEO's meet regularly to further the development, sourcing, marketing and distribution of All-Natural foods for families.

ANFCNA™

COMMERCIAL • FROST-FREE

Designed and built exclusively for the
All-Natural Food Council of North America
to properly preserve healthy, All-Natural foods.

Specially Designed to Protect the Quality and Nutrition of All-Natural Food!

24 Important Benefits of this *Exclusive* Unit...

ANFCNA® Seal of Approval – Approved by the All-Natural Food Council of North America to meet the high standards necessary to ensure proper, long-term storage of **additive-free, all natural foods**.

U.L. Commercial Approved – unit meets or exceeds the specifications for a commercially-designated freezing appliance, yet is aesthetically designed specifically for in-home use.

Made in North America – Proudly manufactured in the USA by the most advanced manufacturer of freezing appliances for the home in the world.

Triple-thick, high-Density, foamed-in-place insulation – it's the ultimate energy-saving insulation and forms a rugged bond between the inner and outer walls for maximum strength.

One-piece, wrap around construction – walls and top of the cabinet are made from one piece of steel, eliminating the need for seams and joints that could cause harmful air leakage.

Powder-coated interior and exterior surfaces – electrostatically applied to provide a beautiful, rust-resistant, professional and easy-to-keep-clean finish for many years.

Warm wall condensing system – condensing coils are bonded to the sidewalls and top to provide the most efficient removal and dissipation of heat. Also helps prevent exterior condensation from forming during high humidity conditions and eliminates messy, dust-collecting coils on the back or bottom of the unit.

Double-wide, rubber-encased, magnetic door gasket with secondary bottom gasket – assures door seals securely against the cabinet to provide maximum protection from warm air entering the unit around the door.

Capacitive Touch Electronic Control – provides visual feedback to the user and allows internal temperatures to be easily adjusted to a range of desired settings.

Tamper-proof, digital Control Lock – assures that desired temperature setting is maintained and cannot accidentally be changed.

Digital temperature monitor alarm – warns you if the temperature inside the unit reaches a level that could be unsafe for the food. Also alerts you if the door is left open for more than 5 minutes.

Temperature display – allows current temperature to be displayed so you know the food is being kept in the proper environment for its protection.

Bright white, High-Gloss door finish with textured-surface sides and top – beautiful and easy to keep clean.

Sealed refrigeration system – eliminates ongoing maintenance of motors, bearings, gears, etc., in the entire freezing system.

“Convection-Freeze” System – continually surrounds your food with optimal, sub-zero air circulation to ensure that all products are kept at perfect temperature, regardless of location in the unit.

‘Extreme Freeze’ Feature – can turn the entire unit into a ‘quick freeze’ system, driving the internal temperature to 20 to 30 degrees (F) below zero. Quick freeze in-season vegetables from your garden, or properly freeze fish that have been freshly caught, cleaned and packaged.

Adjustable leveling legs – to help ensure proper installation of the unit, especially on uneven floors such as common in basements, garages, etc.

Coil-free, air-flow shelves – These rigid, grid-type shelves are designed so they're sturdy enough to be loaded fully, yet allow the cold air to properly envelop the food and maintain consistent temperature throughout the unit.

Continuous Power Defrost System – prevents harmful frost build-up on shelves and packages (which can lead to ‘freezer burn’ and desiccation of food.) This also eliminates the time-consuming and cumbersome chore of periodically defrosting.

- Deluxe Convenience Group** –
- **Large, bottom, glide-out basket** – for convenient storage and access of large or bulky items.
 - **Mid-level, glide-out basket** – for easy access to popular or hard-to-stack items.
 - **Adjustable door bins** – provide flexible storage space at multiple levels.
 - **Safety lock with self-ejecting key** – provides 24/7 security of your food inventory.

Energy Star Rated Unit – Saves money by meeting the high standards of energy efficiency that typically result in up to 30% less energy consumption than required by federal standards.

L.E.D. interior illumination system – Bright LED interior lighting system provides light from top and both sides - automatically turns on when the door is opened to make it easy to find products.

Door-closer – mechanism's unique design allows even a heavily-loaded door to close easily.

135-Degree Door stop – prevents an opened freezer door from swinging back against adjacent cabinetry and appliances - protects both the unit and what's next to it.
