

"This is one of those programs that you wonder how you ever did without."

--Children's Software & New Media Revue

Writing

Stationery Studio, 4.5 or ★★★★★, FableVision, \$69.95, 5-10, Windows, Macintosh— This is one of those programs that you wonder how you ever did without. Designed to support children's handwritten projects, the software makes it easy to customize and print writing paper. Included are templates for stories, letters, reports, shape books, mini-books and so on. There are 225 curriculum-themed

images and borders for customization, and five line options (primary skip-a-line, two types of basic primary lines, standard lines and no lines). The stationery can be printed in color or black and white.

There are options for writing onscreen, too, so teachers can create story starters, handwriting practice sheets and so on using, print, manuscript, cursive and dotted fonts. The software supports the ISTE/NETS, NCTE and IRA standards and is very easy to use. Both kids and teachers liked designing their writing papers, and the kids were actually anxious to get started writing. ★
