

THE SOCIAL NETWORK

CYBER SAFETY / SOCIAL MEDIA /
RELATIONSHIPS / INFLUENCE

Social media is an amazing tool, a powerful space that can be inspiring, inclusive and generally incredible. But unfortunately, that isn't everyone's experience.

It's no secret that we are social beings. We have an innate desire to connect authentically, to be included, to be known and loved. So, when social media entered the picture, our ability to connect extended to online platforms. With the click of a button or the swipe of a finger, we have access to incredible resources, endless information and we can converse immediately with people near and far.

So, does all this extra connection actually cause us to be better friends? What are the consequences of what we say and do online? In **The Social Network**, we empower students to utilise social media in positive ways. We aim to share the realities of social media - not neglecting to cover hard-hitting topics such as cyberbullying, sexting/nudes, and Facebook depression.

This workshop encourages students to think for themselves and to identify the role that social media plays in their life. We utilise story, media & activities to engage students and encourage them towards taking charge of their social media experience.

Media, storytelling, conversation, and interactive activities are creative expressions of our message, and are used to make this experience educational, valuable and memorable.
