YOUR GIRL RISING DISC

TECH SPECS

These specifications are designed to ensure that your Girl Rising screening is of the highest quality.

VIDEO SPECIFICATIONS

Your copy of Girl Rising will play best if it is projected to a screen that is 16x9 1.77, which is the aspect ratio of the film.

If you plan to screen the film in English, please select “Play.” Please note that there should be English subtitles during the foreign language sections in the film. When testing this DVD prior to your screening, please check that the English subtitles appear at the following timecodes:

00:10:25:16 - Haiti Chapter
00:23:44:04 - Nepal Chapter
00:31:34:14 - Egypt Chapter
00:56:45:06 - India Chapter
01:06:30:10 - Peru Chapter

If you plan to screen the film using one of our subtitle options, you can choose the language needed in the “Setup” menu. Once you select the language you need, select “Main Menu.” Then, select “Play” to play Girl Rising with the subtitled language.

AUDIO SPECIFICATIONS

You have the option of using 2.0 stereo or 5.1 (Dolby Digital) surround-sound audio. You can choose which audio playback you prefer in the “Setup” menu.

Venues set up for 5.1 DD audio will deliver the best playback; your event staff will be able to let you know if this is the case. In the absence of 5.1 DD audio, we suggest that you run audio through a sound mixer for higher quality sound.

A word of caution: if your AV staff runs Girl Rising audio directly from the player into a set of speakers, the audio may be distorted.
