Nurturing Success in All Children
Brain Integration Technique Therapy

Promotes a more optimal brain function and development, improving coordination and balance. It helps in the development of fine and gross motor skills, and enhances reading, math, and writing skills. It is also beneficial for children with learning disabilities, ADHD, and autism.

Speech Language Therapy

Assists in language development, improving speech and language skills. It helps children with expressive and receptive language disorders, articulation issues, and stuttering.

Occupational Therapy

Addresses a variety of needs related to daily living skills, such as self-care, fine and gross motor skills, and sensory integration. It helps in the development of fine and gross motor skills, improving coordination and balance.

Physical Therapy

Improves motor skills, balance, and coordination. It helps in the treatment of conditions such as cerebral palsy, spinal cord injury, and multiple sclerosis.

How can Physical Therapy help?

- Improve mobility
- Improve motor skills
- Improve coordination
- Improve balance
- Improve posture
- Improve overall functional abilities

Pediatric Physical Therapy

The therapist assesses areas of concern and develops a treatment plan to improve function and independence. This includes activities such as strengthening, stretching, and balance training.

Pediatric Speech Language Therapy

The therapist assesses a child's语言 development and helps improve speech, language, and communication skills.

Pediatric Occupational Therapy

The therapist assesses and develops treatment plans to address deficits in daily living skills, fine and gross motor skills, and sensory integration.

Pediatric Occupational Therapy helps improve functions such as:

- Fine and gross motor skills
- Daily living skills
- Sensory integration
- Self-regulation
