As a growing resort community, traffic engineering and transportation-planning issues are important to the Town of Truckee. The Town has found it to be cost-effective to retain LSC Transportation Consultants, Inc. as the on-call traffic engineering and transportation planning staff to the Town. Selected through a competitive process, LSC is retained on a multi-year contract to provide these services on an as-needed basis. Services provided to the Town have included the following:

- Traffic volume and speed data collection
- Analysis of traffic impacts associated with private and public land development applications
- Evaluation of intersection improvements
- Assessment of traffic safety issues
- Preliminary design of roundabout design
- Assistance in development of Town Circulation Element policies
- Peer review of traffic studies submitted to the Town
