Project: Monitoring emotional wellbeing via a mobile phone app

Nikki Rickard

Department of Psychological Sciences

Phone: +61-3-9903 2221

email: nikki.rickard@monash.edu

Your child would like to be part of a research study. Please read this Explanatory Statement in full before deciding whether or not you agree to them participating in this research. If you would like further information regarding any aspect of this project, you are encouraged to contact the researcher via the phone number or email address listed above.

What does the research involve?

The aim of this study is to explore whether people's mobile phone behaviours can help us understand or predict their emotional well-being.

If you agree for your child to be in this study, they will be asked to:

- (1) Download the "MoodPrism" app onto their smartphone (from either the Apple Store or GooglePlay store), and leave the app on during the 1 month research period
- (2) Give permission to the researchers to automatically access their mobile phone behaviours (anonymous). The type of data that you will be asked to give researchers access to will include your music use details (e.g., artists and songs, time you listen), social networking information (e.g., which apps you use and for how long, your friend network size, and some anonymous content) and your activity levels and locations. All this information will only be stored ANONYMOUSLY (without any way of linking it to you).
- (3) The app will ask them to complete a set of surveys at the start and end of the month. These surveys will take about an hour in total to complete, but can be broken up and completed at a few different times if they wish. The end surveys will only take about 20 minutes.
- (4) The app will also ask them to answer quick questions (less than 5minutes each) including a voice recording when prompted at different times on most days during that month
- (5) The app will also deliver some mental health messages to them. This will include information about their moods (which they can access at any time), whether they are flourishing. and after 2 weeks, information about depression and anxiety levels from mental health organizations such as Beyond Blue and Headspace.

Why was your child chosen for this research?

We are interested in how young people's emotional health (both good and poor) might be reflected in their use of mobile phones. We are therefore seeking all sorts of people (e.g., males and females, living in the country or city, who might be feeling emotionally healthy or might not be feeling that healthy), particularly those who are aged 13-24.

This invitation is being sent openly through websites and other means, and is a call for anonymous participation in this research.

Please note that your child will not be able to participate in this research if they:

- Are currently taking any psychotropic medication (e.g., antidepressants, or anti-anxiety drugs)
- do not own their own smartphone

Consenting to participate in the project and withdrawing from the research

After reading this, the app will ask both you and your child whether they want to be in the research. By clicking on the “I agree” button, you are consenting to your child being involved in the research and give permission for the researchers to access their mobile phone behaviours during the research (for 1 month).

If your child decides during the research that they no longer want to participate, they can withdraw from it at any time. The data already collected will already have been sent to us, and as it is not linked to their name in any way, we will not be able to find and withdraw that data.

Possible benefits and risks to participants

Being involved in this research has a number of benefits for your child:

- (1) They can enter a draw for one of two new ipads. Everyone who agrees to be part of this research and completes just 7 days will go into an iPad prize draw. For every week they complete after that, they will be awarded another entry in this draw, and if they complete the final surveys they will receive double entries to the prize draw.
- (2) They will receive regular messages from experts about emotional health. These might include suggestions for improving their emotional wellbeing, or perhaps some suggestions for what they might do if they are feeling down a lot or stressed a lot.
- (3) Your child will be helping us understand how mobile phones might be used to improve emotional wellbeing of young people like yourself.

Being involved in the research will however involve some regular time from them over this month, and this could be inconvenient at times. Some of the questions we ask are also personal, and about their emotions or mental health – these could cause some upset or concern.

We recommend that if they do feel any distress or concern when you are involved in this research, that they contact their doctor or school/university or work’s welfare officer to discuss this, or seek help from help services such as:

<p>Headspace Headspace provides mental and health wellbeing support, information and services to young people and their families across Australia. www.headspace.org.au</p>	<p>Kid’s Help Line Free 24 hour telephone counselling service for young people aged 5-18. Phone: 1800 551 800</p>	<p>Lifeline Australia Lifeline Australia is a 24/7 phone counselling service. Phone: 13 11 14 Website: http://www.lifeline.org.au/</p>

Confidentiality

All information we collect from the app about your child will be stored anonymously (without their name) on our secure and private servers. We will be publishing results of our study but there will be no way anyone could identify your child or their individual information when we do this. The only time we will ask for a name and contact details is if they wish to go into the draw to win one of the ipads for being involved in the research. However, their details will be kept totally separate from the other information about them collected by the app, and the two could never be linked.

Storage and use of data

During data collection, data will be stored confidentially on a secure storage site behind a firewall. Only the research team will be able to access the server, via SSH (encrypted tunnel). All communications with the server will be via HTTPS.

Your child's information may also be used for future research projects by the researchers, but again only anonymously and as group data.

Results

If you are interested in finding out the results of this study, you can contact us at the end of 2017, when all data will have been analysed. Please contact nikki.rickard@monash.edu, and you will be advised where you can access our findings.

Complaints

Should you have any concerns or complaints about the conduct of the project, you are welcome to contact the
