1. This detail supersedes prior subdivision street standards detail number 14.
1. THIS DETAIL SUPERSEDES PRIOR SUBDIVISION STREET STANDARDS
   DETAIL NUMBER 15.
Town of Marana Utility Easement Requirements

1) Easements shall be exclusive Town of Marana wet utility easement with maximum 5’ encroachment by a PUE.
2) Easement width shall be increased by 5’ for every 2’ water line is buried below the minimum as required by the May 2009 or subsequent version of the Town of Marana Utility Department General Notes and Standard Details.
3) Easement width shall be increased by 10’ for every additional variety of wet utility (potable water, non potable water, sewer). For example, the easement width shall be increased to 35’ if two types of wet utilities are located within the easement, and to 45’ if all three types of wet utilities are located within the easement.
4) Easement width shall increase by 5’ where the easement overlaps a vertical drop of 3 or more feet where the slope is greater than 3:1 horizontal to vertical. The easement width shall increase by 10’ if the slope exceeds 2:1 horizontal to vertical.
5) The maximum wet utility easement, including increases for depth, PUE encroachment, additional wet utilities and slope, shall not be greater than 50’.
6) Wet utility line shall be a minimum of 5’ from the edge of the easement.
7) Wet utility line shall be set back an additional 2’ from the edge of the easement for every 5’ in depth the line is buried below the minimum depth.
8) A 15’ x 15’ easement area outside of the normal easement width shall be provided for all fire hydrants.
9) A 15’ x 15’ easement area outside of the normal easement width shall be provided for all meters, valves and fire line stub outs.
10) Where Terrain and/or Geology warrant an exception to these standards, a waiver may be granted by the Town Engineer or his designee in which all of the following apply:
   a) A showing of good and sufficient cause
   b) A determination that failure to grant the waiver would result in exceptional hardship to the development.
   c) The waiver is determined to be the minimum relief necessary.
   d) Other mitigating design elements are utilized such as ductile iron pipe with restrained joints or other improvements as directed by the utilities engineer.

Cost shall not be a determining factor in the granting of waivers.

MARANA UTILITY STANDARDS

TYPICAL UTILITY EASEMENTS

NOT TO SCALE

DATE: 8/19/2009  REVISION: 12/24/2009  SHEET 1 OF 1
NOTES:

1. CURB RAMPS, INCLUDING LANDING AND THE INTERCONNECTING SIDEWALK ARE TO BE CONTAINED WITHIN THE RIGHT-OF-WAY.

2. DETECTABLE WARNING SURFACE SHALL BE CONSTRUCTED 2 INCHES AWAY FROM DEPRESSED CURB.

3. CURB RAMPS SHALL BE PERPENDICULAR TO ROADWAY CENTERLINE AND SHALL ALIGN WITH RAMPS ACROSS STREET.

4. GRADES ON SIDEWALKS LEADING TO OR FROM THE RAMPS SHALL FOLLOW CURB GRADES.

6. STOP BARS, IF REQUIRED, SHALL BE LOCATED 4' IN ADVANCE OF ANY CROSSTWALK STRIPING.

7. CURB INLETS SHALL NOT BE LOCATED WITHIN 10' OF A CURB RAMP.

8. GUTTER SHALL PROVIDE SMOOTH TRANSITION TO RAMPS.

A=4' MINIMUM, 1:50 SLOPE MAXIMUM
B=6' MINIMUM, 1:12 SLOPE MAXIMUM

Keith E. Brann, P.E.,
Town Engineer

EXPIRES 6/30/2019

STANDARD DETAIL

 TYPE 1 CURB RAMPS

DETAIL NO: 600-1

DATE: 10/2004 REVISED: 8/1/2016 SHEET 1 OF 2
NOTES:
9. DETECTABLE WARNING SURFACE TO CONSIST OF TWO TEK-WAY PANELS OF SIZE 24 INCHES BY 30 INCHES. COLOR OF PANELS TO BE TERRACOTTA.

10. TEK-WAY PANELS TO BE INSTALLED PER MANUFACTURER’S RECOMMENDATIONS. DETAIL ASSUMES SETTING PANELS IN WET CONCRETE. PROVIDE 1 INCH CAVITY IF SETTING PANELS SEPARATE FROM CONCRETE POUR.

11. PANELS TO BE PROTECTED FROM CONSTRUCTION DEBRIS/DIRT UNTIL OVERALL PROJECT COMPLETE.

12. ALTERNATE SYSTEMS SHALL HAVE DETECTABLE WARNING THAT CONSISTS OF RAISED TRUNCATED DOMES WITH A DIAMETER OF 0.9" AT BOTTOM, 0.4" AT TOP, AND A NOMINAL HEIGHT OF 0.2" AND A NOMINAL CENTER TO CENTER SPACING OF 2.35". COLOR MUST BE OF A DULL RED HUE. ALTERNATE SYSTEMS MUST BE APPROVED BY THE TOWN ENGINEER.

13. DEPRESSED CURB HEIGHT CALCULATED TO ACHIEVE A 1:12 SLOPE FROM THE FLOWLINE TO THE TOP OF DEPRESSED CURB FOR STANDARD BARRIER CURB USED IN THE TOWN OF MARANA AND MAY NOT APPLY TO ALL SITUATIONS. THE CONTROLLING FACTOR OF ALTERNATE DESIGNS SHALL BE A 1:12 MAXIMUM SLOPE FROM FLOWLINE TO TOP OF DEPRESSED CURB.
NOTES:

1. GRADES ON SIDEWALKS LEADING TO AND FROM THE RAMPS SHALL FOLLOW CURB GRADES.

2. CURB INLETS SHALL NOT BE LOCATED WITHIN 10’ OF A CURB RAMP.

3. GUTTER SHALL PROVIDE A SMOOTH TRANSITION THROUGH THE RAMP.

4. DETECTABLE WARNING SURFACE SHALL BE CONSTRUCTED 2 INCHES AWAY FROM DEPRESSED CURB.

5. DETECTABLE WARNING SURFACE TO CONSIST OF TWO TEK-WAY PANELS OF SIZE 24 INCHES BY 30 INCHES. COLOR OF PANELS TO BE TERRACOTTA.

6. TEK-WAY PANELS TO BE INSTALLED PER MANUFACTURER’S INSTRUCTIONS. DETAIL ASSUMES SETTING PANELS IN WET CONCRETE. PROVIDE 1 INCH CAVITY IF SETTING PANELS SEPARATE FROM CONCRETE POURED.

7. PANELS TO BE PROTECTED FROM CONSTRUCTION DEBRIS/DIRT UNTIL OVERALL PROJECT COMPLETE.

8. ALTERNATE SYSTEMS SHALL HAVE DETECTABLE WARNING THAT CONSISTS OF RAISED TRUNCATED DOMES WITH A DIAMETER OF 0.9” AT BOTTOM, 0.4” AT TOP, AND A NOMINAL HEIGHT OF 0.2” AND A NOMINAL CENTER TO CENTER SPACING OF 2.35”. COLOR MUST BE OF A DULL RED HUE. ALTERNATE SYSTEMS MUST BE APPROVED BY THE TOWN ENGINEER.

9. DEPRESSED CURB HEIGHT CALCULATED TO ACHIEVE A 1:12 SLOPE FROM THE FLOWLINE TO THE TOP OF DEPRESSED CURB FOR STANDARD ROLLED CURB USED IN THE TOWN OF MARANA AND MAY NOT APPLY TO ALL SITUATIONS. THE CONTROLLING FACTOR OF ALTERNATE DESIGNS SHALL BE A 1:12 MAXIMUM SLOPE FROM FLOWLINE TO TOP OF DEPRESSED CURB.
1. Grades on sidewalks leading to and from the ramps shall follow curb grades.

2. Curb inlets shall not be located within 10' of a curb ramp.

3. Gutter shall provide a smooth transition through the ramp.

4. Detectable warning surface to consist of two Tek-way panels of size 24 inches by 30 inches for type 3 ramps and size 24 inches by 24 inches for type 3a and 3b ramps - cut as needed. Color of panels to be terracotta.

5. Tek-way panels to be installed per manufacturer's instructions. Detail assumes setting panels in wet concrete. Provide 1 inch cavity if setting panels separate from concrete pour.

6. Alternate systems shall have detectable warning that consists of raised truncated domes with a diameter of 0.9" at bottom, 0.4" at top, and a nominal height of 0.2" and a nominal center to center spacing of 2.35". Color must be of a dull red hue. Alternate systems must be approved by the town engineer.

7. Depressed curb height calculated to achieve a 1:12 slope from the flowline to the top of depressed curb for standard barrier curb used in the town of Marana and may not apply to all situations. The controlling factor of alternate designs shall be a 1:12 maximum slope from flowline to top of depressed curb.

8. Ramp length to be a minimum of 6 feet. Ramp must be lengthened as necessary due to adjacent street slope to achieve either a 1:12 maximum slope up to a maximum length of 15 feet.
1. ALL IRRIGATION LINES GREATER THAN 3/4" IN DIAMETER SHALL BE PLACED AS SHOWN.
2. TREES SHOULD BE PLACED TO THE REAR OF A CURBWAY OR JUST OFF THE CENTERLINE OF A MEDIAN.
3. DEEP ROOT WATERING SYSTEMS ARE TO BE USED ON ALL LANDSCAPE PALETTES WITH TREES IN CURBWAYS OR MEDIANS.
4. 36" DEEP ROOT BARRIERS REQUIRED FOR ALL TREES WITHIN CURBWAYS.
5. 36" DEEP ROOT BARRIERS REQUIRED FOR MEDIAN TREES CLOSER THAN 6 FEET FROM CURB.
6. WHEN REQUIRED, ROOT BARRIERS SHALL EXTEND 5 FEET TO EITHER SIDE OF TREE MEASURED PERPENDICULAR TO PAVEMENT/CURB. TOP OF ROOT BARRIER EVEN WITH TOP OF FINISHED EARTHWORK/BELLOw ROCK MULCH.

MARANA ROUNDABOUT

DATE: 9/14/05
REVISED: SHEET 3 OF 3

APPROVED FOR DISTRIBUTION:

Keith E. Brann, P.E., Acting Town Engineer
KEY
SL - Storage Length (feet)
D - Distance between Arrows (feet)

NOTES:
1. Pavement Arrow Markings shall be used at left and right turn lanes at signalized intersections.
2. SL dimension is from stop line to end of turn lane.
3. For dual left lanes, dimensions shall be the same for each lane.
4. In some situations, the Town may require Pavement Arrow Markings at unsignalized intersections.
NOTES:
1. All materials and construction shall conform to the requirements of the Special Provisions and Standard Specifications.
3. For conduit size, location, and quantity, see Project Plans.
4. Anchor bolts shall be galvanized 3/4" x 12" x 4" complete with nuts and washers.
5. Anchor bolt’s projection above foundation shall be 2" min. 2 1/2" max.
6. Conduit projection above foundation shall be 2 1/2" min. 4" max.
7. Use an approved silicon sealer RTV type gray in color or clear, between cabinet and foundation.
8. In unpaved areas a raised concrete pad foundation (36" x width of cabinet foundation x 4" thick) shall be installed in front of the cabinet (door side). Pad shall be set 2" below the foundation elevation. Slope pad away from cabinet at a 50:1 slope.
9. All cabinet foundations shall have two (2) 3/4" diameter x 10' long bonded copper ground rod with clamp.
10. Install 1-4" conduit for future use, stubbed and capped 24" past the edge of the foundation as directed by the Town Engineer or His/Her Designee.
11. 1" sleeve (for each ground rod) shall be inserted when foundation is poured. Install one (1) 3/4" diameter x 10' long bonded copper ground rod in each sleeve.
12. 4" sleeves for service conduits if an Electrical Utility Service Entrance Requirement Committee (EUSERC) meter socket or EUSERC utility pull section and/or service disconnect enclosure are required.
13. Prior to pouring concrete foundation, final approval of conduit placement from Town Engineer or His/Her Designee shall be obtained.
14. Contractor is responsible to make sure cabinet fits on bolt pattern.

Note: It is intended that the Notes herein of the Traffic Signal Standard Responsibilities shall be considered part of the Construction Contract Documents. If the Project Plans differ from the notes herein (Town of Marana Standard Detail 730-400), the Project Plans shall note the change on the Project Plan's General Note Sheet and be edited where appropriate to fit the Project.

APPROVED FOR DISTRIBUTION: 6/20/2006
Keith E. Brann, P.E., Date
Town Engineer
GENERAL TRAFFIC SIGNAL NOTES (CONTINUED):

34. The Contractor shall coordinate with the telephone utility public improvement coordinator to verify the location of the telephone connection at each intersection.

35. The Contractor shall "pothole" or hand dig all foundations prior to the placement of all cabinets, and traffic signal and/or street light poles.

36. The Contractor shall not make or begin any excavation, digging or any work associated with moving any earth or ground within any public Town rights-of-way, utility easements, and/or any expressed or implied private property without first determining whether any underground facilities (shown and not shown on the Project Plans) will be encountered, and if so where they are located from each and every public utility, municipal corporation or other entity having the right to bury such underground facility within the public right-of-way, private property or easement within the Project limits. The Contractor shall take all necessary measures for the location and control of such facilities in a careful and prudent manner.

37. Any equipment and/or utilities within the project (shown or not shown on the plans) that is damaged or destroyed by the contractor shall be repaired or replaced at the sole expense of the Contractor.

38. The Contractor shall immediately report all conflicts regarding the overhead utilities and the Project signal equipment that is to be installed as indicated on the Project Plans to the Town Engineer and the utility of jurisdiction. If required, the Contractor shall coordinate all utility and/or traffic signal equipment relocation as required with the Town, the Engineer of Record and the Utility Company.

39. The Contractor shall pothole all utilities (shown and not shown on the Project plans) prior to boring, trenching, or directional drilling to verify depths and locations.

Note:
It is intended that Notes 1–39 of this Traffic Signal Standard shall be considered as part of the Construction Contract Documents. If the Project Plans differ from the notes herein (Town of Marana Standard Detail 730–401) the Project Plans shall note the change on the Project Plan's General Note Sheet and be edited where appropriate to fit the Project.

It is intended that Notes 40–41 of this Traffic Signal Standard be placed on the Project Plans in their entirety and edited where appropriate to fit the Project.

40. The Design Speed for _________ is _______ mph. The Posted Speed for _________ is _______ mph.

41. The Contractor is advised of the utility contacts as indicated in the following table:

<table>
<thead>
<tr>
<th>Utility</th>
<th>Contact</th>
<th>Phone No.</th>

</table>

(The designer shall coordinate, verify, and list all utility companies and contacts within the Project limits, and provide the correct information in the table above.)
GENERAL TRAFFIC SIGNAL NOTES (CONTINUED):

17. IMSA 19–1, 16-conductor solid wire cable shall be installed continuous and unspliced from the controller cabinet to the Type “A” or Type “G” pole on each corner. At locations where there are no Type “A” or Type “G” poles, the 16-conductor cable shall be installed to the No. 7 pull box on that corner for future use with a minimum of 30’ slack. See Town of Marana’s Traffic Signal Cable Schematic Standard Detail and Traffic Signal Wiring Schematic Standard Detail for details.

19. All vehicle detection loop wire shall be #14 AWG, IMSA 51–5–1985 cable. Detector lead-in cables shall be #14 AWG, IMSA 50–2–1984 cable. The detector lead-in cable shall be continuous and unspliced between the controller cabinet and the pull box adjacent to loop. Provide a minimum of 10’ of slack as measured from the lip of the pull box opening in the pull box adjacent to the loop detector.

20. All telephone interconnect cable, and detector lead-in cable shall be continuous and unspliced.

21. The video detection cable shall be installed, continuous and unspliced, from the video camera mounting (attached to the luminaire mast arm) to the controller cabinet.

22. The emergency vehicle preemption sensor cable shall be 3M-Opticom Detector Cable Model No. 138 or approved equal as specified by the Town Engineer or His/Her Designee.

23. The conductors for the emergency vehicle preemption sensor and beacon shall be routed to the traffic signal head at the mast arm tip or as specified on the Project Plans, Special Provisions and/or the Town Engineer or His/Her Designee. Provide lengths as required by the Town Engineer or His/Her Designee.

24. The location of preemption sensors shall be in accordance with Standard Details 730–410 thru 730–417 or as approved by the Town Engineer prior to the installation of the sensors. All vehicle detection loops shall be centered within the pavement of the travel lane or as approved by the Town Engineer.

25. Vehicle Detection Loops shall be installed prior to the final lift of pavement. For loops installed after the final lift, detection loop sawcuts shall be flushed with water under pressure and then dried with air under pressure prior to applying loop sealant.

26. All side by side 6’ X 6’ loops shall have a separate Detector Loop Lead–in Cable.

27. All signal housings shall be polycarbonate and black. All visors shall be painted black and material approved by the Town Engineer or His/Her Designee prior to ordering and installation.

28. All vehicular signal faces shall be 12 inch and all lenses shall be polycarbonate. All signal indications shall be LED, except the yellow ball and yellow arrow indications mounted overhead on a mast arm, which shall be incandescent. All yellow indications (yellow ball and yellow arrow) within a vehicular signal face, not mounted on an overhead mastarm, shall be LED. All Pedestrian signal faces shall be LED Countdown Style Pedestrian Signal Heads as provided in the MUTCD 2003 ed. (Section 6E.07).

29. There shall be a minimum of two circuits (each with a separate electrical phase) for the intersection safety lighting and internally illuminated Street Name Sign (ISNS) circuit. There shall be a minimum of two circuits provided to each pole’s hand hole with solid No. 10 AWG THHW conductors. The luminaires shall be wired such that circuit No. 1 luminaires are on its diagonally opposite counterpart. The other diagonally opposing luminaires shall be wired on circuit No. 2. The ISNS shall be wired using the opposite circuit from the luminaire, on the same pole, that the luminaires are wired. All ISNS shall be installed and wired from the pull box to the ISNS unspliced.

30. Three (3) No. 10 AWG–THHW Conductors shall be installed from each luminaire to the pole’s adjacent pull box that the luminaire is mounted on and shall be unspliced, leaving a minimum of five (5) feet of slack as measured from the pull box lip opening. Install a 15-amp in-line fuse for each luminaire in the associated #7 pull box.

31. For each luminaire circuit, three (3) conductors, THHW No. 10 AWG, shall be pulled from the power service cabinet to the poles adjacent pull box unspliced.

32. Prior to construction of pole foundations, grade slope to ensure that top of foundations are not exposed more than 6” above final grade. Grade all pole foundations, cabinet foundations, pull boxes and the like such that drainage of water flows away from the equipment being constructed and/or installed.

33. The Contractor shall contact the electrical utility public improvement coordinator to verify the service connection requirements and the location of the electric service connection for the traffic signal at each intersection. The Contractor shall be responsible for excavating and backfilling the trench and installing any necessary sleeves under sidewalks or driveways. The Contractor is responsible for installing the required conduit infrastructure between the service point and the RUPS/meter pedestal according to the utility electrical service provider’s requirements. The electrical utility will install the electrical cable in the conduit between these two locations or as provided on the Project Plans.
GENERAL TRAFFIC SIGNAL NOTES:

1. All equipment/materials and construction shall comply with the requirements contained in the Town of Marana Standard Details (latest edition), the Project’s Supplemental Specifications, the Special Provisions, the Project Plans, the 2003 Pima County/City of Tucson “Standard Specifications for Public Improvements”, and the Pima County/City of Tucson “Standard Details for Public Improvements”.

2. All pedestrian push button assemblies shall comply with current ADA requirements. The pedestrian pushbutton signs shall be the R10–3e as identified in the Manual on Uniform Traffic Control Devices (MUTCD), latest edition.

3. Internally Illuminated Street Name Signs (IISNS) shall be installed such that the sign is mounted directly to the vertical shaft of the pole, located above the sign, and positioned such that the sign is side mounted on the street side of the pole. The Contractor shall submit a sign detail and mounting detail to the Town for review a minimum of three (3) weeks prior to the estimated installation date for Town’s approval.

4. The exact location of each new pole foundation, pull box, controller cabinet foundation, and UPS/electric service pedestal foundation shall be approved by the Town Engineer or His/Her Designee prior to final placement, installation, and/or construction.

5. The top of the pole foundation shall be level and six (6) inches above the finished grade. Provide extended bolts for all pole foundations to allow for future elevation adjustments.

6. All Conduit, Cable, Wire, Poles, Posts, Signs, Equipment, Materials and Appurtenances supplied for the Project shall be furnished and purchased new and unused. The new equipment, materials and appurtenances shall be ordered and delivered for this specific Project only. The Contractor shall provide a submittal list of all proposed materials along with the material specifications to the Town for all materials to be incorporated in the Project to the Town Engineer for review and approval prior to construction. The Town Engineer shall inspect and approve the said requested equipment, material and/or appurtenances prior to use and/or installation. The said material in no way shall be used without written consent from the Town Engineer. The Town reserves the right to refuse to allow the installation of any and all equipment the Contractor submits for approval if it chooses without cause, justification and/or recourse. If Contractor installs the materials without prior written consent from the Engineer, the Contractor shall remove and replace the equipment with acceptable new equipment and/or material(s) at his/her sole expense.

7. All new conduit as shown on the Project Plans shall be installed a minimum of 36 inches below finished grade unless stated otherwise on the Project Plans or in the Special Provisions.

8. Any conduit installed shallower than 30 inches below finished grade shall be encased in concrete per Pima County/City of Tucson “Standard Specifications for Public Improvements”, 2003 edition, Subsection 732–3.01 (G).

9. Prior to the Town’s acceptance and prior to pulling conductor, cable, wire and/or fiber optic cables, all conduit(s) (new and existing) to be incorporated into the new system as provided for on the Project Plans shall be cleaned and blown out with compressed air in the presence of the Town’s inspector. A properly sized conduit piston or mandrel shall be pulled through the entire conduit system in the presence of the Town’s inspector prior to conductor, cable or wire installation to ensure that no obstructions or debris exist in the conduit. No water or moisture shall remain in conduit(s) prior to installing conductors.

10. Conduit installed under existing paved driveway(s), sidewalk(s), and pavement that are not scheduled to be reconstructed as part of the Project shall be installed by means of boring or directional drilling.

11. Pull boxes shall not be installed within concrete curb access ramp(s) or sidewalk(s). Any pull boxes installed behind curb(s) shall be installed between the curb and the proposed/future sidewalk in accordance with the Project Plans and Special Provisions. An exception to this requirement is permitted for pull boxes installed within a median or as otherwise called for on the Project Plans, Special Provisions, or by the Town Engineer or His/Her Designee.

12. Any pull boxes installed along an uncurbed roadway shall be installed adjacent to, but not within, the shoulder.

13. A \( \frac{3}{4} \)” diameter x 10’ long ground rod (copper) shall be installed in all #7, pull boxes used for the High Voltage Conductors. A \( \frac{4}{4} \)” diameter x 10’ long ground rod (copper) shall be installed in the home run pull box (No. 7 with extension) adjacent to the controller cabinet. Two ground rod clamps shall be furnished for grounding the wire on each ground rod.

14. Two (2) \( \frac{3}{4} \)” diameter x 10’ long ground rods (copper) shall be installed in the controller cabinet foundation a minimum of 8 feet apart. See Town of Marana’s Controller Cabinet Foundation Standard Details (730–210) for details.

15. The high voltage cables and conductors shall be separated from the low voltage cables and conductors, and shall be installed/constructed in separate conduit.

16. IMSA 19–1 20–conductor solid wire cable shall be installed continuous and unspecified from the controller cabinet through the No. 7 pull box on each corner to the poles traffic signal head wire splicing compartment.

NOTES:

1. A maximum of one (1) four-sided signal head (4-Q) shall be installed on the pole as shown.

2. The Designer shall provide additional structural analysis for any deviations from the dimensions shown which will result in increased structural loading.

3. Foundation shall be a minimum of 6' in depth as measured from the top of finished grade and a minimum of 3’ in diameter. All other foundation requirements shall adhere to Pima County/City of Tucson’s Standard Details for Public Improvements, 2003 Ed.

4. The total exposed area shall be measured by the largest exposed area of a single installed item. Items may include signs, traffic signal heads, controller cabinets, etc.
NOTES:

1. The Designer shall provide additional structural analysis for any deviations from the dimensions shown which will result in increased structural loading.

2. Foundation shall have a minimum depth as shown in Table C, and shall be measured from the top of finished grade. The foundation shall have a minimum diameter of 3'. All other foundation requirements shall adhere to Pima County/City of Tucson's Standard Details for Public Improvements, 2003 Ed.

3. The total exposed area shall be measured by the largest exposed area of a single installed item. Items may include signs, traffic signal heads, controller cabinets, etc.

NOTE:
See Traffic Signal Wiring Schematic Detail for cable connectivity to poles.

NOTES:
1. Splice permitted only at designated splice locations as shown on this plan. Each signal cable as shown shall be continuous and unspliced between the controller cabinet and the corner where it is terminated.

2. Provide 1 wrap of slack (5’ min.) for each signal cable at intermediate median pull boxes. (Typ.)

3. Provide 2 wraps of slack (8’ min.) for each signal cable passing through this pull box. (No splices permitted)

4. Provide 1 wrap of slack (5’ min.) for all signal cables terminating in this pull box.

5. Terminate 4, 7, 16, and 20 Conductor IMSA 19-1 cable in VC on the Ped. Post, Type “A”, Type “G”, Type “Q”, or Type “R” pole on corner. Provide 2 wraps of slack (8’ min.) in adjacent pull box.

6. Provide 1 wrap of slack (5’ min.) for each signal cable passing through the home run pull box (No. 7 with extension).

7. Terminate Video Cable (RG59 Cable, shielded), Data Cable (18AWG, Shielded), and Power Cable (3-12AWG CC) at Video Camera on pole designated by Project Plans or Town Engineer.

LEGEND:
○ Type “A” or Type “G” Pole (Typ. Location).
● Splice Location in Pull Box Only.

STANDARD DETAIL

TYPICAL TRAFFIC SIGNAL CABLE SCHEMATIC

DATE: 9/9/05
REVISED: 06/20/06
SHEET 1 OF 1

DETAIL NO: 730-702
*1–20 Conductor, ISMA 19–1, shall run from the Controller Cabinet to the pull box on the adjacent corner of the Type "R" and "Q" Poles unspliced.

No Splices Permitted In Median Pull Box. Provide 5' slack in all cables.

**1–20 Conductor ISMA 19–1 Cable

NOTES:

1 Install 1–4 conductor (ISMA 19–1) cable continuous and unspliced as shown to each of the following:
   - Pedestrian Pushbutton
   - Grounding Outlet Receptacle

2 Install 1–7 conductor (ISMA 19–1) cable continuous and unspliced as shown between each of the following:
   - The No. 7 Pull Box and the Outboard Vehicular Signal.
   - The No. 7 Pull Box and the Inboard Vehicular Signal.
   - The No. 7 Pull Box and the Sidemount Vehicular Signal.
   - The VC and the Far Left Mounted Vehicular Signal.
   - The VC and the Nearside/Right Turn Overlap Vehicular Signal.
   - The No. 7 Pull Box and the Pedestrian Signal Head.
   - The VC and the Pedestrian Signal Head/PPB.

3 Conectors to median shall be spliced in the pull box on the adjacent corner in the clockwise direction from the median.

4 Install 1–16 conductor (ISMA 19–1) cable continuous and unspliced as shown between VC (at type "A" or "G" pole) direct to controller.

5 2–No.12 AWG XHHW stranded white and blue conductors for EVPE beacon. Route beacon conductors direct to splice at No. 7 pull box.

LEGEND:

VC Vehicular Terminal Compartment
PC Pedestrian Terminal Compartment
• Splice Location in Pull Box

NOTE: Quantity of cables may vary based on actual field conditions or as directed by the Town Engineer.

APPROVED FOR DISTRIBUTION: 9/9/2005
Keith E. Brann, P.E., Acting Town Engineer

TOWN OF MARANA
TRAFFIC SIGNAL WIRING SCHEMATIC
STANDARD DETAIL
DETAIL NO: 730–703
DATE: 9/9/05 REVISED: SHEET 1 OF 1
NOTES:

1. Sawcut across corners at a 45° angle to minimize sharp angles in loop run.

2. One loop detector shall be installed per lane and it shall be located in the center of the lane.

3. Loops shall be installed in accordance with the requirements of Detail 1 when there is to be no additional surfacing.

4. Loops shall be installed in accordance with the requirements of Detail 2 when an overlay or top course is installed/constructed.

5. No splices permitted in loop wire.

6. Any pull boxes installed along an uncurbed roadway shall be installed adjacent to, but not within, the shoulder.

7. All pull boxes shall be located on the Project Plans with Station and Offset call-outs.

APPROVED FOR DISTRIBUTION:

Keith E. Brann, P.E., Date
