

# NOSTO

Design Laura Aalto-Setälä

## Installation instructions

### This package includes:

- 1 glass lampshade
- 8-9m sailing rope
- 1,8m fabric coated electric cord
- 1 aluminum cleat
- 1 hanging assembly
- 1 energy-saving bulb

1. Start by determining the wanted height.

2. Move the location of the knot if needed.

Instructions for the knot.

The knot loop is attached to the ceiling hook.

3. If needed, adjust the length of the cord by adding cord to the cleat or by taking cord out of it.

Note: If you only need to loosen or tighten the cord by <10cm, it is best just to loosen existing loops, and not to remove/add more loops.

When more cord is needed:

3.1. Loosen the uppermost loop on the cleat.

3.2. Convey the excess wire away from the cleat.

When less cord is needed:

3.3. Guide more cord to the cleat.

3.4. Loop the new cord onto one of the arms.

**4. If needed, undo and make the rope skein again.**

**4.1.**

**Note:** This step is easier, if you take the set up down where you can loop the rope on a table instead balancing the whole rope in your hands. This is especially advisable if you are new to tying ropes.

- 4.1. Undo the skein. Take 70-80cm of rope between your arms.
- 4.2. Start placing the rope into loops, on on top of the other.
- 4.3. Make sure the loop are of same size and are not crisscrossed.
- 4.4. When there is 150-170 cm of rope left, start turning the rope around the loops.

- 4.5. Make the remaining rope to go through the skein, around the holding rope and back.
- 4.6. Guide the end of the rope through the loop made in 4.5. and tighten.

**5. Place the glass lampshade inside the ropes.**

**Note:** It is better to do this step with assistance!

- 5.1. Take the lamp holder aside and keep it there until 5.4.
- 5.2. Lift the lampshade sideways into the loops.
- 5.3. Match the center of the lampshade to the rope intersection.

- 5.4. Place the lamp inside the lampshade carefully.
- 5.5. Straighten the lampshade carefully while holding the ropes still
- 5.6. All set!
