The Centers for Disease Control (CDC) Roybal Campus was expanding with multiple new buildings coming on line in a very short period of time. Their goal was to provide light and airy office space for researchers.

The office planning is related to the labs. The layout provides researchers opportunities for chance encounters throughout the office areas. Corner "window seats" are provided for casual discussions. Break rooms and support spaces are centrally located in circular forms. Open offices are located on both ends of the building providing natural light to all users.
