

# Botox FAQ

- How long will the results from Botox last?
  - Average Botox treatment lasts 3-4 months but can last longer with repeated treatments.
- How many treatments are recommended for optimal results?
  - Usually one treatment is necessary.
- How much down time is required?
  - None. You may go back to work and apply make up immediately following the treatment.
- How much does Botox cost?
  - Each patient's needs are unique and therefore cost depends on the individual but an average treatment area is about \$300-\$400 to get rid of frown lines or Crow's feet. Call our office and schedule a consultation with Dr. Keswani to see how much your personalized Botox treatment will cost.
- Do Botox injections hurt?
  - Topical anesthesia may be applied before the procedure to minimize discomfort, but this is usually not necessary as the treatment is almost painless.
- Are there any side effects?
  - As with most injectables, common side effects from BOTOX® include localized pain, tenderness, inflammation, redness, itching, bruising and/or swelling. These are normal side-effects from the result of an injection, and will disappear within a few days and can be easily treated with ice or covered with make up. However, most of our patients experience absolutely no side effects.
- When will I start seeing results?
  - Complete results of Botox are seen within 2 weeks.
