

SMART INFRASTRUCTURE
#SmartInfra2017

**Ashton Gate Stadium, Ashton Road, Bristol, BS32EJ
30th October, 11am-3pm**

Zeetta Networks, with our friends at Ashton Gate Stadium and associated vendor partners, will be showcasing our cutting edge NetOS open programmable network platform at our inaugural Zeetta Networks Event – Smart Infrastructure 2017.

The theme of our event this year is ‘Smart Leaders for Smart Venues’.

In addition to solving complex operational issues, our NetOS® system creates a new source of business data. This provides a user-friendly programmable network environment, which is critical to a cohesive digital strategy, providing an opportunity to generate new revenues, e.g. greater fan engagement for sports venues.

To maximise the gains of smart infrastructure, an organisation should be prepared to adapt its working culture to fit.

While Zeetta presents its innovative NetOS platform for Software Defined Networks, our guest speakers will provide the business context to investing in Smart Infrastructure. They will share valuable insight to leading an organisation through this smart infrastructure evolution.

If you are looking into developing your smart infrastructure, we would like to see you at this invitation only event.

Please RSVP to reserve your place: james.hill@zeetta.com
