VINTAGE QUALITY INDEX

JANUARY - 2016

RISKSPAN VINTAGE QUALITY INDEX

January-16

JANUARY 2016

VINTAGE QUALITY INDEX:

88.70

The VQI provides an indication of the underwriting standards associated with a particular vintage of mortgage loans.

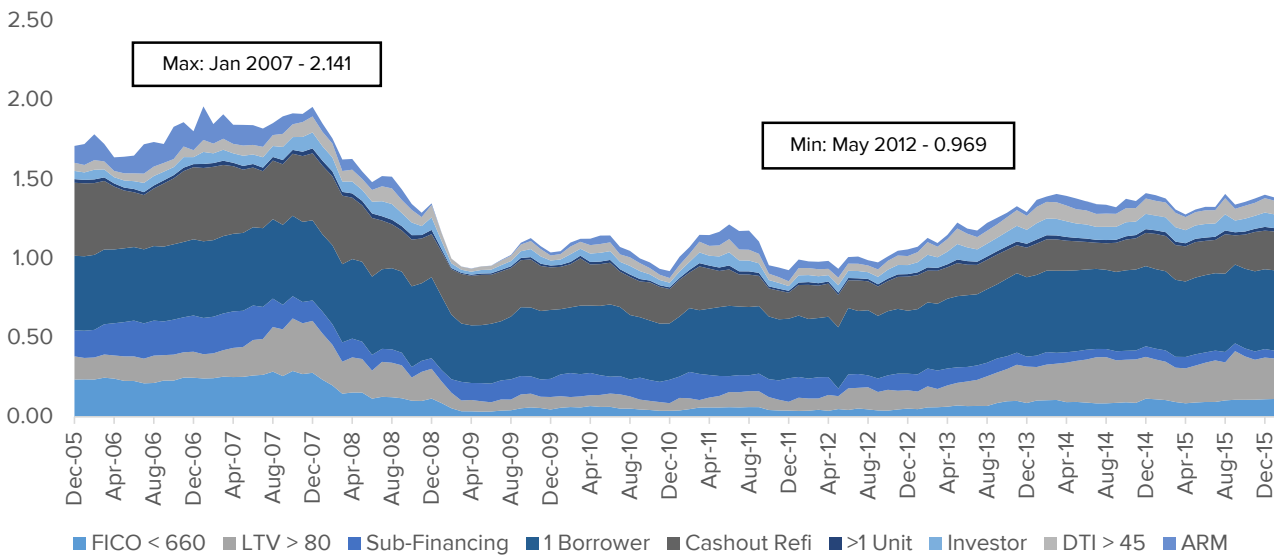

Values below 100 indicate tight underwriting standards relative to January 2003.

RiskSpan VQI Historical Trend

Current (January 2016) Risk Layers: $\frac{1.37}{1.53} \times 100 = 88.70$ Jan 2016 VQI

ANALYTICAL AND DATA ASSUMPTIONS

Population assumptions:

- Issuance data for Fannie Mae and Freddie Mac.
- Loans originated more than three months prior to issuance are excluded because the index is meant to reflect current market conditions.
- Loans likely to have been originated through the HARP program, as identified by LTV, MI coverage percentage, and loan purpose, are also excluded. These loans do not represent credit availability in the market as they likely would not have been originated today but for the existence of HARP.

Data assumptions:

- Freddie Mac data goes back to 12/2005. Fannie Mae only back to 12/2014.
- Certain fields for Freddie Mac data were missing prior to 6/2008.

GSE historical loan performance data release in support of GSE Risk Transfer activities was used to help back-fill data where it was missing.

An outline of our approach to data imputation can be found in our VQI Blog Post from October 28, 2015.
