

NTE ENERGY

Partner Professional Program

NTE Energy focuses on the development and acquisition of strategically located electric generation and transmission facilities within North America. The team executes all aspects of project development, from initial market and site evaluations and permitting to financing, construction and operation. NTE Energy is actively developing three projects located in Southwest Ohio, West Texas and North Carolina as well as pursuing early-stage opportunities in several other locations.

NTE Energy's staff experience includes extensive marketing, engineering and development roles for combined cycle, simple cycle, gas pipeline, biofuels and biomass projects, both domestic and international. The NTE Energy team leverages its experience to provide targeted services with efficiency and responsiveness.

To ensure that NTE Energy is able to provide its clients with outstanding service and to leverage the knowledge and experience of a wide range of professionals, we offer a selected group of retired senior executives, experienced consultants and other qualified individuals the opportunity to participate in our Partner Professional program.

As a Partner Professional, NTE Energy will include you on a contracted basis. NTE Energy's Partner Professional program offers many of the benefits associated with independent consulting without the headaches of managing administrative and bookkeeping functions, business development or insurance. Some of the benefits of the Partner Professional program include:

-) A flexible work schedule and environment which allows you to decide the level of commitment that fits your lifestyle;
-) Ability to work remotely from a home office location with complete back-office support, including management of client billings, collections and other administrative tasks;
-) Access to NTE Energy's cloud-based office systems, including an NTE Energy email account, time management software, receptionist/administrative services, and the other tools necessary to provide services to clients;
-) Ability to work with NTE Energy's diverse set of clients and our strong business development team;
-) Liability insurance policies that enable you to work on virtually any size client matter
-) Supplementary compensation associated with any new clients or client matters that you develop for NTE Energy.
