- “**Gimme that Back**” no longer gives **Focused**.
- **Raiding Operation** adjusted to be 12” range with a 6 vs 8 TN that increases by +2 for each model chosen to discard an Upgrade.

The Brewmaster, *Moonshiner*

- **Barroom Brawl** adjusted to “After this model moves itself or another model, it may reduce the **Poison** Condition of the moved model by 1 to have an enemy model in base contact with the moved model suffer 1 damage. Each enemy model can only suffer 1 damage this way per Activation (or Start Phase).”
- **Tipsy Slide** adjusted to “During the Start Phase, choose up to three models with the **Poison** Condition within 18. Push each chosen model a number of inches equal to the half the value of their **Poison** Condition (to a maximum of 5”).”
- **Another Round** adjusted to “**Shockwave** 2. **Wp** 14, **Poison** +2. Push any models that failed to resist this Shockwave up to 3”. Models can only be Pushed this way once per Turn.”
- **Open the Gourd** effect is now until the End Phase.

EXPLORER'S SOCIETY

Maxine, *Monomaniacal*

- **Converging Ley Lines** text that says EVS can choose to fail is removed.
- **Converging Ley Lines** TN and TN to resist the **Shockwave** both adjusted to 13.
- Each model can only Heal from **Breachburnt** once per Activation.
- **Aetheric Tear** gives **Staggered** instead of **Injured**.
- **Aetheric Tear** stat reduced from 6 to 5 and now resisted by **Mv**.
- **Split Across Worlds** now gives **Staggered** to the target.

Nexus, *One of Many*

- **Many Voices** makes Shambling Nests lose Totem (Nexus).

CORE RULES MANUAL (FREE ONLINE VERSION) ERRATA

Page Numbers

Adjusted to account for new pages added to book

Pg 2. Introduction

Adjusted Introduction for inclusion of Explorer's Society.

Pg 3. The Crew

Added text to end of section "You can learn more on how to hire a crew in Step H of Encounter Setup on page 44."

Pg 6. Upgrade Limitations

Added 2 additional limitations replacing Waldo's Walkthrough

- **Crew (X):** This Upgrade is automatically added to your Crew at the start of the game if your Crew contains any models with the X Keyword. This Upgrade is considered Attached to the Crew's owner instead of a single model.
- **Double-Sided:** This Upgrade has different names and effects on each side and can be flipped throughout the game by various effects. When a Double-Sided Upgrade is added to a Crew, it can start with either side face-up, unless otherwise stated on the card. Only the face-up side of the Upgrade is considered in play.

Pg 7. Red Joker

Description adjusted to "... and has one suit (or no suit) of its owner's choosing."

Pg 10. Duels

Removed 4th paragraph

Pg 11. Step F

Added the following after the first sentence: "Any cards currently in the Conflict are discarded."

Pg 11. Relenting

Replaced Basse Image with the following new Section:

Relenting

Relenting a duel is a way for a model to voluntarily fail a duel it is taking, without flipping any additional cards.

If two friendly models are in an opposed duel, the owner of the resisting model may choose for it to relent before any cards are flipped. If it does, the relenting model (but not the acting model) skips Steps "A" through "E" below. The relenting model's final duel total is treated as being the same as the acting model's final duel total.

If a model is in a simple duel generated by any friendly model, its owner may choose for it to relent and fail the duel before any cards are flipped. If it does, the relenting model skips Steps "A" through "E" below. The relenting model's final duel total is treated as 0 for this duel.

Pg 14. Moving

Removed 5th & 6th Paragraph and Falling Example

Pg 15. Push & Place

Moved sections to Pg 14

Pg 15. Falling

Added new Section:

Falling

"If a model ever has less than 50% of its base supported by terrain or the table, that model falls and then continues any remaining portion of its movement as normal.

When a model falls, its base is moved straight down (this does not expend any movement) until it is flat on terrain or the table, the model then suffers damage equal to half the distance it fell in inches (rounded down). If a model would end this fall overlapping another model or impassable terrain, it must continue its movement so that it does not end overlapping a model or impassable terrain; if a model does not have enough movement to do so, then it will not fall from the initial terrain and instead stops moving with 50% of its base still supported by that initial terrain."

Pg 15. Falling Example

Changed second sentence to "As soon as over 50% of Rasputina's base is no longer on the terrain or the table, she falls and suffers damage equal to half the distance fell, rounded down and then continues her move forward toward Pandora so that her base is not overlapping the box. If Pandora only moved Rasputina 1" to the left, Rasputina would not fall, as although her base would be moved normally be moved over 50% over the side of the box, because she cannot finish the move not overlapping the box (1" doesn't provide enough movement to do so), she does not fall and instead stops moving when her base is still 50% still on the Box."

Pg 15. Climbing

Added new Section

Climbing

“When resolving a **Walk** Action (see pg. 22), a model may move vertically along Climbable Terrain. To do so, it uses any amount of its movement to move vertically instead of horizontally. If a model moves in this way, it does not fall during this movement so long as it remains in base contact with the terrain. If the model's base is not at least 50% supported by terrain or the table at the end of this Walk Action, it falls as normal, unless it immediately takes an additional Walk Action to continue climbing (if able).”

Pg 16. Line of Sight

Paragraph 2 changed last sentence to “Models always have LoS to themselves (even while Buried) and always have LoS to any object or terrain they are in base contact with or overlapping”.

Pg 17. Line of Sight and Size

Added new Paragraph: “When determining Line of Sight, models with a **Sz** of 0 (ignoring the Ht of any terrain they are standing on) are treated as higher than any terrain with Ht equal to what they are standing on (the model is still **Sz** 0).”

Pg 17. Line of Sight and Size

Added visual example of this change.

Pg 18. Shadow example

Adjusted incorrect pronoun for Dashed Barker.

Pg 21. Activation Phase Step C.2

Changed to “Models may take up to two Actions during their Activation. This is referred to as a model's Action Limit. These Actions are resolved one at a time, with each Action fully resolving (including any Triggers) before the next Action begins (see Actions on pg. 22). If an Encounter's Size (see page 42) is 50 Soulstones or higher, all Leaders and Master models treat their Action Limit as three instead of two.”

Pg 22. Walk

Adjusted second sentence to “This move cannot be used to leave the engagement range of models engaging this model.”

Pg 23. Targeting Restrictions

Added new restriction “*Non-Leader*: This Action cannot target Leaders of either Crew, nor can it target any model with the Master Characteristic.”

Pg 24. Black Joker

Adjusted to “the damaged model suffers 0 damage (which cannot be modified) and does not generate any ☠ (if applicable).”

Pg 25. Healing

Step 5 changed “Increase a model's Heal” to “Increase a model's Health”

Pg 26. Friendly, Enemy, & Control

Added new subsection:

Friendly / Enemy-Controlled

- A model is friendly-controlled if it is currently controlled by its own Crew, owner, or a model in its Crew.
- A model is enemy-controlled if it is currently controlled by an enemy Crew, player, or model.

Pg 26. Friendly, Enemy, & Control

Added new Paragraph:

Additionally, if a model is ever resisting an opposed duel, the model is always controlled by its owner.”

Pg 28. Strategy Markers

Added two new paragraphs:

“If a Strategy Marker would be Dropped by a Strategy and cannot be Dropped in the indicated location, the player with Initiative must instead Drop the Strategy Marker as close as possible to the indicated position and in a way so that both players agree that it has no additional beneficial effects for either player. If the Marker cannot be Dropped in such a way, it is not Dropped.

If Strategy Markers are Dropped by players during Setup, they may not be Dropped in a way that would prevent the remaining Markers from being Dropped.”

Pg 29. Burning

Added missing period at end of section

Pg 29. Focused

changed to “Before performing a duel, this model may lower the value of this Condition by one to receive a  to the duel and if used during an opposed duel, may have any resulting damage flip receive a . Models cannot have more than **Focused +2** at any time. Canceled by **Distracted**.

Pg 29. Poison - Added missing space after possesses.

Pg 31. Math - Moved to page 32 - replace second paragraph with “In most cases where you are dividing any number, you will need to round any fractions. In these cases, always round the sum up to the nearest whole number (unless otherwise stated).”

Other exceptions to this are:

- Dividing movement distance, which is not rounded.
- Determining if a model is at half (or more/less) of a value (such as maximum health), which is not rounded.
- Determining damage from falling which is rounded down.

Pg 32. The Area Between

Added new section:

“Some effects in Malifaux affect all objects (models, markers, etc) in the area between two or more other objects.

To determine the area between two objects, draw a series of imaginary straight lines from the outside of each of the objects connecting them to form the largest possible polygonal shape, with each object as a corner of the polygonal shape.

Any objects whose base is at least partially within this shape (including the objects used to create the shape and any anything overlapping their bases) are within the area between these objects.”

Pg 33. Summoning

Added at end of section “Additionally, Summoned models cannot take the **Interact** Action to affect Strategy Markers in any way for the entire encounter.”

Pg 37. Terrain

Paragraph 3 reworded to - “Any time a model’s base is touching terrain (either overlapping or in base contact), that model is both in that terrain and considered within 0” of that terrain.”

Pg 37. Aura Terrain

Added new section:

“Some models in Malifaux have can create terrain within an aura around themselves or another object through Actions such as **Spread Roots** or **Vent Steam**, etc. These auras are treated as terrain for all purposes and any model within that aura is treated as in base contact with that terrain.”

Pg 38. Hazardous Terrain

Changed entire section to:

- “After a model resolves any of the following, it suffers the effects of Hazardous Terrain after the current Action or Ability is resolved (to a maximum of once per Action or Ability):
- Moving through Hazardous Terrain.
- Moving into base contact with Hazardous Terrain.
- Resolving an Action while in Hazardous Terrain (even if that Action removes the terrain).
- After a Hazardous Terrain Marker is moved and comes into base contact with the model; the model moving the Marker may choose to ignore the Hazardous effects of the moved Marker.
- Most of the time, Hazardous Terrain will resolve a specific effect for the model, such as Hazardous (**Burning +1**) giving **Burning +1** to the model. If the Hazardous Terrain does not mention an effect in its description, the model simply suffers 1 damage.”

Pg 39. Buildings (Flat and Steep)

Changed X to be “height in inches (rounded to the nearest whole number).”

Pg 40. Fences and Walls

Changed X to be “height in inches (rounded to the nearest whole number).”

Pg 40. Hills

Changed third paragraph to: “Hills count as Height X, Blocking, Climbable Terrain. The Height Trait of a Hill varies depending upon where a model is standing on it; X is equal to the distance between the lowest part of the model’s base and the table in inches (rounded to the nearest whole number).”

Pg 40. Obstacles

Changed X to be “height in inches (rounded to the nearest whole number).

Pg 40. Staircases

Changed X to be “height in inches (rounded to the nearest whole number).

Pg 41. Special Terrain

Added Section on Special Terrain from MoM book

Pg 42. 1. Encounter Set Up

Changed to 1. Encounter Setup

Pg 42. Encounter Order

Added new Step E. Choose Deployment (Step E-K changed accordingly)

Pg 42. Encounter Order

Swapped Steps I. Choose Schemes and J. Deployment

Pg 42. Encounter Setup

Replaced “ten” with “twelve” and “J” with “L”

Pg 43. Determine Scenario

Paragraph 2 added sentence - “Additional Strategy and Scheme Pools can be found for free on the Malifaux Crew Builder App.”

Pg 44. Added Step E – Choose Deployment

“The Attacker chooses a Deployment Zone for their model Deployment in Step J”.

Pg 45. Step I Choose Schemes

Moved to Step K (after Deployment).

Pgs 42 – 45. Steps E–K

Adjusted Step lettering based on above changes

Pg 41. Choose Additional Masters

Added paragraph: “Additional Masters hired into a crew are treated as a Leader for all effects that refer to “non-Leader” but no other effects.”

Pgs 46 – 49. Strategies & Schemes

Adjusted to most recently updated version of each Strategy or Scheme.

Pg 12. Actions Generated by Triggers

Adjust last paragraph to “Bonus Actions generated by Actions, Abilities, or Triggers may be taken even if the model has already taken a Bonus Action during the current Activation and do not count against a model’s one Bonus Action per Activation limit.

Pg 22. Actions

Adjust last paragraph to “...costs, targeting restrictions, and/or...”

Pg 22. Bonus Actions

Adjust last sentence from “...generated by a Trigger.” to “...generated by a Action, Ability, or Trigger.”

Pg 22. Add the following General Action

Slam: Target an Impassable Marker or any one Destructible Terrain piece within 1”. If the target is Destructible remove it from play, otherwise Place it within 1” of this model.”

Pg 23. Step 1

Add “Some actions have special restrictions. If these restrictions aren’t met, the Action cannot be declared.”

Pg 23. Step 3

Adjust first sentence to “In addition to Special Restrictions and costs, some Actions have targeting restrictions also written in italics and restrict the Action in some way, such as limiting the Action to targeting Construct models only or targeting Scheme Markers.”

Pg 23. Special Restrictions

Rename to “Action Restrictions” and adjust text of first paragraph to “Some Actions or Triggers have various restrictions written in italics at the start of the effect. These Restrictions can be either Special Restrictions or Targeting Restrictions.”

- **Special Restrictions** – Special Restrictions are those that limit an effect to only being declared in specific circumstances such as “Once Per” effects (pg. 33) or more complicated restrictions like “This Action cannot be taken while within 1” of Blocking Terrain”.
- **Targeting Restrictions** – Targeting Restrictions are those that limit what objects an Action can target (Step 3: Targeting). If a Trigger has a targeting restriction, then it cannot be declared if the target of the Action does not meet the Trigger’s targeting restriction. Listed below are the basic targeting restrictions:
 - **Enemy:** This Action must target an enemy model.
 - **Friendly:** This Action must target a friendly model.
 - **X only:** This Action must target a model with X Characteristic, Keyword, Name.
 - **Other:** This Action must target a model other than the one declaring this Action.
 - **X Marker:** This Action must target an X Marker.

Pg 25. Healing

Adjust this paragraph to the following: “When a model Heals, it gains an amount of Health equal to the healing effect using the timing structure below. If any effects are generated during this timing structure, that effect is resolved after completely resolving all steps of the Heal timing, in the order in which the effect was generated.

If multiple models Heal at the same time, resolve the Heal timing of each model completely one at a time.

- **Determine the amount to be Healed** – If there is a variable flip involved in the Heal effect, flip for this now (including any Accuracy modifiers from opposed duels).
- **Would Heal** – Resolve any effects that would happen if a model would Heal. If this would cause the model to no longer be Healed or the amount Healed is reduced to 0, skip any remain steps of this Timing Structure.
- **Check Maximum Health** – If the model is at its Maximum Health, it cannot be Healed and the Heal effect fails skipping steps 4-6 of this timing Structure.
- **When Heal** – Resolve any effects that would happen when a model Heals. If this would cause the model to no longer be Healed or the amount Healed is reduced to 0, skip any remain steps of this Timing Structure.
- **Increase the model’s Heal** – The model increases its Health by an amount equal to the final heal amount. If this would increase a model’s Health above its Maximum Health, any additional Healing is ignored (as though it did not occur).
- **After Heal** – Resolve any effects that would happen after a model Heals.
- **Excess Healing Effect** – If an effect would occur as a result of a model Healing in excess of its Maximum Health, that effect resolves now.

Pg 29. Burning

Add the following Text to **Burning** “(to a maximum of 5 damage).”

Pg 29. Poison

Add the following Text to **Poison** “(to a maximum of 5 damage)” to the first sentence.

Pg 33. “Once per” Effects

Change “limitations” to “Restrictions” and “limited” to “Restricted”.

Pg 33. Choosing to Suffer Damage

Adjusted to “Choosing to suffer Damage or be Killed” – Adjusted last sentence to “...or below. Additionally, while a model is controlled by an opposing player, it can never choose to Kill itself with an ability or Action.”

Pg 37. Destructible

Change Text to: Models can target this terrain with the **Slam** Action (Pg. 22) to remove it from play. If a model is standing on Destructible Terrain when it is removed, that model falls.

CORE RULES MANUAL (FREE ONLINE VERSION) ERRATA

Pg 15. Toward and Away

The Rules for Toward and Away were adjusted to the following:

If an object is moving "away from" or "toward" another object, the player controlling the move must choose a single point on each object as reference points. Then move the object in the most direct path so that the two reference points are furthest from or closest to each other as possible (as appropriate).

In both cases, unless the moving object is being Pushed, it will move around things that would impede its movement (such as terrain with the Impassable or Severe traits, as described on pg. 37), provided that doing so will get the reference points as close or as far from the each other as possible (as appropriate).

When resolving a "toward" move, the moving object's reference point cannot be moved further from the other reference point during the move, even if doing so would ultimately bring it closer at the end of the movement.

Similarly, when resolving an "away" move, the moving object's reference point cannot be moved closer to the other reference point during the move, even if doing so would ultimately bring it further away at the end of the movement.

Pg 23. Resolving Actions

Added reference to Step 6 (After Resolving) to Resolving Actions Steps.

Pg 23. Resolving Actions – Step 3 Targeting – Paragraph 2

Change the text of the 3rd sentence, to "... it fails; skipping steps 4,5, and 6."

Pg 28. Drop and Create – Paragraph 1

Change the text of the first sentence of Bullet 2 from "...except for the model creating them" to "...except for the model creating them, unless specified otherwise by the effect Creating the Marker."

Pg 29. Conditions – Paragraph 2

Change the text of the last sentence to: “Additionally, a model cannot have both Slow and Fast at the same time, if it gains one and it already has the other, both are immediately removed. Same for Focused and Distracted, if a model gains one and it already has the other, the values of each are immediately reduced equally until only one remains. Effects that would resolve after gaining a Condition, do not resolve after gaining that Condition if it is immediately fully removed this way.

Pg 29 Focused +X

Add the following text: “Models cannot have more than **Focused +2** at any time. Canceled by **Distracted.**”

Pg 29. Distracted +X

Add the following text: “Canceled by **Focused.**”

Pg 29. Assist Callout

Callout Removed.

Pg 30. Aura and Blasts

Sections swapped places.

Pg 30. Blasts

Add the following paragraph to the end of this Section: “After any effect that Dropped Blast Markers is fully resolved, the Blast Markers are removed. Though other Markers that may be used as a Blast Marker for the Action stay. Any effects that would resolve after an unspecified Marker is removed are not resolved after removing Blast Markers.”

Pg 31. Shockwaves – Paragraph 1

Change the text of the last sentence to: “Any effects that would resolve after an unspecified Marker is removed are not resolved after removing Shockwave Markers. Below is an example Shockwave Action.”

Pg 32. Summoning – Paragraph 6

Change the text to: “If an effect would Summon a model and does not require an Upgrade to be Attached, the Summoned model instead gains a Summon token. Models with Summon tokens are treated as having a Summon Upgrade for all effects that specifically reference Summon Upgrades. On the turn they are Summoned, Summoned models cannot take the Interact Action and are ignored for friendly Schemes and Strategies.”

Pg 38. Hazardous – Paragraph 1

Change the text of the first sentence from “...one of its Actions while in Hazardous Terrain, ...” to “...one of its Actions while in base contact or while in Hazardous Terrain, ...”

Pg 40. Tall Terrain

Change the “Tall Terrain” Callout to “Large Terrain” and add the following text: “Additionally, it is not recommended to have large (more than 6” across in any direction) pieces of terrain on the table. However if this is your only option, players are recommend to define the terrain in sections as separate pieces for game purposes (such as splitting a large train track into several pieces of terrain defining each section of track as an individual terrain piece.)

Pg 42. Encounter Setup Steps

Add a new Step (F) to Encounter Setup (all other steps move down as appropriate and on Pg 40):

F. Choose Additional Masters (adjust pg. 40)

After Leaders are revealed, each player may secretly choose whether or not to hire additional Masters into their Crew. If they choose to do so, they must now select those Masters they wish to hire from their declared Faction, so long as their total combined Cost of selected Masters is less than half this encounter’s size.

Then, after both players have chosen whether or not to hire additional Masters, they must simultaneously reveal their choice (and any Masters selected) to their opponent.

When hiring Crews (step G), each player that chose to hire an additional Master must hire those chosen Masters (Including the cost of 1 additional Soulstone to hire for those that don’t share a Keyword with your Leader).

Pg 12. Actions Generated by Triggers Callout – Paragraph 2

Change the text of the paragraph to: “Actions generated by Triggers (and any subsequent Actions generated) cannot declare Triggers, and like other generated Actions, they do not count against a model’s Action limit.”

Pg 19. Shadow Diagram

Edges of Shadow Diagram are rounded.

Pg 30. Blasts – Paragraph 3

Change the text of the paragraph to: “All models, except the original target, whose bases are in base contact with one or more ☠ take damage that is one segment lower than the category of damage flip against the target (e.g., if the target took Severe damage, the ☠ will do Moderate damage). For Weak, any resulting ☠ deal 1 damage.”

Pg 33. Bury – Paragraph 3

Add the following sentence: “If a model would be Unburied but cannot be because of an effect such as Laugh Off, Planted Roots, or Staggered, it may still be Unburied as above, ignoring such an effect.”

Pg 34. Damage Timing – Paragraph 1

Change the text of the first paragraph to the following text: “When a model suffers damage, it follows the timing structure below. If any model suffers damage as a result of an effect generated during this timing structure, the damage timing for that model is resolved after completely resolving all (6) steps of the initial damage timing, in the order in which the damage was generated. If multiple models suffer damage at the same time (such as from a Shockwave or ☠), resolve the damage timing of each model completely one at a time.”

Pg 37. Terrain Traits – Climbable

Add the following sentence: “If a model ignores this terrain trait, it may still move vertically up and down along the sides of this terrain.”

Pg 37. Unaffected by Terrain – Concealing

Change the name of the Concealing section from Concealment to Concealing.

Pg 43. Deployment – Paragraph 1

Change the text of the paragraph to: “The Attacker chooses a Deployment Zone and divides their Crew into two groups (with any number of models in each group). The Defender chooses one of those two groups, and the Attacker deploys that group completely within the chosen Deployment Zone.”

Pg 43. Titles – Paragraph 1

Change the text of the second sentence to: “As such, two versions of a single character cannot exist in the same time period.”

Pg 32. Replace

The Rules and Steps for replacing models were adjusted to the following:

1. Place each new model into base contact with any of the original models. If any cannot be Placed or cannot be added due to model limits, the Replace effect is canceled.
2. Each new model’s Health is set to the total Health of all original model’s combined or to the new model’s maximum Health, whichever is lower. If the Replace effect Heals any new models, those new models Heal at this point.
3. If any original model(s) had any Conditions or Tokens, one new model gains those Conditions at the same value (if any) and all Tokens. These Conditions, if gained during the End Phase, do not resolve their effects. Any Summon Upgrades Attached to any original model is Attached to that new model (if able); all other Upgrades are discarded.
4. If the new and original models belong to the same Crew, one new model becomes the target of any effects that targeted or chose any original models, such as Schemes, Leader designation, or lasting game effects. That new model is always considered a legal target for those effects.
5. Remove all original models from the game. If the new and original models do not belong to the same Crew, all original models are considered to be killed, ignoring Demise Abilities. No game effects (such as placing Markers or scoring points) occur from the original model being removed.
6. If any new model is at 0 Health, it is killed.
7. If any original model(s) had Activated, all new models are treated as having Activated; otherwise, new models are considered not to have Activated. If this Replace occurred during an original model’s Activation, one new model instead continues that Activation using any remaining Actions.
