"It is indeed true," wrote Renaissance printmaker Albrecht Dürer, "that art is omnipresent in nature, and the true artist is he who can bring it out."

Ask an Entomologist (bug biology specialist) to describe the anatomy of an insect, and you'll get the following reply: "Insects are made up of three parts: head, thorax and abdomen." Ask Tom Huck to imagine a bug and you'll get an unexpected and technically inaccurate answer. "Fiberglas, metal armor and a playground safe spring." Huck has designed two bug-like playground "springers" and a climbing apparatus based on a series of his original woodcut designs inspired by the many insects inhabiting the microenvironment of Laumeier Sculpture Park. Huck's first public artwork, these monumental insects illustrate how both nature and art, when experienced together and with a sprinkle of mischief, can inspire creativity and amusement in both children and adults.

Huck came to the sculptural designs by way of woodblock printmaking. This is a medium Huck mastered and gained notoriety for during a blossoming career with his company Evil Prints. Recently, Huck began displaying the woodblock relief used to make the print impression along with the final paper prints. The wood plates used to transfer ink from roller to matrix, then to paper have a strange, tactile, sculptural quality that is often as charming as the final product; this lead, by way of experiment, to the complete three-dimensional design of Laumeier's newest commissions Buzzer: Dottie and Whiskey the War Werm; woodblock prints come to life.

Like Albrecht Dürer's fantastical and entirely imagined armored Rhino skin in the world-famous woodcut Rhinoceros, 1515. Huck has recast the insect exoskeleton as an armored plate complete with carved swirls, coruscating contours and interlocking plates that would have impressed the eye of any medieval European prince ready to ride in to battle with enemy aristocrats or oppress rowdy peasants. This open treatment of "the idea" of a thing in distinction to the factual example is also in tune with the artistic imagination of Huck's art hero. Dürer.

Huck's anatomically incorrect insects carry something of the character of the bug into sculptural relief that transcends any mundane empirical observation. What are those characteristics? The bug is robust. If scaled up to human size, it would have an impenetrably thick exoskeleton that would act like military-grade Kevlar armor. Scientists suggest that cockroaches would be one of the very few species to survive thermonuclear war or an asteroid impact, so Huck's comparison to body armor is not in jest. The reinforced seat of Huck's bug rockers are robust enough to survive exuberant children climbing and bouncing back and forth, which is a close second in terms of the destructive potential of planetary implosion, as most experienced parents can attest.

A giant creepy crawler like Whiskey the War Werm, 2014, would also be incredibly mobile and able to carry heavy loads without breaking a sweat. Every flea jumps the scaled-down equivalent of the Empire State building in New York in every hop. A scarab beetle can roll the equivalent of 20 times its own weight in nutrient-rich dung without catching its breath (the humble scarab beetle also beat mankind to the wheel by millions of years). That's like a child picking up a Chevy truck. If blown up to our size, bugs would undoubtedly have super powers. This is where the spring in the tail of the bug comes into its own. It can withstand repeated fatigue and bounce right back into place.

Each work also has a face. Dottie's death's head design is reminiscent of the costumes worn by the Black Metal group Gwar, complete with fangs, mandibles and horns. The effect is a blend of the horrific and the slightly comic. Combined with the more biologically correct body designs, each sculpture is a visual portmanteau: part fantasy, part science. In this activity book are elements of each design such as mask cutouts, coloring in sections, puzzles, build your own bug and connect the dots. Each page of this interactive book refers back to the literary source of the sculptures that gives insight into the creative process and explores our relationship to the other species with which we share the land at Laumeier.

The artistic lineage of master printers like William Hogarth and Dürer had a didactic purpose, with their prints designed to disseminate information and educate a newly literate public. With Huck's commission, we are expanding Laumeier's focus on the intersection of art, nature and science to illustrate how, when experienced together, these disciplines can inspire creativity and critical thinking about our urban and suburban environments, to encourage curiosity in the natural world and inspire young artists. Children naturally learn best through direct, hands-on sensory experience. Huck's sculptures and whimsical book will bring that tangible quality to the fore.

Artist Biography:

TOM HUCK was born in 1971 in Potosi, Missouri. He received his MFA in Printmaking from Washington University in St. Louis and his BFA in Drawing from Southern Illinois University at Carbondale in 1993. Selected solo and group exhibitions include: St. Louis Art Museum; International Print Center New York; Kumu Art Museum, Tallin, Estonia; Contemporary Art Museum, St. Louis; Daum Art Museum, Sedalia, Missouri; Minneapolis Institute of Arts; Whitney Museum of American Art, New York; Milwaukee Art Museum; Jack S. Blanton Museum of Art, University of Texas, Austin; Biennale Internationale d'Estampe Contemporaine de Trois-Rivières, Quebec; Mesa Arts Center, Arizona; University of Windsor Gallery of Art, Windsor, Ontario; COBRA Museum of Modern Art, Amsterdam; Lamar Gallery, Loyola Marymount University, Los Angeles; University of Notre Dame, South Bend, Indiana; and the Pittsburgh Center for the Arts. Huck’s woodcut prints are included in numerous public and private collections, including: Fogg Art Museum, Cambridge, Massachusetts; Milwaukee Art Museum; Minneapolis Institute of Art; Nelson Atkins Museum of Art, Kansas City; New York Public Library; Spencer Museum of Art, Lawrence, Kansas; St. Louis Art Museum; and the Whitney Museum of American Art, New York. He is represented by Baer Ridgway Exhibitions, San Francisco; Sherry Leedy Contemporary Art, Kansas City, and David Krut Art Projects, New York. Huck resides in St. Louis where he owns Evil Prints, a studio where he produces his own woodcuts and offers printmaking classes.
