anthurium ®

changing the way people work

Company Overview

Innovative Technology for New Models of Work Collaboration

Anthurium Solutions, Inc.'s mission is to use our leading-edge technology to implement innovative, user-centric solutions to solve large scale problems at the intersection of "People & Work." We hold some of the earliest U.S. and foreign patents covering key aspects of workflow technology to enable scale, speed, and personalized user experience. Our solutions support new models of collaboration and connectivity in healthcare and beyond. Anthurium's innovative technology supports healthcare providers and delivery systems, payers, R&D organizations, entrepreneurs, and the food and drug retail industry.

Anthurium's unique value is the speed to results and cost savings that a customer can achieve using our turnkey, configurable, end-to-end platform solutions and tools for 1) condition management, 2) medication management, 3) patient-centered care, and 4) virtual work. Each of these solutions, or a combination thereof, can be configured to meet customers' proprietary brand, protocols, content, and workflow. Our intent is to offer customers a "solutions approach" so they can respond nimbly to regulatory and market forces with new solutions that can be scaled for greater impact at lower cost.

Turnkey, Configurable Solutions

Our Healthcare Solutions Platform & Engine (HSP&E) provides a comprehensive toolset of over 100 configurable modules to implement diverse approaches to treatment adherence, patient engagement, care coordination, and workforce innovation. We offer the HSP&E as a Platform as a Service (PaaS) for customers to leverage our Software as a Service (SaaS) solutions or deliver their own applications. Our SaaS solutions, built on the HSP&E, are:

- Pharmacy Outcome Enhancement Technologies™ (POET) for medication management
- Care in the Cloud (CitC) for condition management (diabetes)
- Patient-Centered Medical Home (PCMH) for patient-centered population management
- Community Collaboration Centers for business (C3b) for virtual work orchestration

Key Features

- **Patented Workflow Technology** configurable to customer protocols, content, and workflow for rapid implementation and results
- **Patented Matching Technology** to match work-to-worker to optimize results, better manage distributed workers, and connect clinicians and patients for trusted relationships
- **Supply Chain Management of Idle IQ™** to enable access to on-demand, distributed workers, giving them flexibility to work anywhere, anytime, thus unlocking their Idle IQ™
- **Service-Oriented Architecture (SOA)** with a suite of more than 100 software modules for work, health, and collaboration that can be configured to meet customer needs
- **Proprietary Methodology** to reliably design, build, and implement solutions in a HIPAA- and HITECH-compliant cloud environment
- **Powerful API and Backbone Capabilities** for integration of legacy systems and best of breed solutions
