SB 190

The electric grid is the backbone of Missouri's economy and by working together we can spur economic development as we build a smarter, stronger energy grid for Missouri consumers!

This is why we support making minor adjustments to our energy regulations. By making these small changes, Missouri can update 100 year-old policies, while boosting economic development, supporting our state's future energy needs and creating jobs by building the next generation of smart grid infrastructure. Additionally, for every \$1.00 invested in grid modernization, customers would receive a benefit/savings of \$2.40.

Further, a minor policy adjustment can unlock \$1 billion of additional infrastructure investment over the next five years. These investments will create more than 3,000 jobs and provide consumers and Missouri businesses a host of benefits and efficiencies. These benefits include smart grid technologies to improve reliability and prevent some power outages, and investments to further protect the grid from physical and cyber-attacks. In addition, updated policies will encourage cleaner and more renewable types of power, especially home-grown biomass; a fuel source which can boost the economy in rural Missouri.

Currently, SB 190, the Missouri Economic Development and Infrastructure Investment Act is consistent with this policy statement.

My company/association/organization supports this policy statement and by so doing, supports legislation that is consistent with this policy statement.
