AIRBORNE

THE NEW DANCE PHOTOGRAPHY OF

LOIS GREENFIELD
For more than twenty years, Lois Greenfield has been dazzling viewers with her spectacular photographs of modern and post-modern dance. The finest dancers in the world have performed for her camera, appreciative of her intuitive grasp of movement and her ability to transform it into pictures of great subtlety and beauty. Throughout the history of dance photography, few photographers have succeeded as Greenfield has in overcoming the formidable obstacles that stand in the way of creating images that do justice to the dynamism and grace of the dance. It is a measure of her success that her work is widely copied, though none of her imitators can rival her accomplishment.

In his preface, William A. Ewing, Director of the Musée de l’Elysée in Lausanne, Switzerland, takes us behind the scenes at Greenfield’s studio. In the accompanying captions, the photographer herself gives an illuminating account of the challenges she faced and overcame. Finally, William A. Ewing and Daniel Girardin, Curator at the Musée de l’Elysée, place Greenfield’s work within its larger context: the history of dance photography.

Following on the best-selling Breaking Bounds (Thames and Hudson, 1992), Airborne is sure to appeal to all dance enthusiasts, all students and practitioners of photography, and to everyone who finds joy in the strength and beauty of the human body.
With a Preface by William A. Ewing and a Critical Commentary by William A. Ewing and Daniel Girardin
The photography of dance goes back more than one hundred years, yet for all its bright, transcendent moments, there is some question as to whether it truly constitutes a tradition. A tradition implies a process of evolution, of continuity: for the photographer to snap the shutter, then design to remain on earth. Naively, I had assumed that I would be seeing such images in the flesh, as it were, the only difference being that these 'images' would be in color. I had forgotten the fundamental truth that all photographs 'lie'. It had not occurred to me that each 'shot', with its complex ensemble of movements and gestures, would be over and done with in a split second, and that the eye would never be able fully to take it all in.

As the dancers performed for each take, I could see nothing in front of me that remotely resembled a Greenfield image: all I saw were heavy, sweating bodies thudding about, the strenuous movements accompanied by sharp exhalations of breath as they landed. I watched the dancers repeat each take with minor variations according to Greenfield's directions but the eye would never be able fully to take it all in.

Suddenly she announced that the session was over; she had what she wanted. The moment the dancers' feet left the ground, she pressed the shutter release, fixed her gaze on the viewfinder, saw the image appear, closed the blinds, and pressed the shutter release again. The dancers' feet again touched the ground, and she stepped back to study the images. I was astonished to see the dancers' movements transformed, as if by magic, into a three-dimensional 'chaos' I had witnessed first-hand was transcribed on paper as coherent, ordered imagery. Greenfield's approach was therefore nothing like the act of straightforward 'reportage' I had naively assumed it to be, but was rather a complex refashioning of her 'raw material' - dance - into works of art in their own right.

Eventually our collaboration bore fruit, and the exhibition and book, Breaking Bounds, were produced in 1992. As I had hoped, Lois Greenfield was immediately recognized as a formidable photographer, and not just a skilled practitioner of one genre - the dance. But Lois has never been one to rest on her laurels, and the intervening years have been a period of intense work and tremendous creativity, to which Airborne, which features a selection from recent experiments and collaborations, bears witness.
in the air.

especially difficult for such talented performers; the challenge was in coordinating
imbus heal in a day or two, but beautiful pictures last forever.' The maneuver was not
I needed to take (we actually only shot a few 12-exposure rolls) because, as Chris says,

ANTIGRAVITY DANCE COMPANY NYC 1993
I always a lot of fun to be asked to solve the problem of how to illustrate a
concept with pure movement. This photo is from the advertising campaign 'Precision
Movements' for Raymond Weil Watches. I had some of my favorite gymnasts -
former competitive gymnasts who now have duplicate the moment
in the New York Times of one of his site-specific (i.e.,
outdoor) dances. He brought with him a section of an 800-

Claire McCardell's famous 'Letter to the World' photograph,
often tell you where the photographed movement came from. In this photo, however, the taut
fabric seems to suggest where the movement will go.

Costumes and fabric, as in the case of Barbara Morgan's famous 'Letter to the World' photograph,

I invited Sham to come to the studio after I saw a photo
in the New York Times of one of his site-specific (i.e.,
outdoor) dances. He brought with him a section of an 800-

When I first photographed Darren when he auditioned for eliot Feld's New Ballet
School (now called Ballet Tech) in 1979 when Darren was ten years old. Eliot
created the school twenty years ago to locate and nurture children in the new
York City public school system who have a gift for dance. Darren later
joined the Fol Ballet, now known as 'Ballet Tech,' becoming one of the
company's leading soloists and ballet master.

I was on assignment from the Village Voice to photograph Margarita's current programme.
When I showed her the first Polaroid from the dance Concerta, she declared the moment 'an accident', which would never happen again. The picture here is the closest we could
get to duplicating the initial 'mistake', where, due to the dancers' position, their torsos
and hands disappeared in such a way that there was no trace of the bodies attached to
the legs. The fact that we couldn't duplicate the moment exactly pleased me because
it confirmed the uniqueness of every photograph.

11. Lynn Aaron, Jeffrey Neck Common Ground
BALLET TECH (Director: Eliot Feld) 1991
This is a literal choreographic moment from Common Ground. As usual, I photographed this piece without seeing it beforehand.
When I did see it on stage, after living with the photo for a long time, I couldn't believe how fast that moment went by.

12 Bronwen MacArthur, Lewis Bassing Landings
GINA GIBNEY DANCE 1993

The day I shot this, we were concentrating on counterbalance and weight-sharing moments. The ideas
for these improvisational sessions come very well while we are working. By the time we wait thirty seconds to see a Polaroid of one idea develop, we are already trying something else. Sessions like these develop a momentum of their own that seems to carry us along. Adam likened the experience to 'being possessed by something with wings that is headed for a flame.' After what seems like a brief moment, everything crashes to the floor in a heap of costumes and ashes and one remembers almost nothing.'

20 Paola Styron Guardian Spirit from *Moonskin*
Masks by Robert Faust  FAUSTWORK MASK THEATER 1993
I first worked with Robert when he was a member of Pilobolus. After seeing Robert and Paola perform with their masks at a Friends in Deed AIDS benefit, I invited them to come to the studio. Robert brought a lot of masks, all of which he had made. Paola usually performs this character of a guardian spirit in black clothes and a hood. I mostly avoid costumes, preferring the abstraction of an almost naked body. As a result of these photos, they now often perform *Moonskin* without clothes.

17 Margie Gillis 1995
Margie's costumes always take on a movement dynamic of their own. In this case the force of Margie's legs thrown into the air must have sent her dress all the way to the other side, giving the illusion that the dress was solid and was supporting her one-armed handstand.

18 Ashley Roland 1994
The strip of mylar in which Ashley has coiled herself has become a staple studio prop which I use to reflect, distort or erase. This was the first time we decided to bend the mylar and have Ashley use it not only as a prop, but as a partner.

24 Andrea Weber *Dianna and the Moon* (Choreographer: Suzie Scher) 1991
It wasn't easy to get Andrea to stay balanced, with most of her weight over on one side of the ball. She is actually being supported by her brother, who is clapping her hand and crouching behind the ball. This image is my only nude.

16 Denise Vale
MARTHA GRAHAM DANCE COMPANY 1994

26 Robin Shervitz, Russell Aubrey
CAROLYN DORFMAN DANCE COMPANY 1995

21 Ashley Roland 1995
I wanted to create a dark powder counterpart to the shots of Sham Mosher taken with the flour (plates 9 and 58). The cocoa didn't pour as well as the flour and sugar mixture, so we used the cocoa as a costume for Ashley. We were vacuuming cocoa dust off the floor for weeks after the shoot.

22 Geralyn DelCorso
*Frets and Women* BALLET TECH (Director: Eliot Feld) 1992

28 Darren Gibson, Patricia Tushill
*Asia* BALLET TECH (Director: Eliot Feld) 1996
In this shot, we exaggerated the gestures, as we usually do, so they will make a more exciting still image. I always try to stretch the 'moment' to the last fraction of a second (before the dancer falls out of position), to avoid the picture looking posed.

19 Ashley Roland 1995
We set up the mylar strip vertically on top of the black background paper and tipped it to elongate only Ashley's legs, blacking out the area of the studio that would have been reflected in the mirror.

25 Gail Gilbert *Cirrocumulus* 1993
Gail is the third generation of dancers with whom I have worked. In the early 1970s I was cutting my teeth on classic modern dance companies such as Paul Taylor. In the early eighties I started my very influential collaboration with one of Taylor's main dancers, David Parsons. In the nineties I am working with one of David's descendants who is now doing her own work. Here we are playing with a simple, sheer scarf which the two use in a series of dances based on cloud formations.

27 Jude Woodcock, Rebecca Jung Duet 92
PILOBOLUS 1992

23 Geralyn DelCorso
*Frets and Women* BALLET TECH (Director: Eliot Feld) 1992
Unlike most ballet choreographers, Eliot enjoys transitional movements. We really 'stretched' this moment to accentuate the feeling of being anchored and trying to pull away.

30 Robert Faust, Paola Styron
MESSAGES FROM *MOONSUN* 1993
Ashley Roland 1995

29 Morgan Keller, Arthur Aviles 1994
Arthur added so much energy and creative ideas to all my sessions with the Bill T. Jones/Amie Zane dance company that I was very excited to work with him after he went on his own. He brought a friend, Morgan Keller, with him and we played around with no set plan in mind. When I look at the picture now it reminds me of an Italian Renaissance sculpture of a mythological 'rape' scene.

26 Robin Shervitz, Russell Aubrey
A Fork in the Road

31 Morgan Keller, Arthur Aviles 1994
Arthur added so much energy and creative ideas to all my sessions with the Bill T. Jones/Amie Zane dance company that I was very excited to work with him after he went on his own. He brought a friend, Morgan Keller, with him and we played around with no set plan in mind. 28 Darren Gibson, Patricia Tushill
*Asia* BALLET TECH (Director: Eliot Feld) 1996
In this shot, we exaggerated the gestures, as we usually do, so they will make a more exciting still image. I always try to stretch the 'moment' to the last fraction of a second (before the dancer falls out of position), to avoid the picture looking posed.
Ashley Roland 1991

I first met Jack when he was dancing in ISO with Ashley Roland and Daniel Ezralow. I was asked to give a workshop in 1992 for the Antigravity Dance Company, for which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley's gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

46 Kathy Thompson 1996

This was from my second session with Kathy, who was working in Switzerland at the time. While she was on tour in the States, she spent a day in New York so that we could work together. Kathy is a wild woman who does amazing, non-repeatable movements. In the contact sheets I was struck by how long her arms and legs looked. I could take a picture of me. To our surprise, we could barely see her camera, just its flash.

47 Darren Gibson Eve BALLET TECH (Director: Eliot Feld) 1991

When I work with commercial clients, they usually look at works I’ve done for myself and ask me to build on the concepts or imagery for an advertising campaign. In this case it was the other way round. I had photographed a campaign in colour for Sydkraft, a Swedish energy company, where I illustrated their concept of not seeing the wood for the trees by wrapping Ashley in green silk and tying the scarf around her face. Ashley and I saw rich potential in this idea so she came back another day to fool around with the leftover prop which we shredded into strips.

52 Ashley Roland 1995

This company members Oselia (Choreographer: Lee Harris, Moses Pendleton, Jonathan Wolken, Bobby Barnett) PILOBOLUS 1992

I've worked with Andrea and her brother Robert since I photographed him in 1990 as part of a workshop I was giving in Aspen, Colorado. They were actually the first gymnasts with whom I had ever worked, and luckily for me they were also dancers. Robert and Andrea communicate with one another without speaking. After working with me a lot over the years, Andrea can almost intuim what I want without my giving her direction.

53 Ashley Roland 1995

by hanging two very narrow vertical banners side by side along Michigan Avenue. We are therefore always looking for ways to photograph the dancers as ‘narrowly’ as possible.

51 Ashley Roland 1995

I've worked with Andrea and her brother Robert since I photographed him in 1990 as part of a workshop I was giving in Aspen, Colorado. They were actually the first gymnasts with whom I had ever worked, and luckily for me they were also dancers. Robert and Andrea communicate with one another without speaking. After working with me a lot over the years, Andrea can almost intuit what I want without my giving her direction.

39 Flipper Hope, Jack Gallagher, Daniel Ezralow, Ashley Roland

For Raymond Weil Watches 1993

This shot, also for Raymond Weil, is one of a genre we call ‘explosion shots’ which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley's gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

40 Muriel Maffe, Ashley Wheater, Jais Zinoun

Aurora Polaris (Choreographer: Helgi Tomasson) SAN FRANCISCO BALLET 1993

This is one of fifty shots from a commercial which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley's gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

41 Company members Ludwig Gambit

BALLET TECH (Director: Eliot Feld) 1995

This is one of fifty shots from a commercial which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley's gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

42 Darren Gibson and Company Eve BALLET TECH (Director: Eliot Feld) 1991

By transforming the ordinary, Ashley can bring a new twist to just about any situation.

38 Andrea Weber, Chris Harrison, Andrew Pacho, Harrison Beal For Raymond Weil Watches ANTIGRAVITY DANCE COMPANY NYC and Andrea Weber 1993

It was Andrea who introduced me to the Antigravity company. Together we executed this pinwheel shot for the Raymond Weil watch campaign.

43 Ashley Roland 1991

For Raymond Weil Watches 1993

I photographed this in 1991 as part of a workshop I was giving in Aspen, Colorado. They were actually the first gymnasts with whom I had ever worked, and luckily for me they were also dancers. Robert and Andrea communicate with one another without speaking. After working with me a lot over the years, Andrea can almost intuit what I want without my giving her direction.

50 Joseph Mooradian HUBBARD STREET DANCE CHICAGO 1994

Every year Hubbard Street advertises its season in Chicago by hanging two very narrow vertical banners side by side along Michigan Avenue. We are therefore always looking for ways to photograph the dancers as ‘narrowly’ as possible.

51 Ashley Roland 1995

I was struck by how long her arms and legs looked. I could take a picture of me. To our surprise, we could barely see her camera, just its flash.

52 Ashley Roland 1995

This is my only photograph of Ashley that actually comes from a choreographed dance. Motorella is about a modern-day Cinderella. It is set in Detroit, Michigan.

54 Jack Gallagher, Linda Sastrandradjo 1992

I was asked to give a workshop in 1992 for the International Center of Photography in connection with my ‘Breaking Boundaries’ exhibit, and I decided to use that as an opportunity to work with Jack and Linda. We weren't trying to create preconceived imagery, but because someone once called this photograph ‘Adam and Eve’, that is what it has signified for me ever since.

55 Ashley Roland, Kent Lindemer, John Marie Sevilla, Sebastian Smeureanu Oselia (Choreographers: Lee Harris, Moses Pendleton, Jonathan Wolken, Bobby Barnett) PILOBOLUS 1992

This group shot the dancers are doing a trademark Ringside move called ‘around the world’, in which they spring off the floor, do a 360-degree flip and land on their stomachs, making a perfect circle with their bodies. Normally, the dancers perform this maneuver from different angles, but I wanted to stack them up so they would become a many-legged creature. Elizabeth is not concerned with disguising gravity. In performance her dancers land with groans and a thud, amplified by mikes for the benefit of the audience. At least I gave them a mat to land on!

48 Arthur Aviles 1993

I was struck by how long her arms and legs looked. I could take a picture of me. To our surprise, we could barely see her camera, just its flash.

49 Gail Gilbert Cirrus 1993

Gail has choreographed a series of dances with diaphanous fabric, called Cirrocumulus Ungulates, in which she explores the representational and metaphorical potential of the fabric. Cirrus are clouds that do not lead to rain but often indicate the location of a distant storm. Gail likes to think that the scarf is an extension of her skin and that it makes her jump look more like a cloud.

37 Company members Oselia (Choreographers: Lee Harris, Moses Pendleton, Jonathan Wolken, Bobby Barnett) PILOBOLUS 1992

This shot, also for Raymond Weil, is one of a genre we call ‘explosion shots’ which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley's gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

44 Desmond Richardson COMPLEXIONS 1995

Desmond was a lead dancer with Alvin Ailey and now has his own company, Complexions. During this improvisation session we wanted to capture the simple beauty of his form.

45 Ashley Roland 1997

When I work with commercial clients, they usually look at works I’ve done for myself and ask me to build on the concepts or imagery for an advertising campaign. In this case it was the other way round. I had photographed a campaign in colour for Sydkraft, a Swedish energy company, where I illustrated their concept of not seeing the wood for the trees by wrapping Ashley in green silk and tying the scarf around her face. Ashley and I saw rich potential in this idea so she came back another day to fool around with the leftover prop which we shredded into strips.

51 Ashley Roland 1995

I was struck by how long her arms and legs looked. I could take a picture of me. To our surprise, we could barely see her camera, just its flash.

52 Ashley Roland 1995

This is my only photograph of Ashley that actually comes from a choreographed dance. Motorella is about a modern-day Cinderella. It is set in Detroit, Michigan.

53 Ashley Roland 1995

This shot, also for Raymond Weil, is one of a genre we call ‘explosion shots’ which I developed with Daniel, Ashley and the ISO Dance Company. Danny had brought unbridled energy and his crazy spirit to our many photo sessions throughout the years. Ashley’s gymnastic background helped her jump off her supporting arm. This shot is basically a chaotic situation which miraculously coheres at one particular split second.

46 Kathy Thompson 1996

This was from my second session with Kathy, who was working in Switzerland at the time. While she was on tour in the States, she spent a day in New York so that we could work together. Kathy is a wild woman who does amazing, non-repeatable movements. In the contact sheets I was struck by how long her arms and legs looked.
55 Gail Gilbert 1993
For this photograph, Broncolor (who manufacture my strobes) suggested we try their Satellite Reflectors. We wanted to throw Gail into silhouette and have the scarf be like a layer of skin. To me, she seems to be turning into an animal before our eyes.

62 Sham Mosher 1997
We wrapped Sham in a piece of clear plastic which we shaped into a cone. I wanted him to look as if he were contained by, and at the same time emanating from, a ray of light.

56 Arthur Aviles 1996
I wanted Arthur to look like a metaphorical birdman, so we not only glued feathers on him but tossed them in the air as well.

63 Kathy Thompson, Gerald Durand
LES NOMADES 1995
I photographed this in Vevey, Switzerland, where I was giving a workshop for Broncolor.

57 Ashley Roland 1995
This is another in the cocoa series. We sprinkled Ashley’s back with cocoa before every jump and I timed the shot to when the cocoa flew up.

58 Sham Mosher 1995
We used the same mixture of flour and sugar as in plate 9. We found one jump that work and Sham repeated it many times, thevari being the rate and amount of flour falling on it.

64 Daniel Ezralow, Ashley Roland 1888
Ashley and Danny were trying to see how close they could get to one another in full flight without colliding.

65 Demetria Klein, Patrick Rydel
DEMETRIJUS KLEIN DANCE COMPANY 1992
I photographed this in Vevey, Switzerland, where I was giving a workshop for Broncolor.

59 Flipper Hope 1994
Ashley Roland 1995
I love to make it seem as though an invisible force has blown the dancers and the props apart.

60 Didier Silhol 1995
This photo was taken in Paris during the filming of a documentary on style. In those days he used to just throw himself around in the studio and we’d get wild and crazy results. Now, when Dave comes in, even just to play, I get the feeling that he has thought long and hard about the shapes he is making with his body. He has a whole movement vocabulary for himself and his dancers.

66 David Gomez, Jennita Russo
UURB STREET DANCE CHICAGO 1995
One of the strengths of this company is their creative ability to improvise.

7 Mia McSwain, Gail Gilbert, Patricia Ann Kenny
THE PARSONS DANCE COMPANY 1996
This was originally shot in color (and converted to black and white) for the Women’s Fashion Supplement of the New York Times Sunday Magazine. Usually I don’t fuss with hair and make-up when I shoot, and I like to keep clothing as simple as possible, but in this case the hair extension added movement to the shot, and Gail’s hair was gelled in that position - something I had never done before. What I really love, besides the flowing quality, is Patricia’s strong horizontal.

61 Ashley Roland 1997
I love to make it seem as though an invisible force has blown the dancers and the props apart.

69 Jack Gallagher, Linda Saxradipadja 1992
I wanted Linda to look as if she were literally Jack’s shadow up in the air, so we made sure no light fell on her. She is much smaller than he is but we still had to put her way back to make her look even tinier and further away.

70 Dave Parsons, Gail Gilbert Bachiana
THE PARSONS DANCE COMPANY 1994
Dave says this is a signature move from what he calls his ‘Classicism’. When I first photographed Dave in 1982, he was still a member of the Paul Taylor Dance Company and had yet to develop his own choreographic style. In those days he used to just throw himself around in the studio and we’d get wild and crazy results. Now, when Dave comes in, even just to play, I get the feeling that he has thought long and hard about the shapes he is making with his body. He has a whole movement vocabulary for himself and his dancers.

71 Robin Branch, Leajato Amara Robinson 1996
For this photograph, Broncolor (who manufacture my strobes) suggested we try their Satellite Reflectors. We wanted to throw Gail into silhouette and have the scarf be like a layer of skin. To me, she seems to be turning into an animal before our eyes.

72 Andrew Pacho, Kim Anthony Hamilton
ANTIGRAVITY DANCE COMPANY NYC 1992
Pacho (and Chris Harrison of Antigravity) are so full of creative ideas that I sometimes have to put my foot down and say: ‘No new ideas!’ They are also ingenious at figuring out how to do, or how to coax others to do, the impossible things I often ask of them.

73 Rika Okamoto, Kathy Bucellato, Camille M. Brown 1996
These three young women, who were then with the Martha Graham Company, came in for an improvisational shoot after I had photographed them for the company.

74 Hope Clark, Albert Elmore Jr., Matthew Stromberg
STREB/RINGSIDE 1996
I didn’t cut off Matthew’s head on purpose in this shot. We just put different together different moves that we liked from various Polansis we had taken. Matthew has told me that in performance one tries above a fear of the physical danger involved and is carried through by the progression of the choreography. In the studio, where each move is taken out of context, the dancer has to psych him or herself up for each individual maneuver.

75 Flipper Hope, Andreas Bjornoebo, Stephen Choiniere 1997
This was part of a series of photos I created for Tipness Health Clubs in Japan. To my client’s amazement we produced ten different configurations in one day. Of course, working with a longtime collaborator such as Flipper, whose energy galvanizes everyone in the room, made the task easier. And new faces such as Stephen brought unexpected twists.

76 Nadine Mose, David Brown, Emmanuelle Phouon, Christian Canciani
Based on Mandeville…La Vie Continue
ELISA MONTE DANCE 1994
Different moments of the dance were fused into one frame, in the hope of conveying the work’s overall feeling.

77 Rika Okamoto, Kathy Bucellato, Camille M. Brown 1996
These three young women, who were then with the Martha Graham Company, came in for an improvisational shoot after I had photographed them for the company.

78 Eli McAfee, Albert Elmore Jr., Hope Clark, Matthew Stromberg, Lisa Dalton
STREB/RINGSIDE 1996
Elizabeth Streb has eliminated a perspective based on vertical bodies. Although the dancers look as though they are coming forward, they are not. They are jumping up and making a table’, another signature Ringside move. I caught them on the way up, before their bodies form a horizontal plane and before, ultimately, they land on their stomachs.

79 Ned Mahul, Christopher Batenhaert, Paula Gi如今Walf/Line
STREB/RINGSIDE 1994
The dancers are running sequentially headlong into the wall. The first person is held up by the pressure of the second body. The third guy has to grab the top of the wall across the width of the two bodies. The moment I shot is when the outside man, Ned, just lets go from the wall.
Lois Greenfield is the most innovative and prolific photographer of contemporary dance. Her style is widely copied, though her imitators, lacking her acuity, inevitably fall short of the mark. She is rightly admired for her original achievements in a field which, in spite of continual technical advances, still presents formidable challenges. If her earliest work was characterized by some uncertainty, as she struggled to come to terms with the central paradox of dance photography - how, in a still image, to make the dance move - she can today take pride in an oeuvre of remarkable quality, consistency and depth. This is due in no small measure to her understanding of modern and postmodern dance principles, absorbed over twenty years, as well as to her total mastery of her own medium: photography. This dual facility sets her apart from the mass of her competitors who are proficient in photography but remain relatively unschooled in the nuances of choreography.

By definition ephemeral, dance is an art which accommodates itself with great difficulty to photography. While it is always possible to make striking imagery of dancers in motion (magnificent leaps with outstretched limbs are inherently photogenic), the overall design - that is to say, the choreography - is all too often overlooked or, worse, misrepresented. A human body in dance is not simply an object positioned in space, but an object in flux, moving from one place to another according to a specific plan. Relations between dance and photography are therefore necessarily problematic, because the dancer's movements, charged with this larger meaning (the choreography), must nonetheless be distilled into a single image (or a few such images) at the expense of the whole. On the other hand, this process of distillation can also be the source of inspired imagemaking, as Greenfield's work makes clear.

Photography, the invention of which was announced to the world in 1839 after years of experimentation led by Niépce, Daguerre and Talbot, was the fruit not only of that research but also of inventions, theories and discoveries dating back to the Renaissance. In this sense photography was a belated offspring of Renaissance culture, adopting its camera obscura and adhering to its perspectival system and classic single point of view. Photography's initial impulse, understandably, was to arrest time, to freeze the image in the mirror (in its early days photography was often described as the mirror of nature), not to create images in which the subject seemed to be in motion. Movement would only begin to interest photographers several decades later, when mirror-like fidelity had lost its power to enthrall. In any case, it was impossible in photography's early years even to show a moving object or person with any clarity whatsoever. For instance, the only people seen on city streets in the first photographs just happened to be standing stock still long enough to have their presence registered, and even that
presence is illdefined, ghostlike. Even studio portraits of sitting people required head
and arm rests to keep the body sufficiently still during long exposures. Only when
photographic imagery had become a matter of routine did the public manifest its
frustration with stillness, and only then did photographers begin their quest for an
image which would convey a convincing sense, or illusion, of movement.

Throughout most of the nineteenth century, therefore, the photography of dance was
simply inconceivable. The romantic ballet was fully mature and enjoying its golden age
before the words ‘photography’ and ‘photographer’ were even invented. A decade after
Daguerre and Talbot had published their methods of permanently fixing a photographic
image, photographers were unable to produce a clear picture of a moving subject, let
alone to represent anything as complex as the ballet. The most daguerreotypic, for
example, could offer the dance world was the posed studio portrait, and even this
was designed to remain a rare and expensive gift (for a wealthy patron, for example)
since the daguerreotype was one-of-a-kind. Even when, in the 1850s, the tiny cartes
de visite eventually made photographic imagery of ballet stars available to the masses,
this imagery was still in the form of portraiture. If, very occasionally, a ballerina was
photographed pretending to hold a position, the photographer’s objective remained
celebrity portraiture rather than the convincing balletic moment. The latter task was
left to lithographs which, having originated as drawings, could give free rein to the
imagination and thus portray the ethereal spirit of the ballet (for example, ballerinas
were shown floating among the clouds). When, very rarely, a photographer strove for
something more than a demure posed portrait, the long exposures required dancers
to be held in the air with cables (the chicanery later erased - retouched out - on
either the negatives or prints). But if, to our eyes, both the portraits and the more
ambitious attempts to evoke the dance resulted in stiff imagery which parodies the
cults of grace and effortlessness which the dancers strove to portray on stage, it must
be said that nineteenth-century viewers were more than content to have mirror-like
images, photographers were unable to produce a clear picture of a moving subject, let
alone to represent anything as complex as the ballet. The most daguerreotypic, for
example, could offer the dance world was the posed studio portrait, and even this
was designed to remain a rare and expensive gift (for a wealthy patron, for example)
since the daguerreotype was one-of-a-kind. Even when, in the 1850s, the tiny cartes
de visite eventually made photographic imagery of ballet stars available to the masses,

be said that nineteenth-century viewers were more than content to have mirror-like
representations of celebrated prima donnas whom they had otherwise only heard about
Perhaps the best: that can be said today of all these early efforts is that they represent a
kind of proto dance photography: since their subjects were always required to remain
completely motionless, no trace of the controlled energies unleashed by the bodies in
real dance could be registered.

This is not to say, however, that no advances concerning the photography of dance were
made in the nineteenth century; it was simply that they were indirect contributions. The
American Eadweard Muybridge and the Frenchman Jules-Etienne Marey devised
photographic techniques for breaking down and analysing the mechanics of human
and animal movement. Both men were fascinated by the limitations of the human
eye, and were convinced that reality did not conform to human perceptions of it,
perceptions which had been channelled by misleading artistic convention. Muybridge’s
photographic splintering of movements and gestures and Marey’s presentation of the
continuity and coherence of animal and human locomotion.

Muybridge was encouraged by physicians to devise better means of repairing muscle and bone, and armies to develop better marching techniques. The modern science of ergonomics was born of this knowledge. The most sensational single finding of all was, of course, Muybridge’s sequence of a horse at gallop, which had until then been represented erroneously in art, the human eye never having been able to grasp the fact that the four feet of the animal were off the ground at one time. The shock of discovering that this was indeed the case did much to publicize both Muybridge’s and Marey’s findings, and forced artists to take a second look at all the conventions relating to the depiction of humans and animals in motion. To this would include painted, drawn and photographed renderings of the dance.

Expressive dance photography (such as we have today) has its roots in a fin-de-
siècle international style and movement called Pictorialism. Pictorialists had artistic
ambitions for photography, which had hitherto, in their eyes, worn the disreputable
mantle of commerce. One strategy towards this end was to print photographs in ways
that resembled as closely as possible the fine (that is, respectable) arts. Another tactic,
albeit unconscious, was to photograph highbrow subjects. Thus the dance became a
popular Pictorialist subject, whether in the form of classical ballet or in the form of
avant-garde activity represented by Isadora Duncan, the Ballets Russes and Ruth St.
Denis, among others. Now the focus was on the spirit of the dance rather than on its
celebrated performers, and this goal demanded elegant and convincing illusions of
movement.

There were substantial Pictorialist accomplishments in this regard. Thus, Arnold Genthe produced some magnificent photographs of Isadora Duncan and her pupils
performing outdoors. He also made one rather sombre study of Anna Pavlova actually
performing on stage, which is, to my mind, the first true dance photograph. But
the fact remains that, with this exception, technical obstacles continued to prevent the
Dance photography in this latter sense really begins in the 1930s, when the availability of fast films, light meters and electronic flash finally allowed imagemakers to freeze a given split-second of dance action while rendering the performers clearly. What is surprising is how few photographers chose to exercise these options. The portrait-style remained the norm throughout the 1930s and 1940s, practised by accomplished professional photographers like George Hoyningen-Huene, Edward Steichen, Horst P. Horst or James Abbe. Sometimes this portraiture was merely a convention (or a consequence of public demand, since fashion magazines like Vogue and Vanity Fair paid handsomely for such pictures); at other times it was a matter of exercising total aesthetic control. Hoyningen-Huene, for example, evoked classical Greek dance by having his dancers lie on the floor with the camera overhead, the better to arrange the folds of the dresses precisely as in classical Greek sculpture; had the dancers actually been in motion, the fluid veils and dresses would never have conformed precisely to his stylized design. George Platt Lynes, justly celebrated for his magnificent photographs of Balanchine’s ballets, also chose to work in the static manner, painstakingly posing and lighting the dancers to compose exquisite tableaux of perfect dance moments.

But a few photographers continued in the Arnold Genthe, or ‘real time’, tradition. The well-known graphic designer Alexey Brodovitch made a virtue of technical limitations, employing slow and contrasty film to photograph the dancers of the Ballets Russes de Monte Carlo as blurred and shadowy ciphers. At the other end of the spectrum, the photojournalist Gjon Mili used the strobe, newly invented by Harold Edgerton, to freeze with spectacular clarity an exuberant instant in the Lindy Hop, and to analyse, in Marey-like style, a complete pas de bourrée as danced by Nora Kaye. And Barbara Morgan, who entered into a fruitful creative partnership with Martha Graham, settled upon a spontaneous, almost ‘reportage’ approach to photographing the dancer which was brilliantly suited to Graham’s expressive emotional style. The collaborative War Theme (1941) was a milestone in dance photography because the piece had been designed for the stage rather than with the needs of the photographer in mind; it was impossible to ask that a particularly photogenic moment be repeated until the photographer was sure she had it on film; the angle of view and the distance from the dancer was impossible to arrange; the action on stage were prescribed; and, lastly, sets and decor which worked well on stage could be extremely distracting when they appeared fragmented in the backgrounds of photographs.

Meanwhile, Robert Wilson’s The Life and Times of Joseph Stalin opened her eyes to the potential of avant-garde theatre. Greenfield’s interests meshed well with the prevailing spirit in contemporary dance, which identified with experimental tendencies in painting, sculpture, conceptual art, film and theatre rather than with the ballet. The notion of space itself was questioned across the spectrum of the arts: artists rejected the principle of a single, fixed point of view for any artwork, and choreographers questioned ‘the stage’ as the sole rightful performance site. Working with Paul Taylor, Laura Dean and Twyla Tharp, among others, Greenfield realized that a whole new vocabulary and grammar of dance was evolving, and that New York City was at the very centre of this experiment. Soon she had convinced her editors at the Village Voice to run her pictures alongside their regular dance reviews. It would prove a long-lasting alliance.

But it was not long before Greenfield tired of reportage dance photography, meaning the kinds of pictures taken during actual performances or at rehearsals. She realized that such photographs could at best be only pale documents of onstage reality. Furthermore, too many constraints limited the photographer in such situations: lighting effects were designed for the stage rather than with the needs of the photographer in mind; it was impossible to ask that a particularly photogenic moment be repeated until the photographer was sure she had it on film; the angle of view and the distance from the dancer was impossible to arrange; the action on stage were prescribed; and, lastly, sets and decor which worked well on stage could be extremely distracting when they appeared fragmented in the backgrounds of photographs.

Greenfield’s solution was to acquire her own studio, where she could exercise sufficient, if not absolute, control over these considerations. Here she could focus all her energies on a certain dancer or group, while they could in turn concentrate on what was development of a true dance photography - that is, moments actually seized from the flux.
demanded of them by the photographer. It was her métier to produce dramatic and original imagery for myriad dance companies, choreographers and performers who were part of the New York City dance world or merely passing through. Week after week, for more than twenty years, dancers and choreographers of every stripe have stopped by her Lower Manhattan studio to leave a permanent visual record of their otherwise ephemeral art.

This record consists of several different kinds of image. In addition to the ‘journeyman’ genres (that is, those images meant to serve for publicity and promotional purposes, as well as historical records), Greenfield developed others. In sum, there are six distinct genres, and it is important to distinguish between them.

First, there are photographs in which Greenfield attempts to capture the essence or spirit of a particular dance rather than depict a specific movement or gesture visible in the stage performance. Example: plate 20.

Second, there are efforts to seize a literal choreographic moment from a specific dance - that is, something very similar to what would actually be seen in the theatre. Example: plates 5 and 6.

Then there are photographs in which Greenfield attempts to capture the essence of a choreographer’s style rather than represent a specific dance. Example: plate 13.

Fourth, there are photographs in which Greenfield tries to portray the unique attributes, or style, of a particular dancer. Example: plate 44.

Fifth, there are situations in which Greenfield herself starts out with a preconceived idea in her mind. Example: plate 9.

Finally, there are experimental sessions in which both Greenfield and her dancers improvise, allowing their imaginations completely free rein. With some of these sessions lasting as long as eight hours, there is enough time for both parties fully to investigate the potential of new movements, gestures or group dynamics. Example: plate 78.

Fundamental to each of these approaches is the use of the square format, in which the image is bounded on its four sides by the black borders which represent the camera frame. Unlike the theatre stage, where the horizontal (that is, gravitational) element dominates, and the vertical dimension represents only momentary escape, the square frame equates the horizontal and vertical vectors: freed of gravity, so to speak, the dancers float, fly and hover. (This is, of course, by no means the only distinguishing mark of a Greenfield image. For a fuller analysis, see Breaking Bounds: The Dance Photography of Lois Greenfield, William A. Ewing, 1992.)

Considered in its entirety, this vast archive of modern and postmodern dance imagery would alone have earned its creator a special place in the history of dance photography. What makes her contribution all the more interesting, and important, however, is Greenfield’s refusal ever to be satisfied with those métier aspects of her work. As her vision matured, she came to see the dance rather as a landscape - that is, though it was undoubtedly beautiful and varied in itself, it was, from another point of view, merely raw material. Thus, she would ask her dancers to ‘leave their choreography at the door’, so that she and they could strive together for something original: a synthesis of dance and photography which put the two arts on an equal footing. It is within this ambitious enterprise that the photographer has obtained her greatest pleasure and her finest results.
ACKNOWLEDGMENT

Many colleagues and friends have provided help and inspiration for my second book of dance photographs. Firstly, of course, I must thank the immensely talented dancers and choreographers with whom I have had the privilege of working; their enthusiasm and creativity have been the catalyst for my own creative process.

I am also, once again, deeply indebted to Bill Ewing for his discerning selection of my images and for the imaginative structure he devised in which to present them.

In my studio, Jack Deaso has been my creative partner since 1983 and has brought his talent, generosity and humor to all our photo sessions. I have been very lucky to have had such an encouraging and loyal friend. Thanks, Jack.

No photographer can ever have had a better team. Ellen Crane and Douglas Dugan have contributed in countless ways to the success of so many projects, both in the office and on the set. Jamie Perlmutt has made the most beautiful prints of my work, including all the prints in this book. Marsha Pinkstra always offers me constructive criticism. Even the newest members of our studio family, David Loeb and Sean Gulls, have worked hard behind the scenes, doing whatever needed to be done.

Pietre, Claude and Claude Bron of Bron Electronik have helped me to solve the important technical problems that arise from photographing dancers moving at high speeds. Without the short flash duration of their strobe units, I would be unable to capture as sharply the moments I search for. The personal attention they give me has been much appreciated. Thanks are also due to Mark Rezzonico of their New York office.

I have worked with Hasselblad cameras since 1982 and their effect on my photographic vision has been dramatic. Their fine instruments provide the resolution and sharpness I think essential to my work. Skip Cohen, Tony Corbell and Ernst Wildi of Hasselblad, New York, have been great troubleshooters.

Finally, I want to thank my husband Stuart Liebman and my sons Alex and Jesse for the pride they take and the love they give.
