### To Whom It Concern

Bhutan is a small land locked country in the Himalayas. It has a functional 3 tier Primary Health Care System covering 90% of the 700,000/- population despite challenges like financial and Human Resources and the mountainous terrain. Health care including Health Promotion, disease prevention, curative care and Rehabilitation are provided free by the Government to its people.

Bhutan is now geared towards reaching health services to 10% of its population and improving the quality of health service. To achieve the objective, we face numerous challenges including financial resources to procure advanced medical equipments. Requirements are two CAT Scan Machines, one Mammography Machines and Ultra Sound Machines and Laboratory Analyzers (Biochemistry, Hematology, Immunology, Histo-Chemistry Machines) etc. Any support from Industries, Universities, Projects and Organizations outside Bhutan to meet the above objectives will help us in providing better health care to Bhutanese population.

Any such support to above could be routed through Dr Robert C Morrow, Erik J Blutinger, Dasho Kado and Ian Barrows of USA.
